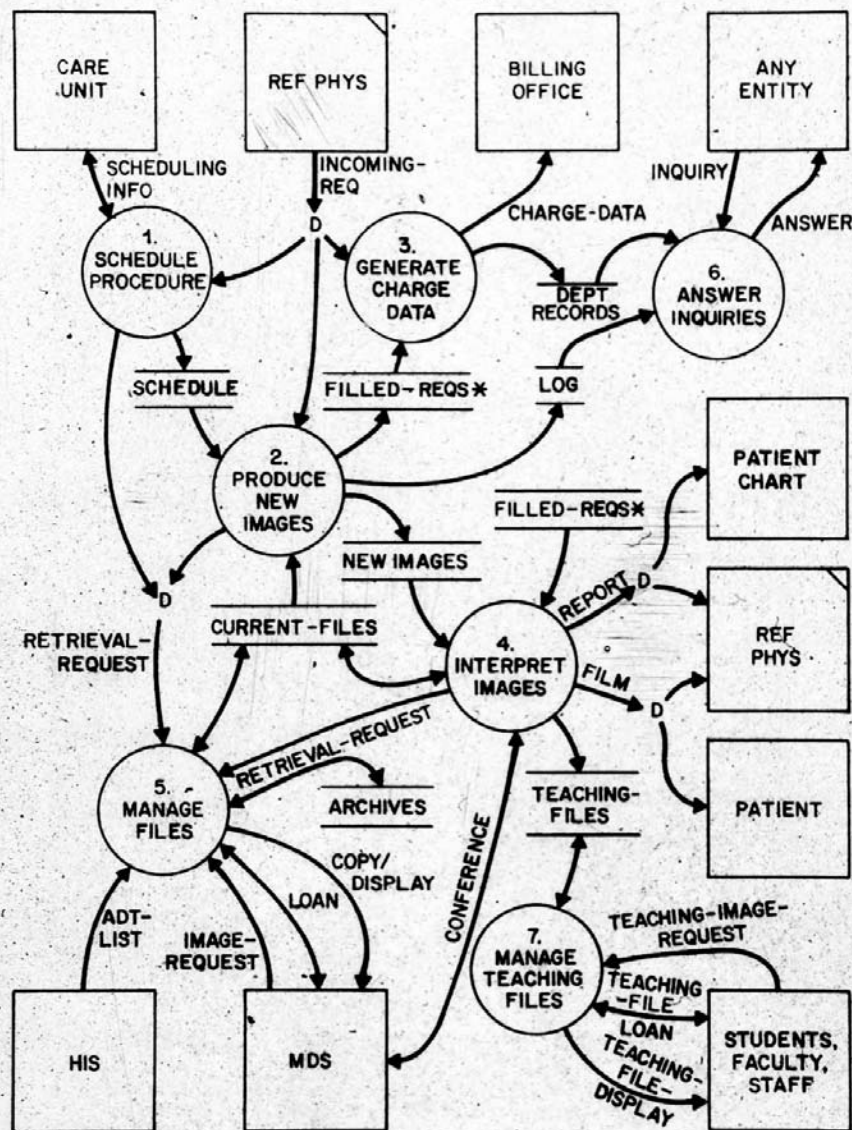

FIGURE 1 -DIAGRAM O
-RADIOLOGY DEPARTMENT

Radiology Informatics - The First Generation

- **Replace film hardcopy with softcopy display systems**
- **Replace film and tapes with media of higher density and shorter access time**
- **Replace film librarians with networks and software**
- **Post-office functionality**

