

Nerve Cell Dominoes

Neuron	Nucleus	Nucleolus	Nissl Bodies	Endoplasmic Reticulum
Contains genetic material (chromosomes) including information for the cell.	Produces ribosomes for translation of genetic information into proteins.	Groups of ribosomes used for protein synthesis.	System of tubes for transport of material within the cytoplasm.	Membrane-bound structure for packaging peptides and proteins into vesicles.
Golgi Apparatus	Microfilaments/ Neurotubules	Mitochondria	Dendrite	Axon
System of transport for materials within a neuron and may be used for structural support.	Produce energy to fuel cellular activities.	Part of neuron that brings information to the cell body.	Part of neuron that carries information away from the cell body.	Another name for a nerve cell.

Directions: Cut out each of the ten dominoes. Mix up the dominoes and then match each word with its correct description on another domino. Match the black dots of each domino. If you have matched the words and their descriptions correctly, you will have made a rectangle with all of the dominoes.

Example:
