Signature _____

X-Rays by Complaint

Arthritis Rotator Cuff Tear (first visit only) Shoulder Pain	Arthritis series (Axillary, Grashey, and Template of Shoulder)
Clear History of: Instability Bankart lesion Hx of dislocation "shoulder keeps coming out of joint" If not clear - Arthritis Series	Instability Series
Anything about elbow	Matsen series - 4 view Elbow
True fracture of Humerus	AP and Lat of Humerus
AC separation	AC Series Bilat with and without weights
SC separation	Serendipity View AP SC Joint
When in doubt	Arthritis series (Axillary, Grashey, and Template of Shoulder)

X-Rays by Series

Arthritis series

Most patients need a three view arthritis series (Axillary, Grashey, and Template of Shoulder).
Indication: Arthritis, Rotator Cuff Tear (first visit only), Pain

Instability Series

If patients are complaining about instability, you can order an instability series. This can be confusing since many patients are not sure how to describe their shoulder symptoms and often say they are unstable due to arthritis or pain. Unless it is clear that they are unstable or had a dislocation, go ahead and order an arthritis series.
Indication: Instability, Bankart lesion, Hx of dislocation, "shoulder keeps coming out of joint"

Matsen Series - 4 view Elbow

Elbow complaints need a 4 view of the elbow
Indication: Anything about elbow

AP and Lat of Humerus

Fractured humeri need an AP and Lateral of Humerus
Indication: True fracture of Humerus

AC Series Bilat with and without weights

This is for AC separations.
Indication: AC separation

Serendipity View

If a patient has pain or instability in sternum area they need an Serendipity View of the SC joint. You may also need to do an AC series to assess the Clavicle.
Indications: SC separation

When in doubt - order an arthritis series.