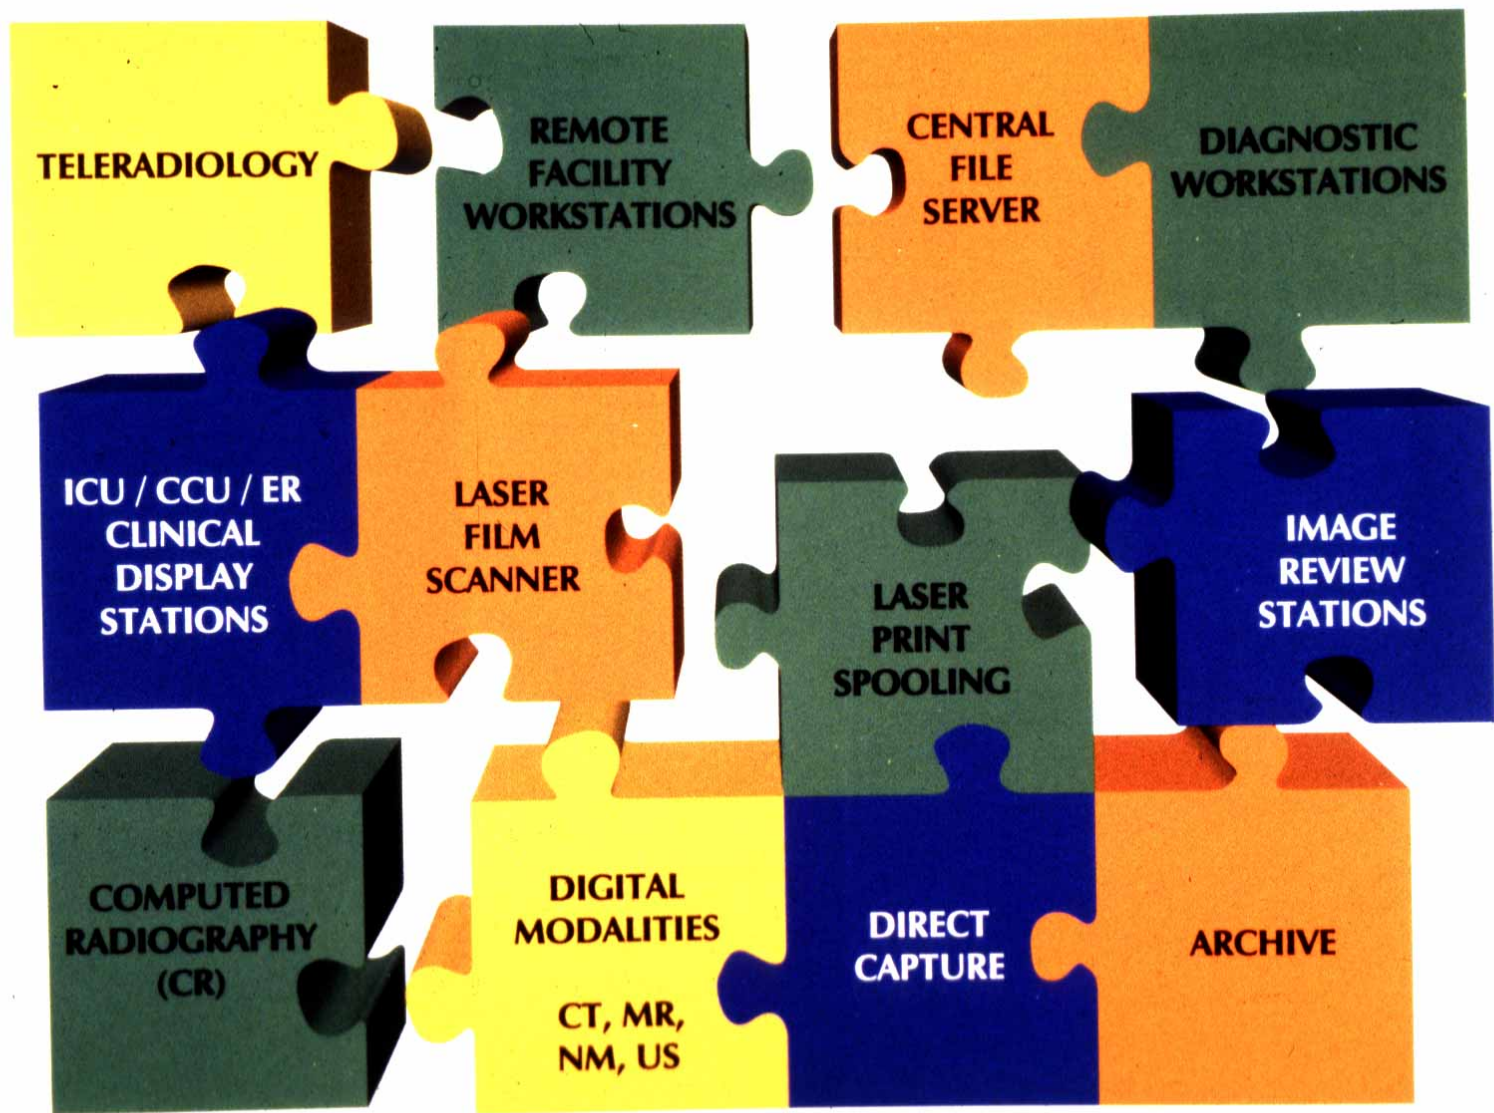

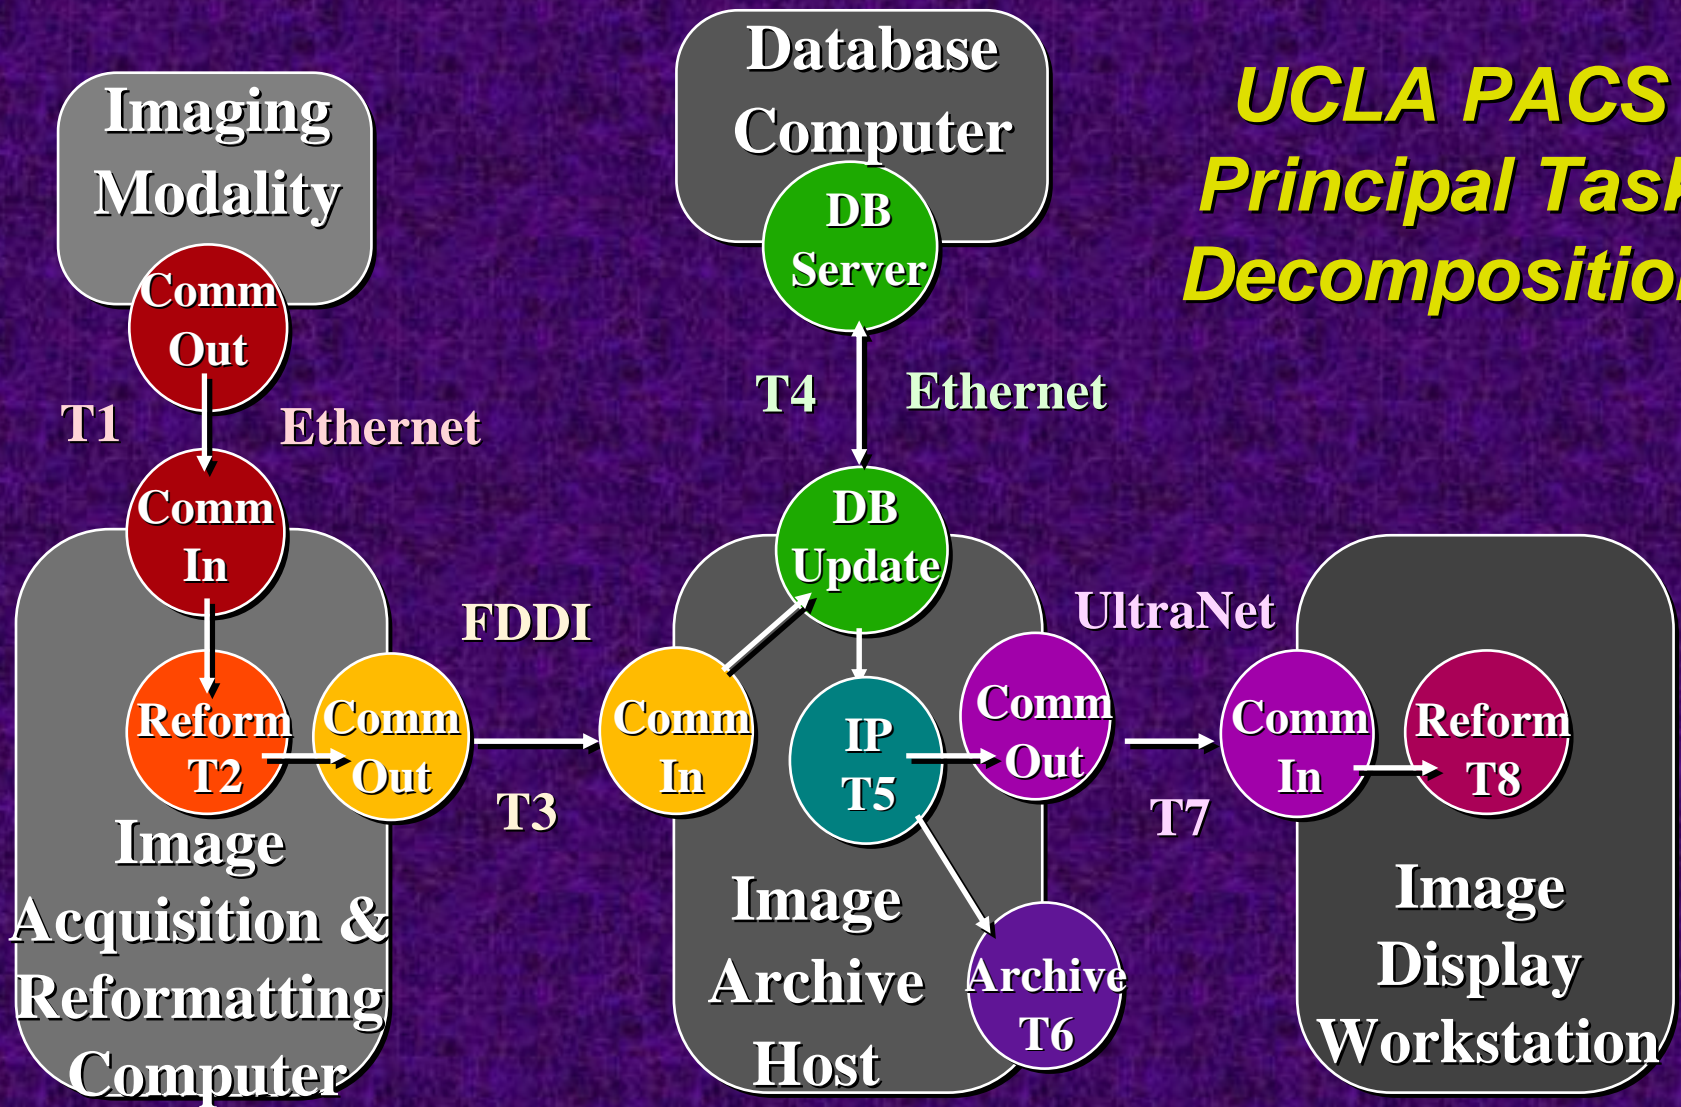

UCLA PACS Principal Task Decomposition

*Technology Adoption Life Cycle**

* Geoffrey Moore, Crossing the Chasm, 1991.

Technology Adoption Psychographics

- **Innovators: Technology Enthusiasts (2-4%)**
 - More interested with tech. itself than applic. to signif. problems
- **Visionaries: Early Adopters (12-14%)**
 - Matching an emerging technology to a strategic opportunity
 - Looking for a fundamental breakthrough (change agent)
- **Pragmatists: Early Majority (34 %)**
 - Technology to enhance, not overthrow established practices
 - Incremental improvement - measurable, predictable progress
- **Conservatives: Late Majority (34 %)**
- **Skeptics: Laggards (16%)**

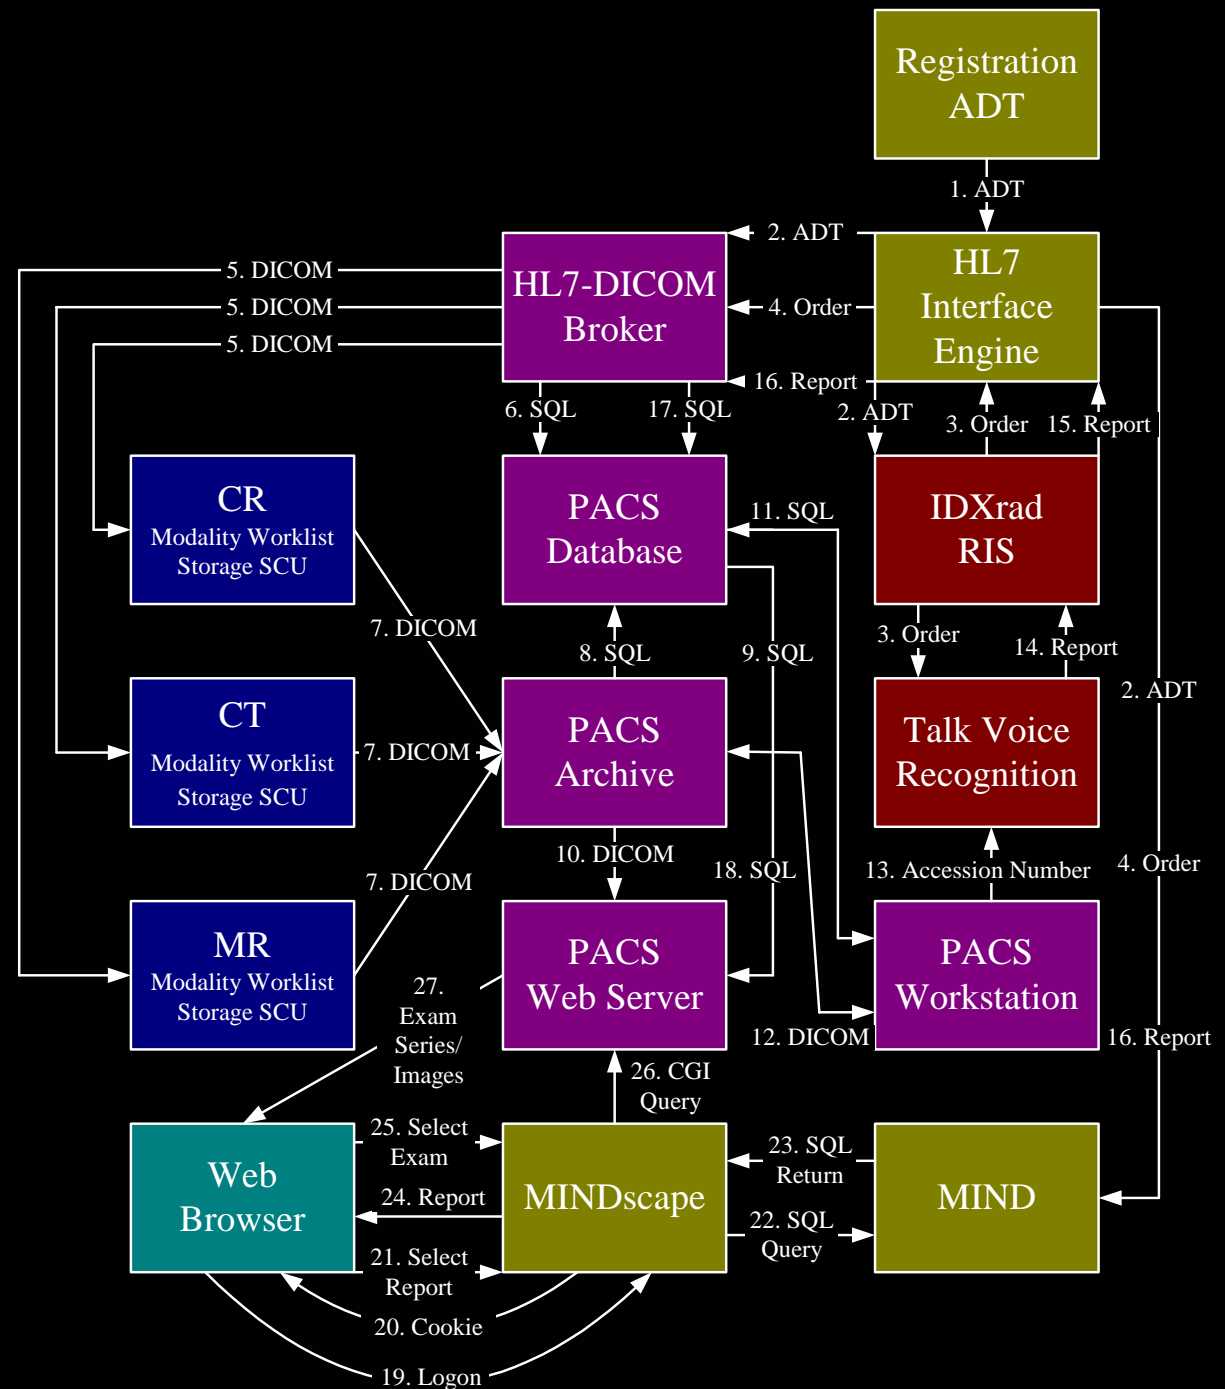

Scenario

- **Primary care physician logs into MINDscape (Cerner)**
- **Selects radiology exam and views images of interest**
- **Phones radiologist with query**
- **Radiologist logs into workstation and they review images together over the network (not quite there yet)**
- **Once impromptu conference has concluded, radiologist saves the newly annotated images**
- **Primary care physician selects newly annotated image and either copies into patient summary document, stores in a teaching file, or consults colleague**

