The World's Number 1 Selling Total Elbow

For complete patient matching flexibility, the Coonrad/Morrey Total Elbow is unsurpassed in interchangeability and design and is the Total Elbow of choice for its ease of use. Backed by more than 20 years of clinical success, the Coonrad/Morrey Total Elbow is indicated for primary and revision intervention, post-traumatic and rheumatoid arthritis, and severe trauma reconstruction. This bottom line result: that's what our ease of operation, enhanced fixation, and simple, precise instrumentation can provide.

For more information about the Coonrad/Morrey Total Elbow, contact your Zimmer representative.
Maximizing stability by minimizing rotation.

Unique Proximal Humeral Flange
Anterior flange permits the insertion of bone graft anteriorly to enhance thickening of bone stock at the point where maximum stress has been found to occur. This helps protect the bone/cement/implant interface.

TiVANIUM® Ti-6Al-4V Alloy
Provides for durable and lightweight construction.

Zimmer Certified Poly Bushings
Ultra-high molecular weight polyethylene bushings prevent metal-to-metal contact.

Plasma Spray Coating
Provides increased cement fixation. These implants are intended to be used with bone cement both for immediate and long-term fixation.

Complete Interchangeability
- Twelve Humeral Stems—4”, 6”, and 8” lengths in extra-small, small, and regular sizes
- Ten Ulnar Stems—regular and long lengths in extra-small, small, and regular sizes
- Provides comprehensive patient matching and intraoperative flexibility
- Two-piece locking pin simply snaps together and provides accuracy and efficiency
- Easy disassembly of the locking pin enhances interchangeability in revision cases

Enhanced Severe Trauma Reconstruction
The longer flange option addresses distal/humeral non-union indications4,5 without compromising the elbow joint’s performance.

Clinical Success
In joint replacement surgery, total hip surgery offers a standard for clinical success. In comparison the Coonrad/Morrey Total Elbow has performed equally or better2,3. Backed by more than 17 years of clinical success2,4, the Coonrad/Morrey Total Elbow is indicated for primary and revision intervention, post traumatic and rheumatoid arthritis3,6, and severe trauma reconstruction4,5.
