

The Lobe Rap

By Caitlin W. and Nich F.

The occipital lobe controls your sight. Why
it does, we don't know why?

The temporal lobe controls how you hear,
like the clucking of a chicken or the
stomping of a deer.

The parietal lobe processes what you touch
whatever you can squeeze or grab or clutch.

The frontal lobe helps you think and
memorize so you can process what you need
right before your eyes.

(Beat box Solo)

These are the lobes of the brain and now y
know them so call up all your friends and
don't forget to show em'

WORD!

THE LOBE SONG

Frontal Lobe it helps you think
you can talk in just a blink.
Parietal Lobe, it helps you touch, just
be sure you don't touch too much!
Temporal Lobe is next, just listen to
my text. Temporal Lobe helps you hear,
you can hear from far or near.
Occipital Lobe is last; it helps you
see things that are vast. You use your
lobes everyday, they help you think,
see, hear, and say!

FRONTAL LOBE

OCCIPITAL LOBE

PARIETAL LOBE

TEMPORAL LOBE

The Lobes

The frontal lobe is in the
front of the brain it helps
you think keeping
everything in sync

Next stop is the parietal
lobe it helps you touch and
move around much

Here we are temporal lobe
it helps you hear without It
sounds aren't clear

The occipital lobe helps you
see everything in your sight
without it would be as dark
as night

Put all these lobes together
and you will gain one very
smart brain

Pinky and the Brain!

By Amber L. and Jordan C.

Frontal lobe, parietal lobe, dendrites,
dendrites, hippocampus, cortex, neuron is
the best, cerebellum, axon, hypothalamus,
brain stem carries stuff through you oh
yah, oh yah, axon terminal, temporal lobe
cerebrum, cerebrum, limbic system,
occipital lobe

& That's...

The End
yah

Big Brain Song

By Tristan A., Nathaniel P., & Ryan A.

In the big brain the mighty big brain the
Dendrites sleeps tonight. The Frontal
Lobe controls the thinking so you can
remember thoughts. Parietal Lobe
controls the touch....the Temporal Lobe
controls the hearing.... The Occipital
Lobe controls the sight. The Cerebellum
controls your balance so you can kick a
ball. In the big brain the mighty big brain
The Brain Stem helps you breathe, helps
you blink, and help your heart keep
pumping without thinking.

In the big brain the mighty big brain the
big brain sleeps tonight. How does the
brain wrinkle up in that little tiny skull?
That is all that we can tell you. You can
think of the rest by yourself.

Lobes

Sung to the tune of “The Wheels On The Bus”

By Keilan M. and Allen G.

The Occipital lobe helps us see helps us see helps us see.

The Occipital lobe helps us see everywhere we go.

The Frontal lobe helps us think helps us think helps us think.

The Frontal lobe helps us think every time at school.

The Parietal lobe helps us touch help us touch helps us touch.

The Parietal lobe helps us touch everything we touch.

Temporal lobe helps us hear helps us hear helps us hear.

The Temporal lobe helps us hear everywhere we go.

By Cellie, Tim, and Anthony

You got to see... which helps you think... and
in turn... you've got to hear... which helps
you know what you're going to feel... you

got the side, front, back, 
side to side and top,  ...

you've got the fron-tal, pa-ri-e-tal, oc-ci-pi-
tal, and tem-per-al lobes... You got to
see... which helps you think... and in
turn... you've got to hear... which helps you
know what you're going to feel.