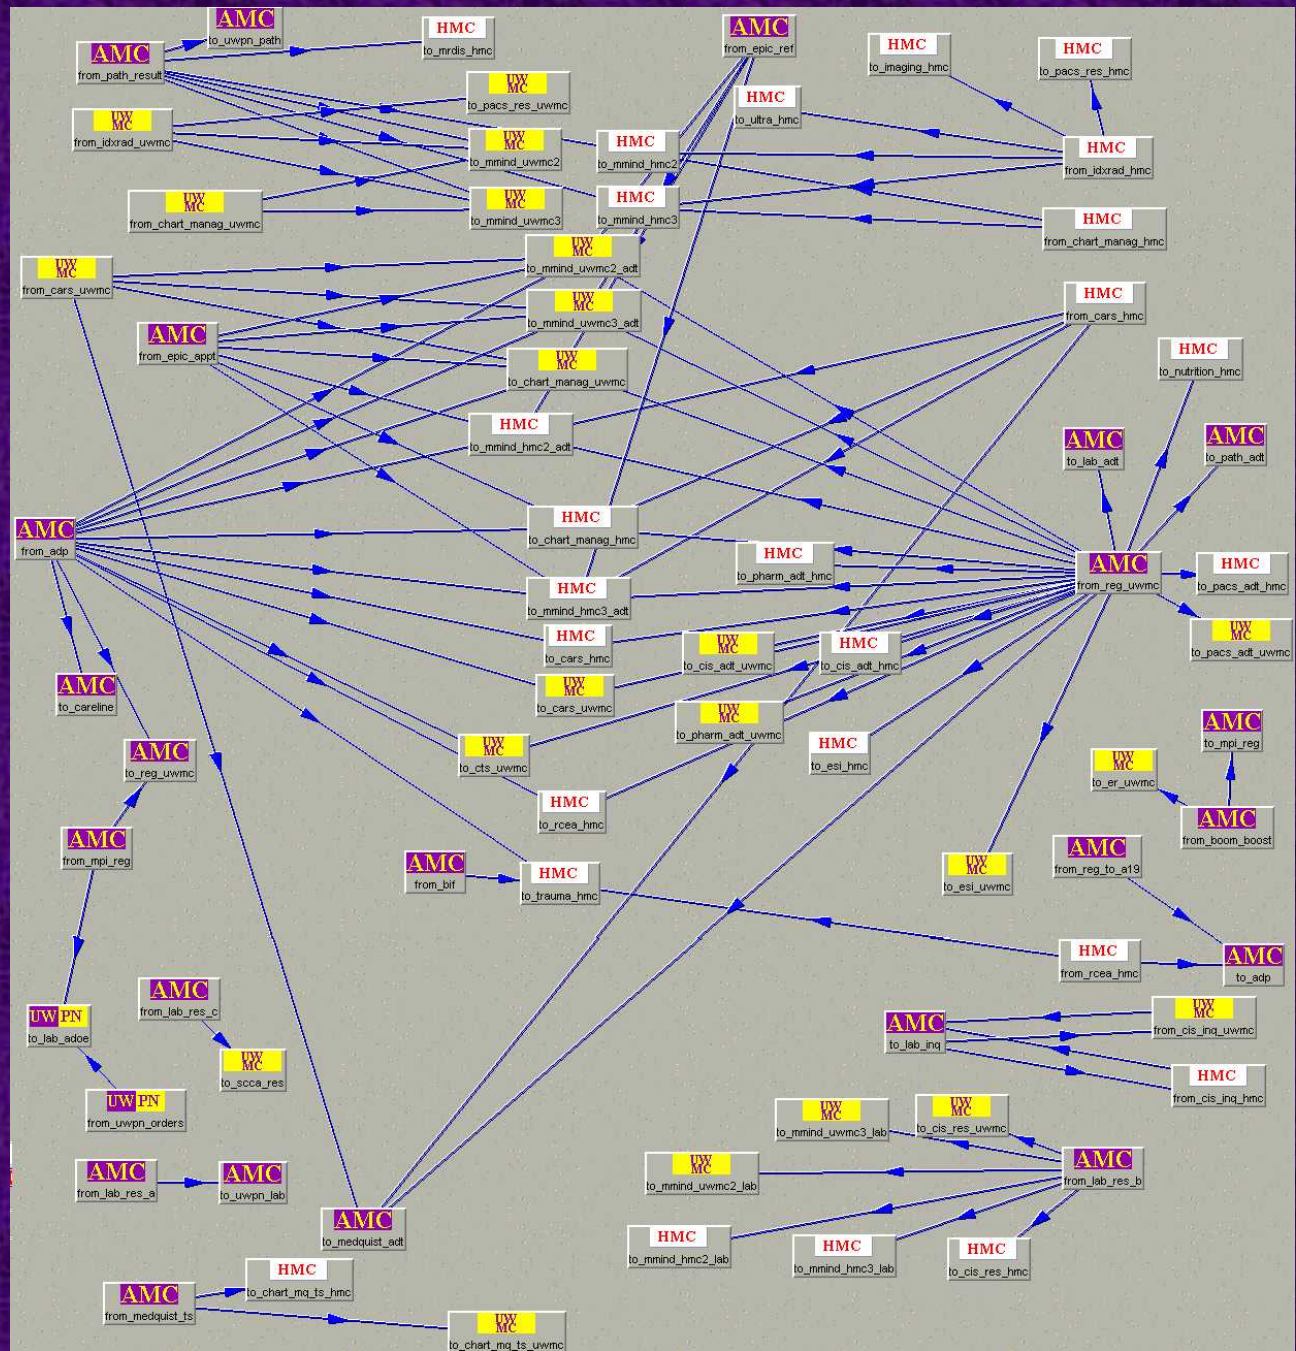

5 Step Basic Tango

27 Step PACS Shuffle

Routing of HL-7 Messages for Patient Report and Demographics

Health Level 7

- **Std. means of transferring medical textual data**
 - Triggers
 - Messages
 - Segments
 - Fields
- **HL7 became an ANSI Accredited Standards Developing Organization in June 1994**
- **HL7 corresponds to the conceptual definition of an application-to-application interface placed in the seventh layer of the OSI model**
- **Web resources:**
 - <http://www.hl7.org/>
 - <http://www.mcis.duke.edu/standards/HL7/pubs/version2.3/html/httoc.htm> (this is a great reference for HL7 and esp. version 2.3)

Health Level 7 Triggers

- **Trigger events - HL7 assumes that an event in the real world of healthcare creates the need for data to flow among systems**
- **Unsolicited transaction - when the transfer of information is initiated by the application system that deals with the triggering event**
- **No assumption is made about the design or architecture of the application system**
- **The scope of HL7 is restricted to the specification of messages between application systems, and the events triggering them**

Health Level 7 Messages

- **A message is the atomic unit of data transferred between systems**
- **The message is comprised of a group of segments in a defined sequence**
- **Each message has a message type that defines its purpose (for example):**
 - **ADT (Admission, discharge or transfer message)**
 - **ORM (Order message)**
 - **ORU (Observation result/unsolicited message)**

