

For additional information, please visit VNC official documentation:

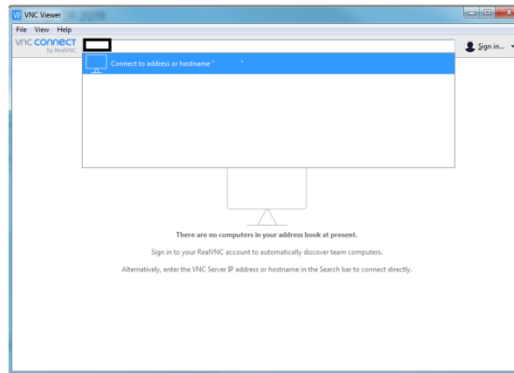

<https://www.realvnc.com/en/connect/download/viewer/>

1. **VNC viewer** is installed in the Raspbian OS by default. We need to install VNC viewer on the computing device that you wish to use to access the RPi remotely (e.g. laptop).
  - a. **[download VNC]** Go to the following URL  
<https://www.realvnc.com/en/connect/download/viewer/>
  - b. Select OS of your computing device (e.g. laptop) and click **Download VNC Viewer button**
  - c. Install VNC Viewer on your OS (complete the installation wizard)
2. Launch VNC Viewer. A startup window will display. You may wish to uncheck the option "Send anonymous usage ..." and click "Got it"

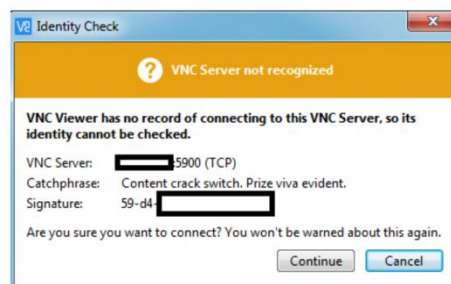

3. From the VNC interface, enter the IP address of the RPi that was sent via email. Then, select

**"Connect to address or hostname ..."**

4. When connecting for the first time, a pop-up window titled "Identity Check" will display:

Click **Continue**.

5. A new pop-up window will display requesting the username (default is 'pi' without the quotes) and password. Use the username and password that you have set/created when configuring the RPi.
