Binocular Rivalry (BR)

- Review of last section
- Scheduling research presentation
- Research paper
- Demos

Two eyes

- The visual signals impinging the eyes are slightly different.

Two objects to each eye

- However, we don’t notice the difference at all in our daily lives.
- We can have depth perception that leads us to perceive the world in 3D using the slight different signals from each eye.
What rivals during BR?

• Eye rivals
