

October 21, 2003
Chapter 11.1–11.2
Feature structures

Problems with CFG

- Potentially arbitrary rules
- Gets clunky quickly with cross-cutting properties
- (Not quite powerful enough for natural languages)

Solution: Replace atomic node labels with feature structures.

*Some grammatical theories which explicitly use
feature structures and unification*

- GPSG: Generalized Phrase Structure Grammar
- HPSG: Head-driven Phrase Structure Grammar
<http://hpsg.stanford.edu>
- LFG: Lexical Functional Grammar
<http://www-lfg.stanford.edu/lfg/>
- Construction Grammar
<http://www.constructiongrammar.org/>
- Unification Categorical Grammar

Modeling language (HPSG)

Two kinds of modeling:

- Speakers' internalized grammars
- Set of possible English sentences

Modeling language (HPSG)

Three things involved in modeling:

- Real-world entities
- Models
- Descriptions of models

Feature Structure Descriptions

FEATURE ₁	VALUE ₁
FEATURE ₂	VALUE ₂
...	
FEATURE _n	VALUE _n

A Pizza Type Hierarchy

TYPE	FEATURES/VALUES	IST
<i>pizza-thing</i>		
<i>pizza</i>	$\left[\begin{array}{ll} \text{CRUST} & \{ \text{thick, thin, stuffed} \} \\ \text{TOPPINGS} & \textit{topping-set} \end{array} \right]$	<i>pizza-thing</i>
<i>topping-set</i>	$\left[\begin{array}{ll} \text{OLIVES} & \{ +, - \} \\ \text{ONIONS} & \{ +, - \} \\ \text{MUSHROOMS} & \{ +, - \} \end{array} \right]$	<i>pizza-thing</i>
<i>vegetarian</i>		<i>topping-set</i>
<i>non-vegetarian</i>	$\left[\begin{array}{ll} \text{SAUSAGE} & \{ +, - \} \\ \text{PEPPERONI} & \{ +, - \} \\ \text{BBQ CHICKEN} & \{ +, - \} \end{array} \right]$	<i>topping-set</i>

Type Hierarchies

A type hierarchy ...

- ... states what kinds of objects we claim exist (the types).
- ... organizes the objects hierarchically into classes with shared properties (the IST relations).
- ... states what general properties each kind of object has (the feature and feature value declarations).

Pizza Descriptions and Pizza Models

$$\left[\begin{array}{l} \text{pizza} \\ \text{CRUST} \quad \text{thick} \\ \text{TOPPINGS} \quad \left[\begin{array}{l} \text{vegetarian} \\ \text{OLIVES} \quad + \\ \text{ONIONS} \quad + \end{array} \right] \end{array} \right]$$

How many fully resolved pizza models satisfy this description?

Pizza Descriptions and Pizza Models

<i>pizza</i>							
CRUST	<i>thick</i>						
TOPPINGS	<table><tr><td><i>vegetarian</i></td><td></td></tr><tr><td>OLIVES</td><td>+</td></tr><tr><td>ONIONS</td><td>+</td></tr></table>	<i>vegetarian</i>		OLIVES	+	ONIONS	+
<i>vegetarian</i>							
OLIVES	+						
ONIONS	+						

{ < CRUST , thick > , < TOPPINGS , { < OLIVES , + > , < ONIONS , + > , < MUSHROOMS , - > } > }

{ < CRUST , thick > , < TOPPINGS , { < OLIVES , + > , < ONIONS , + > , < MUSHROOMS , + > } > }

Pizza Descriptions and Pizza Models

<i>pizza</i>		
CRUST	<i>thick</i>	
TOPPINGS	<i>vegetarian</i>	
	OLIVES	+
	ONIONS	+

How many pizzas-in-the-world do the pizza models correspond to?

‘type’/‘token’ distinction – applies to sentences as well

Unification

Unification

<i>pizza</i>		
CRUST	<i>thick</i>	
TOPPINGS	OLIVES	+
	ONIONS	+
	HAM	-

A Pizza Type Hierarchy

A New Theory of Pizzas

pizza : $\left[\begin{array}{ll} \text{CRUST} & \{ \text{thick , thin , stuffed} \} \\ \text{ONE-HALF} & \text{topping-set} \\ \text{OTHER-HALF} & \text{topping-set} \end{array} \right]$

Unification

$$\left[\begin{array}{l} \textit{pizza} \\ \text{ONE-HALF} \end{array} \right] \left[\begin{array}{l} \text{ONIONS} \\ \text{OLIVES} \end{array} \begin{array}{l} + \\ - \end{array} \right] \sqcup \left[\begin{array}{l} \textit{pizza} \\ \text{OTHER-HALF} \end{array} \right] \left[\begin{array}{l} \text{ONIONS} \\ \text{OLIVES} \end{array} \begin{array}{l} - \\ + \end{array} \right]$$

Unification

<i>pizza</i>					
ONE-HALF	<table><tr><td>ONIONS</td><td>+</td></tr><tr><td>OLIVES</td><td>-</td></tr></table>	ONIONS	+	OLIVES	-
ONIONS	+				
OLIVES	-				
OTHER-HALF	<table><tr><td>ONIONS</td><td>-</td></tr><tr><td>OLIVES</td><td>+</td></tr></table>	ONIONS	-	OLIVES	+
ONIONS	-				
OLIVES	+				

Identity Constraints (Tags)

