Pro-drop with and without pronoun_n_rel

Fefor, 15 June 2006

Emily M. Bender

Kinds of pro-drop

- Subjects can go missing, subject to discourse recoverability

- Any argument can go missing, subject to discourse recoverability

- Incorporated pronouns

- Lexically licensed (in)definite null instantiation

- Constructionally licensed null instantiation

Info to record

- Agreement features (png, animateness, ...)

- Honorification

- Definiteness

- Should all of the types of null instantiation get the same representation?

- Does it matter that pro-drop in some languages corresponds to overt pronouns in others?

- Is anything lost by leaving the ARGn position unlinked to any particular nominal relation?

- What about with RMRS-style argn_rel?

- If we do put in pronouns, where do we draw the boundaries?

    - I'll bet Kim $5 to $50 that Sandy wins.

    - I'll bet

- What does the pronoun for a dropped clausal argument look like?

- Are we actually talking about different verbs?