Health Level 7 Segments

- A segment is a logical grouping of data fields
- Each segment is identified by a unique three character code known as the Segment ID
- For example, the ADT message may contain the following segments:
 - MSH (message header)
 - EVN (event type)
 - PID (patient ID)
 - PV1 (patient visit)

Health Level 7 Fields

- A field is a string of characters
- When fields are transmitted, they are sent as character strings
- In defining a segment, the following information is specified about each field:
 - Position
 - Maximum length
 - Data type
 - Optionality
 - Repetition
 - ID number
 - Name

HL7 Message Delimiters

- In constructing a message certain special characters are used
- They are the segment terminator, the field separator, the component separator, subcomponent separator, repetition separator, and escape character
- The subset of the possible delimiters may be limited by negotiations between applications
- Delimiters are defined in the MSH segment

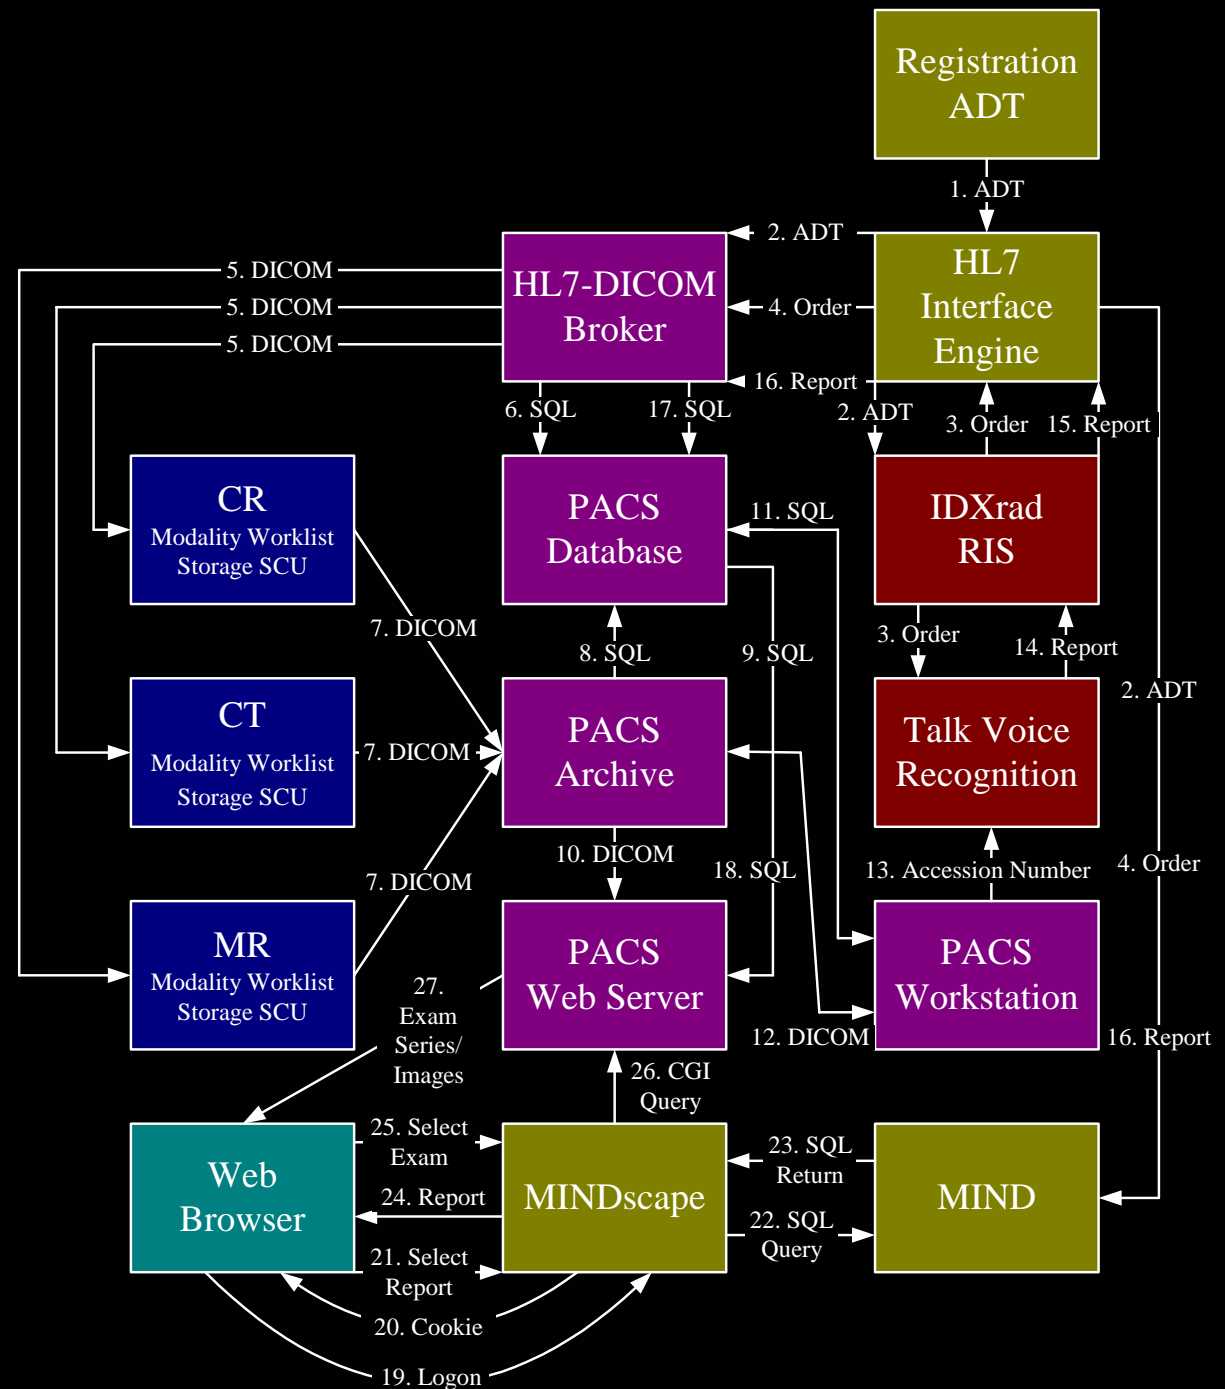

HL7 Sample Message

... etc

DICOM (Digital Imaging and Communications in Medicine)