<i>pizza</i>					
CRUST	<i>thin</i>				
ONE-HALF	<table><tr><td>OLIVES</td><td>1</td></tr><tr><td>ONIONS</td><td>2</td></tr></table>	OLIVES	1	ONIONS	2
OLIVES	1				
ONIONS	2				
OTHER-HALF	<table><tr><td>OLIVES</td><td>1</td></tr><tr><td>ONIONS</td><td>2</td></tr></table>	OLIVES	1	ONIONS	2
OLIVES	1				
ONIONS	2				

Unification

Unification

$$\left[\begin{array}{l} \textit{pizza} \\ \\ \text{ONE-HALF} \\ \\ \text{OTHER-HALF} \end{array} \right] \left[\begin{array}{l} \\ \\ \boxed{1} \\ \\ \boxed{1} \end{array} \right] \left[\begin{array}{l} \text{ONIONS} \\ \text{OLIVES} \\ \text{MUSHROOMS} \end{array} \right] \left[\begin{array}{l} + \\ - \\ - \end{array} \right]$$

Concepts relating to feature structures

- Underspecification
- Subsumption
 - Defines a partial-order
 - Mutual non-subsumption does not entail incompatibility
 - Mutual subsumption does entail equality
- Monotonicity
- Order independence

Feature structures as DAGs

- Features label arcs
- Nodes are associated with sub-DAGs or atomic values
- With types, each node is labeled with a type
- Identity constraints represented by reentrancy

Representing feature structures in Lisp

```
(defstruct dag  
  forward type arcs copy)
```

```
(defstruct arc  
  feature value)
```

Feature structures in the grammar

- Associate complex feature structures with both lexical items and instances of grammatical categories.
- Guide the composition of feature structures for larger grammatical constituents based on the feature structures of their component parts.
- Enforce compatibility constraints between specified parts of grammatical constructions.

Using types to capture linguistic generalizations

- The lexicon is both the repository of idiosyncrasy and full of redundancy.

- Rather than state

[VAL tr] or [SUBCAT < NP >]

on every single transitive verb,

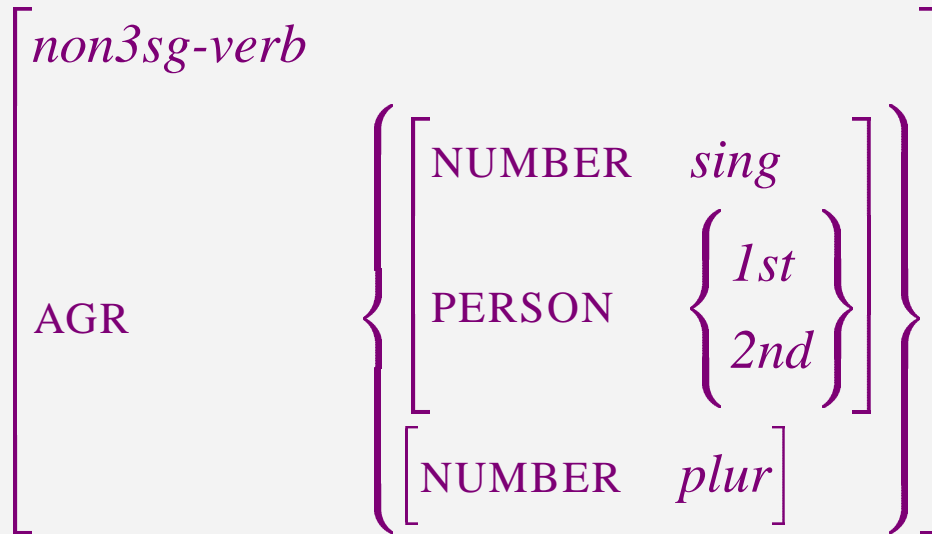

- Create a type *transitive-verb*, subject to that constraint, and let individual verbs be instances of that type.

Using types to capture linguistic generalizations

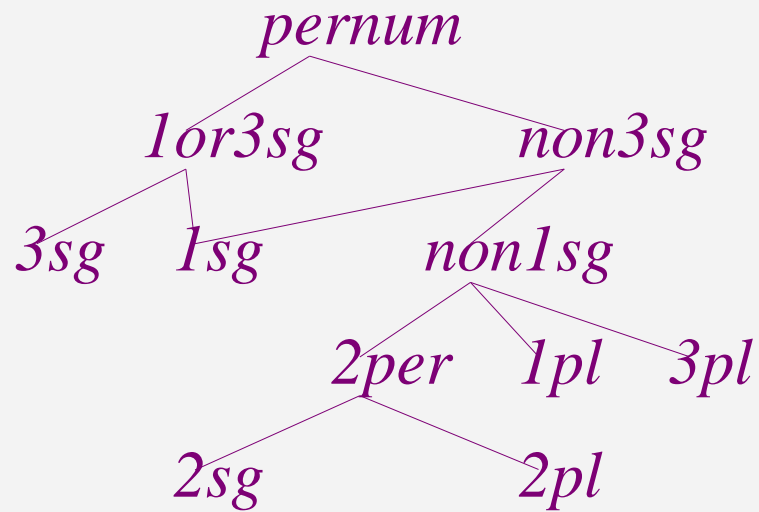

- Allow for intermediate generalizations as well:

Using types to capture linguistic generalizations

Using types to capture linguistic generalizations

Summary

- Feature structures can be used to express finer-grained details within (grammatical) categories.
- Feature structures can be combined with unification.
- Feature structures allow grammar writers to capture more generalizations.
- Types allow grammar writers to capture even more generalizations.
-

Next time

- Implementing unification
- Integrating unification into the parser
- More linguistic examples (?)
