Natural Resources Education: Strategic Vision for the 21st Century

B. Bruce Bare, Dean College of Forest Resources University of Washington Seattle, WA 98195-2100

Symposium on Forest Ecology and Management, Central University of the South Coast, University of Guadalajara, Autlan de la Grana, State of Jalisco, Mexico, August 29, 2007

Topical Outline

- <u>Shifting paradigm</u> of natural resource management
- <u>Forces</u> that are driving <u>future</u> <u>change</u>
- <u>Sustainability</u> as the guiding paradigm
- <u>Creating future</u> natural resource <u>leaders</u>

Shifting Natural Resource Management Philosophy

- <u>20th Century</u>
- <u>Agricultural Model</u>
- <u>Utilitarian</u> emphasis
- <u>Output</u> oriented
- <u>Stand</u> level
- <u>Sustained yield</u> (timber primacy)
- <u>Multiple use</u>

- <u>21st Century</u>
- Ecosystem Model
- <u>Naturalistic</u> emphasis
- <u>State</u> oriented
- <u>Landscape</u> view
- <u>Sustainability</u> (multiresource)
- Integrated use

21st Century Decision Environment

- New <u>complexities</u> due to <u>uncertainties</u>
 - <u>Bio-physical</u> systems (environmental change)
 - <u>Socio-economic</u> systems (unpredictable <u>political</u> institutions and <u>market</u> situations)
- <u>Global climate change</u>
- <u>Global market for ideas</u>
- Information age (internet, mobility, etc.)

21st Century Decision Environment

- <u>Reducing</u> forest <u>risk</u> may replace <u>productivity</u> as principal <u>concern</u> of managers
- Increasing forest <u>resiliency</u> for <u>sustainability</u> will grow stronger
- Organizational <u>networks</u> and <u>collaborative</u> <u>institutions</u> may replace top-down <u>hierarchical structures</u>

Why a Paradigm Shift?

- Changing <u>societal values</u> of a <u>growing</u> and <u>urbanizing population</u>
- Growing <u>awareness</u> of the <u>ecological</u> and <u>environmental</u> implications of <u>climate</u> <u>change</u>
 - <u>loss</u> of <u>biodiversity</u> in <u>managed</u> forests, <u>invasives</u>, <u>endangered</u> <u>species</u>, <u>wildfire</u>, <u>water</u>, and <u>forest health</u> (insects and diseases)

21st Century Issues

- <u>Societal desires for</u>:
 - protection vs. production forests
 - <u>natural</u> vs. <u>plantation</u> forests
 - preservation vs. conservation
 - <u>use</u> vs. <u>exchange</u> value
 - <u>passive</u> vs. <u>active</u> management

21st Century Issues

- Additional issues
 - ecosystem <u>fragmentation</u>
 - loss of <u>habitat</u> <u>connectivity</u>
 - forest land <u>conversion</u>
 - loss of <u>ecosystem</u> <u>services</u>
 - <u>financial incentives</u> which promote land <u>development</u> and <u>conversion</u> to HBU
 - Tremendous change in <u>private forest</u> land <u>ownership</u> patterns in USA

Topical Outline

- <u>Shifting paradigm</u> of natural resource management
- Forces that are driving <u>future change</u>
- <u>Sustainability</u> as the guiding paradigm
- <u>Creating future</u> natural resource <u>leaders</u>

Forces Driving Change

- <u>Affluent</u> and <u>growing</u> population with <u>leisure</u> time and <u>disposable</u> income
- <u>Global climate change</u>
- Impacts of a global economy
- <u>Renewable energy</u> requirements
- Forest health issues
- Enhancement of biodiversity

Topical Outline

- <u>Shifting paradigm</u> of natural resource management
- Forces that are driving <u>future change</u>
 - <u>Sustainability</u> as the guiding paradigm
- <u>Creating future</u> natural resource <u>leaders</u>

What Is Sustainability?

- A set of <u>activities</u> or <u>processes</u> that produce desired <u>products</u> and <u>services</u> over <u>long periods</u> of time
- <u>Rational</u> approach that seeks a <u>dynamic</u> <u>equilibrium</u>
- Uses <u>interdisciplinary</u> set of <u>social</u>, <u>ecological</u> and <u>economic</u> sciences in an <u>integrated</u> fashion
- <u>Future</u> generations have the <u>opportunity</u> to enjoy the same <u>products</u> and <u>amenities</u> as we do

Seeking Sustainability Is Complex

- Many <u>stakeholders</u>
- <u>Multiple</u> and <u>conflicting</u> goals (<u>trade offs</u>)
- <u>Uncertainty</u>
 - future <u>societal</u> needs
 - future <u>state</u> of ecosystem and unknown <u>environmental</u> factors
 - lack of <u>complete understanding</u> of ecosystem <u>behavior</u> and <u>reaction</u> to <u>natural</u> or <u>man</u> <u>caused</u> perturbations

Seeking Sustainability

- The use of <u>science</u> is absolutely <u>necessary</u> to find the proper balance but is by no means <u>sufficient</u>
- <u>Value preferences</u> expressed through the <u>economic</u>, <u>political</u>,and <u>legal</u> systems will largely determine the ultimate balance
- Requires that we adopt an <u>integrated</u>, <u>holistic</u>, <u>adaptive</u> approach that <u>simultaneously</u> considers <u>all</u> values

Sustainable Forestry

- A type of <u>management</u> that views the forest not as the source of any one economic product or service, but as an <u>integrated whole</u>
- Respects the <u>full range</u> of <u>environmental</u>, <u>social</u>, and <u>economic</u> values of the forest and attempts to <u>integrate</u> these diverse values

Source: Roundtable on Sustainable Forests

Topical Outline

- <u>Shifting paradigm</u> of natural resource management
- <u>Forces</u> that are driving <u>future</u> <u>change</u>
- <u>Sustainability</u> as the guiding paradigm
 - Creating future natural resource leaders

Mission Statement

The College of Forest Resources is dedicated to generating and disseminating knowledge for the stewardship of <u>natural</u> and <u>managed</u> environments and the <u>sustainable use</u> of their <u>products</u> and <u>services</u> through <u>teaching</u>, <u>research</u>, and <u>professional</u> and <u>public</u> <u>outreach</u>.

Vision Statement

The College of Forest Resources will be a <u>world-class internationally</u> recognized source of <u>knowledge</u> relevant to <u>environmental</u> and <u>natural resource</u> issues.

Strategic Themes

Land and ecosystem management in an urbanizing world

 conflicts and tradeoffs among competing human and natural resource values in the growing and urbanizing global population

• <u>Sustainable</u> forest enterprises

 land and water resource production, use, and management, with attention to the material and social impacts of sustainable practices

Sustainability Is Our Integrating Goal

- <u>Sustainable forestry in managed and natural</u> forests
 - Plantations, parks, reserves, watersheds
- <u>Sustainable urban environments</u>
 - Urban forestry, horticulture, public gardens, restoration ecology, water, wildlife
- <u>Sustainable forest enterprises</u>
 - Paper mills, precision forestry technologies, recycling, wood products, non-timber products, bioproducts

College's Programmatic Niche

Study and investigate key principles and processes that explain the behavior and interaction of biotic and social systems along gradients from highly to minimally impacted terrestrial ecosystems — gives us a unique interdisciplinary base from which to play a leadership role in developing the science of sustainability – both on and off campus.

Our Academic and Research Programs

- Emphasize coupled <u>human</u> and <u>bio-physical</u> systems
- Support <u>development</u> of a new <u>science</u> of <u>sustainability</u> to <u>integrate ecological</u> and <u>economic</u> approaches in a <u>socially</u> acceptable manner
- Develop <u>technology</u>; <u>discover</u> new <u>scientific</u> <u>knowledge</u>; and <u>transfer</u> knowledge to the <u>user</u> <u>community</u>

Research Areas

Ecosystem Structure and Function

Productivity, health, processes, management

<u>Social and Human Systems</u>

Valuation, system integration, natural/human interactions

<u>Technology</u>

 Remote sensing, bio-energy, sustainable products, information technology, biotechnology

Program Offerings

 The College provides <u>high quality</u> – <u>impact</u> programs of study for <u>students</u> seeking: 1)
<u>professional education</u> and/or 2) <u>broad</u>
<u>scientific</u> understanding of forest <u>ecosystems</u>, <u>environmental</u>, and <u>amenity services</u>

- Environmental Science and Resource Management
- <u>Paper Science and Engineering</u>
- <u>Both</u> majors lead to a <u>Bachelor of Science in</u> <u>Forest Resources</u> degree

- Starting in 1907, our College offered programs of study in <u>forest management</u>, <u>logging engineering</u>, and <u>wood products</u>
- In late 1960's and early 1970's we added <u>outdoor</u> <u>recreation, wildlife science</u>, and <u>paper science and</u> <u>engineering</u> and dropped <u>wood products</u>
- In the 1980's and 1990's we added <u>urban</u> <u>horticulture</u>, <u>wildland</u> <u>conservation</u>, and <u>resource</u> <u>sustainability</u> and dropped outdoor recreation

- <u>Enrollment</u> in our undergraduate programs started to <u>decline</u> in mid-1990's
- With <u>seven undergraduate majors</u> and a <u>shrinking enrollment</u>, our class size <u>efficiency</u> did not match that of the University as a whole
- <u>Strategic planning</u> indicated that consolidation of our <u>majors</u> was in order

- New integrated undergraduate curriculum in <u>Environmental Science and Resource Management</u>
 - focuses specialization at the <u>graduate-level</u>
 - fosters <u>team approach</u> to natural resource education through <u>interdisciplinary</u> courses
 - promotes <u>sustainability</u>
 - has potential to attract <u>more students</u> into the College

- New integrated undergraduate curriculum in <u>Environmental Science and Resource Management:</u>
 - <u>retains</u> and <u>improves</u> our historic strengths in <u>forestry</u>, <u>conservation</u>, <u>horticulture</u>, <u>and</u> <u>wildlife</u>
 - improves <u>flexibility</u> in the curriculum allowing students to <u>tailor</u> their studies via four <u>options</u>
 - is '<u>transfer</u>-<u>student</u> friendly'
 - improves <u>integration</u>, <u>access</u> and <u>efficiency</u>
 - provides <u>opportunity</u> to obtain both an <u>MFR</u> and <u>BSF</u> in five years

Graduate Program

- Offer professional masters programs in forest management, urban horticulture, urban forestry, etc., to provide in depth technical knowledge (accredited where appropriate) to satisfy employer needs
- <u>MFR</u> graduate programs <u>linked</u> to our <u>four</u> year <u>BSF</u> undergraduate programs provide <u>efficiency</u> and <u>flexibility</u>
- <u>Consolidate</u> learned degree (<u>MS</u> and <u>PhD</u>) programs to gain <u>efficiency</u> and <u>integration</u>

Summary

- <u>Characteristics</u> of a successful <u>natural resources</u> education in the <u>future</u> include:
 - Solid preparation in <u>bio-physical</u> and <u>socio-economic</u> sciences, communication, natural world, and <u>critical</u> reasoning
 - <u>Understand and appreciate</u> the role of <u>interdisciplinarity</u>, integration, <u>collaboration</u>, <u>and cooperation</u>
 - Work as member of a <u>resource team</u>
 - <u>Understand</u> how to work on issues at a variety of <u>spatial</u> <u>scales</u>

The End