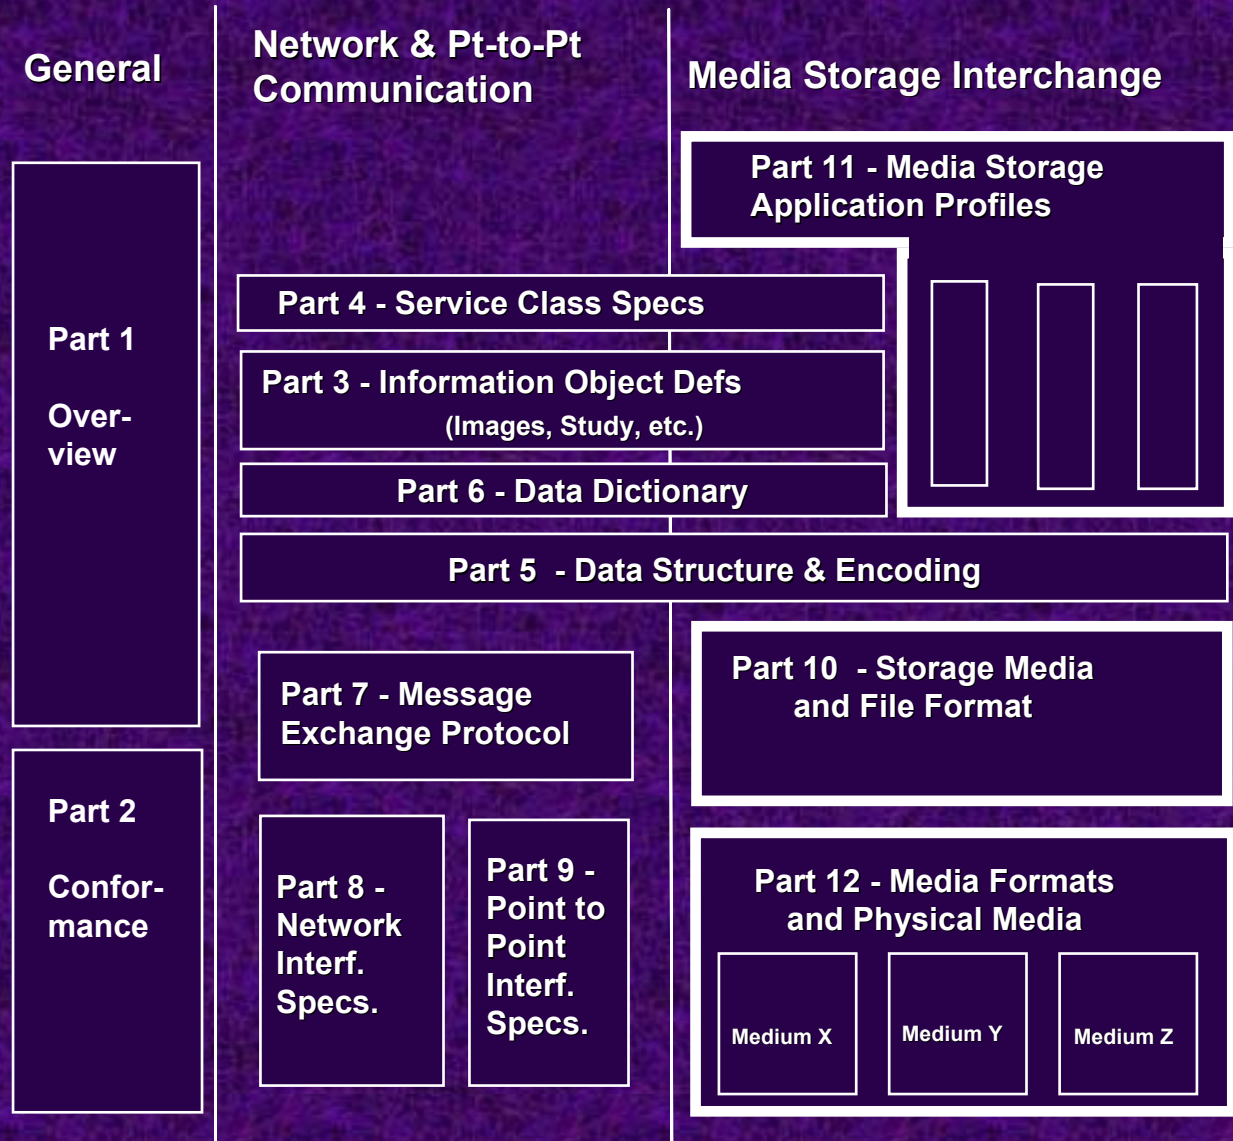

- **Most important functions**
 - unambiguous definition of terms used
 - define models of image communication
 - agreed upon by those who adopt the standard
- **Has become the predominant standard for the communication of medical images**
- **Takes into account existing standards for networks**
- **By necessity, written in dry language with a minimum of explanatory information (thousands of pages)**
- **Web resource: <http://medical.nema.org/>**

DICOM

- Service Classes – Users and Providers
- Information Objects and Information Object Definitions
- Service-object pairs (SOP)

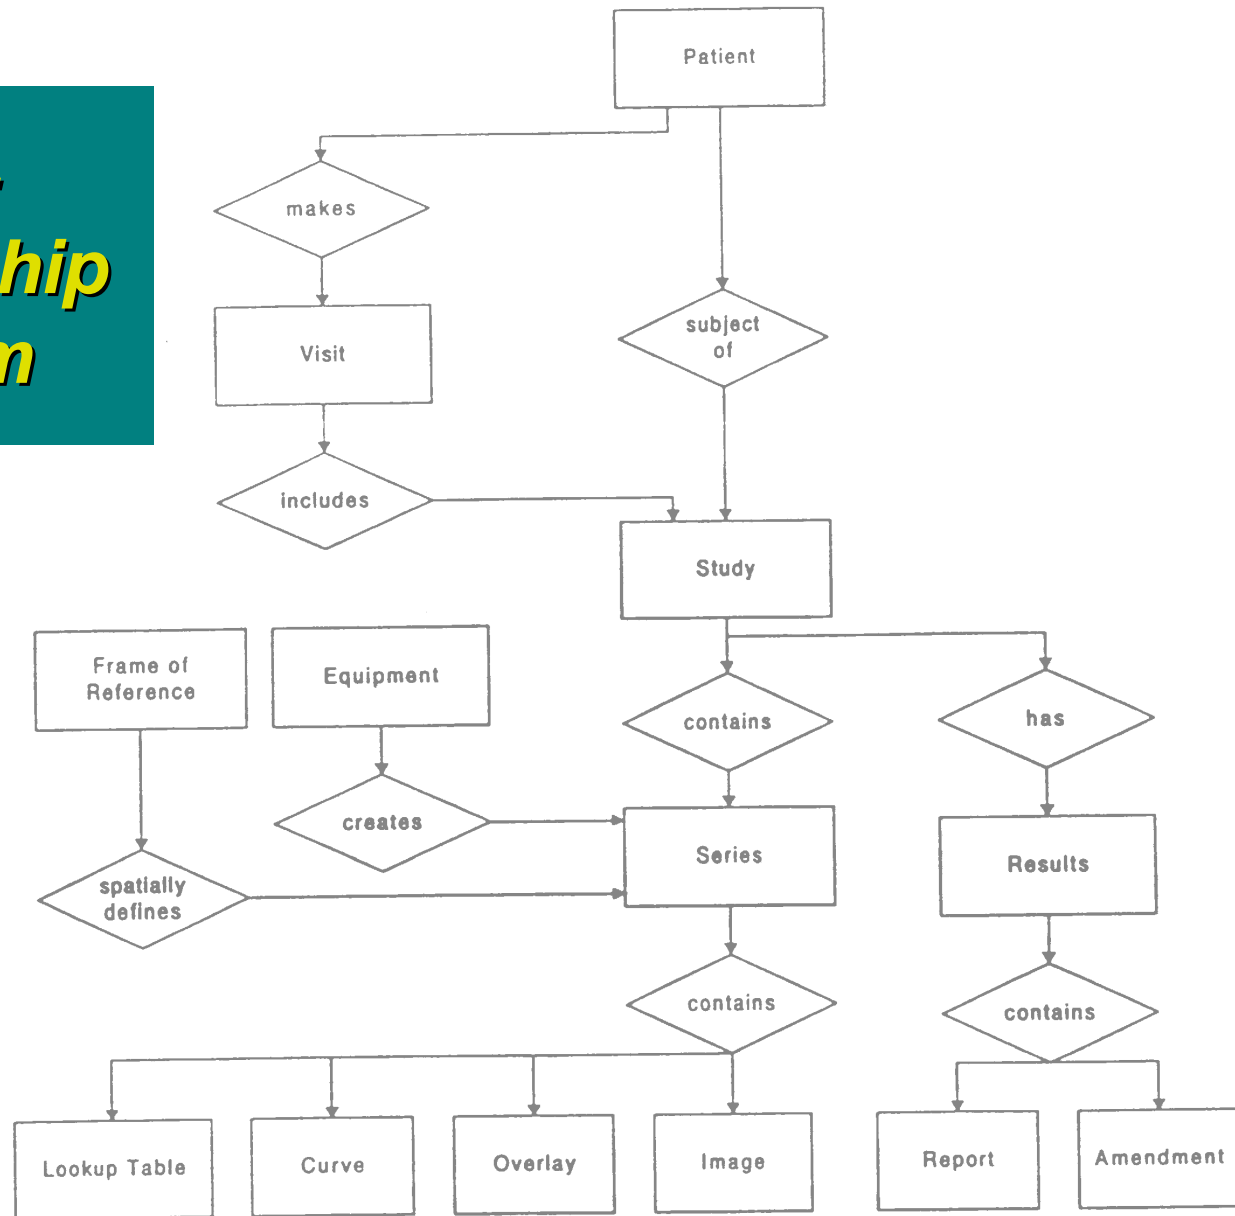

DICOM Parts Topology

DICOM Information Modeling

- **An object-oriented model for medical imaging information**
- **E-R Modeling - how information entities relate to one another**
 - **Entities (objects) represented by rectangular boxes**
 - **Entities have attributes (data elements of the ACR-NEMA standard)**
 - **Relationships denoted by diamond-shaped boxes**
 - **Images, reports and patients, for example, are all “information objects”**

Entity-Relationship Diagram

DICOM Information Modeling (cont.)

- **Information objects are the first fundamental component of DICOM**
- **Information Object Definition (IOD) structure**
 - **Mandatory attributes**
 - **Optional attributes**
 - **Conditional attributes**
 - **Information object instance**

DICOM Information Modeling (cont.)

- **Unique Identifier (UID)**
 - **UID used by DICOM whenever one thing is referenced by another (e.g., transfer syntax)**
 - **Organizational root (e.g., DICOM = 1.2.840.10008)**
 - **The UID exists to provide a unique identity to an object, not to carry information about the object it identifies**

DICOM Service Classes

- **The second fundamental component of DICOM**
- **IOs and communication links between devices are not sufficient in and of themselves to provide functionality**
- **Need devices to perform some operation (service) with the IOs**
- **DICOM provides standardized services (negotiated up-front) that are used on the IOs**

DICOM Service Classes (cont.)

- In O-O terms, the services are referred to as service classes; a service may be applied to a variety (or class) of information objects
- Because DICOM has both composite and normalized IODs, there are both composite and normalized services

DICOM Service Classes (cont.)

- **Service elements - DICOM builds complex services (e.g., storage and query/retrieve) out of more fundamental (primitive) DICOM message service elements (DIMSEs)**
 - **Five DIMSE-C objects**
 - C-Store, C-Get, C-Move, C-Find, C-Echo
 - **Six DIMSE-N objects**
 - N-Event-Report, N-Get, N-Set, N-Action, N-Create, N-Delete

DICOM Service Classes (cont.)

- **DICOM Services**
 - **Storage (DIMSE Store)**
 - **Modality Worklist Management**
 - **Print**
 - **Query/Retrieve (DIMSE Find/Get/Move)**
 - **Verification**
 - **Patient/Study/Results Management**
 - **Study Content Notification**
- **Service Class User (SCU)**
- **Service Class Provider (SCP)**

Service-Object Pairs

- The SCs and IOs are combined to form the elemental functional units of DICOM, termed service-object pair (SOP) classes
- Everything DICOM implements is based on the use of SOP classes
 - e.g., CT image storage SOP class
 - each carries a UID (e.g., 1.2.840.10008.5.1.4.1.1.2)
 - Once the attributes are “filled in”: SOP instance
 - The process of DICOM communication involves the exchange of SOP instances with the use of DICOM messages

Service-Object Pair (SOP) Class

Image Acquisition

- **Film digitization and frame grabbers (old)**
- **DICOM modalities**
 - **Computed Tomography (CT)**
 - **Magnetic Resonance Imaging (MRI)**
 - **Nuclear Medicine (including SPECT and PET)**
 - **Ultrasound (US)**
 - **Computed Radiography (CR)**
 - **Digital Radiography (DR)**
 - **Digital Fluoroscopy (DF)**
- **Mammography (some digital, but mostly film)**

Data Generated/Exam

Exam Type	Images	Matrix Size	Mbits
Screen-film	4	2048x2560x12	320
	4	4096x5120x12	1280
Ultrasound	60	512x512x8	120
Nuclear Med.	36	256x256x12	36
Comp. Tomo.	250	512x512x12	1000
Mag. Reson.	500	256x256x12	500
Mammography	4	6144x5000x12	1475

SOP Classes Supported: Storage

SOP Class Name	SOP Class UID
Computed Radiography Image Storage	1.2.840.10008.5.1.4.1.1.1
CT Image Storage	1.2.840.10008.5.1.4.1.1.2
MR Image Storage	1.2.840.10008.5.1.4.1.1.4
Secondary Capture Image Storage	1.2.840.10008.5.1.4.1.1.7
Standalone Overlay Storage	1.2.840.10008.5.1.4.1.1.8
X-Ray Angiographic Image Storage	1.2.840.10008.5.1.4.1.1.12.1
X-Ray Radiofluoroscopic Image Storage	1.2.840.10008.5.1.5.1.1.12.2
RT Image Information Storage	1.2.840.10008.5.1.4.1.1.481.1
RT Structure Set Information Storage	1.2.840.10008.5.1.4.1.1.481.3
RT Plan Information Storage	1.2.840.10008.5.1.4.1.1.481.5

PACS - The Next Generation

- **New Intelligent Capabilities**
 - Intelligent user interface
 - Multimedia support
 - High-level data object management
 - Rule-based processing
 - Computer-aided diagnosis
- **Fully Integrated, Enterprise-wide Information Services**
 - PACS, HIS / RIS (HL7), Voice Recognition (voice → text)
 - Path / Lab / Nursing / Pharm / etc.
- **Library Functionality**

Local Area Networks

- **Ethernet**
 - Shared bandwidth
 - Switched – full duplex
 - 10, 100, 1000 and 10,000 Mbps/sec
- **ATM/SONET**
 - Asynchronous Transfer Mode
 - Synchronous Optical Network
 - 155, 622 and 2,500 Mbps

Image Archives

- **Data Storage Technologies**
 - Hierarchical Storage Management (HSM) systems
 - Magnetic disk
 - Magneto-optic disk (MOD/EOD)
 - WORM optical disks
 - Digital Linear Tape (DLT) cartridges
- **Data Compression**
 - Lossless (Huffman, Lempel-Ziv-Walsh: LZW)
 - Lossy (JPEG, wavelets)

Display Hardware

- **Large format raster-scanned CRT**
- **CRT inferior to laser printed film (4096 x 5120)**
 - **Resolution: 1024x1280 (C), 1200x1600 (B), 1728x2304 (A)**
 - **Luminance: 500 ft-L vs. 70-80 ft-L**
 - **Dynamic Range: bit depth (16-bit per pixel frame buffer)**
 - **Veiling Glare: ambient light**
 - **ROC Studies: OK for primary diagnosis**
- **150-200 ft-L 3840 x 2400 flat panel monitor**

**PACS Web on
MCIS PC
1280x1024
\$3K**

***5E ICU PACS 2C workstation
1280x1024, \$27K (same monitors as Web)***

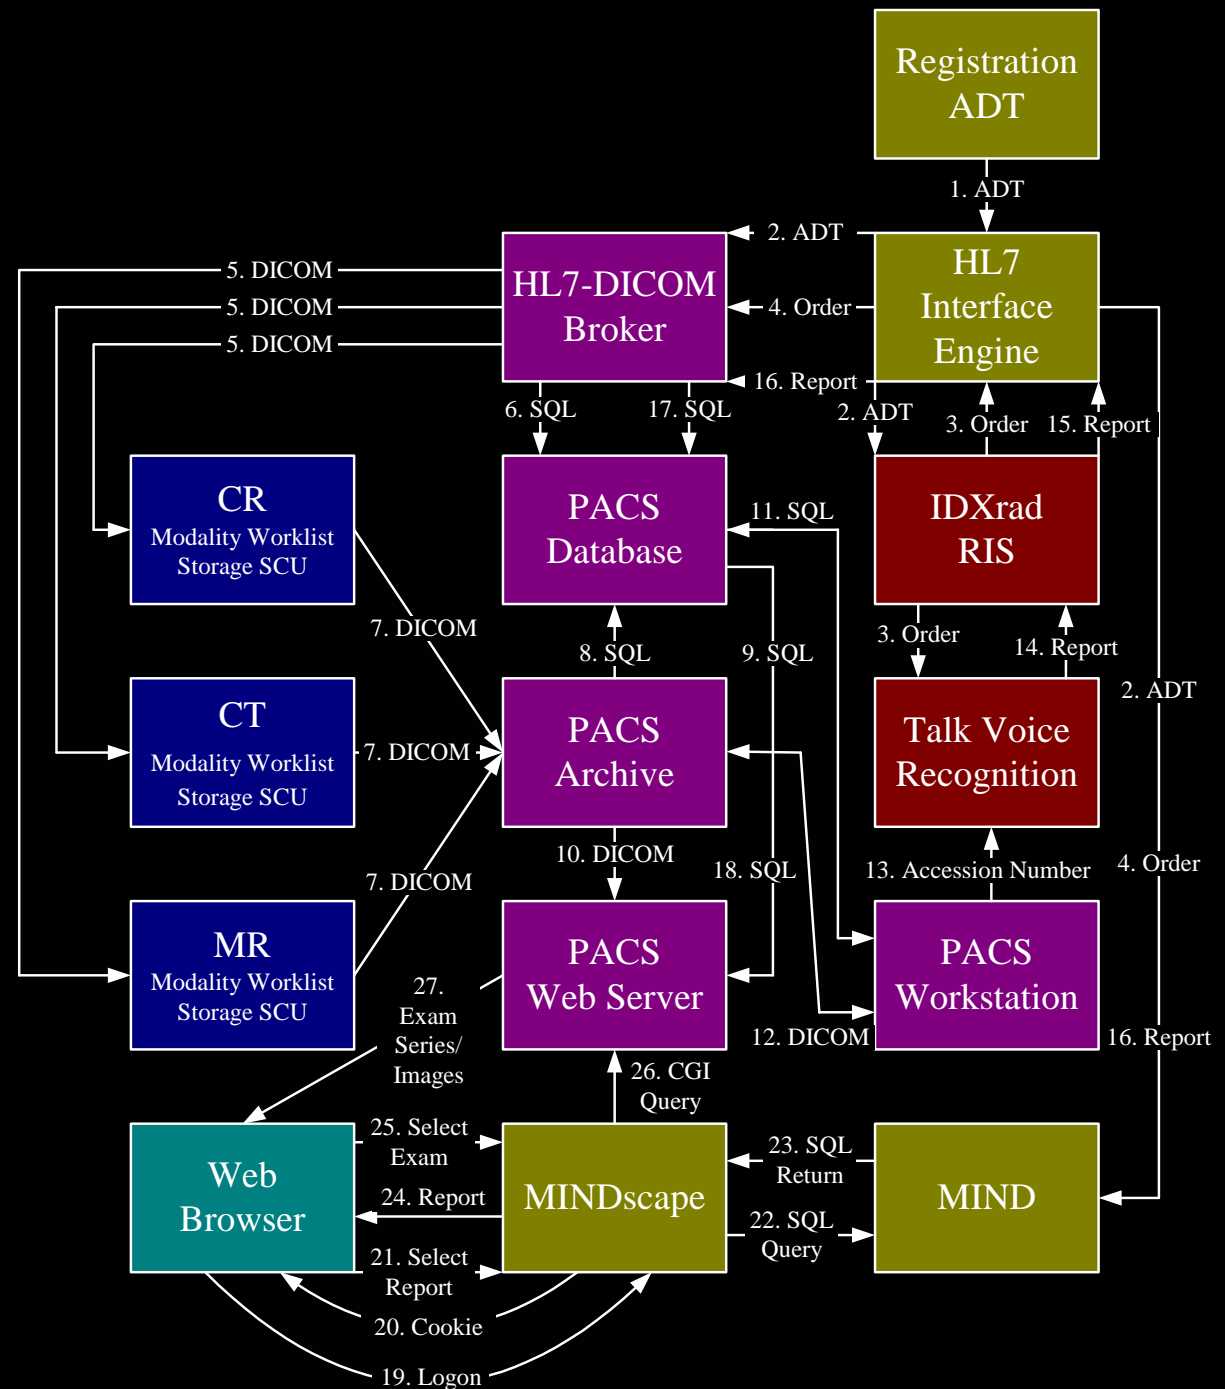

***Neuroradiology Reading Room 4B w/s
1200x1600, \$54K***

Scenario (reprise)

- **Primary care physician logs into MINDscape (Cerner)**
- **Selects radiology exam and views images of interest**
- **Phones radiologist with query**
- **Radiologist logs into workstation and they review images together over the network (not quite there yet)**
- **Once impromptu conference has concluded, radiologist saves the newly annotated images**
- **Primary care physician selects newly annotated image and either copies into patient summary document, stores in a teaching file, or consults colleague**
