## FREE Student Membership

### Did you say FREE?

The Institute of Mathematical Statistics, a unique international organization representing wide-ranging interests in statistical research, offers **FREE** membership to students. Membership includes full membership benefits:

- an annual subscription to the newsy [IMS Bulletin](#)
- reduced subscription rates to our [journals](#) and cosponsored journals. Our journals are world leaders in their fields for research and review articles.
- free [electronic access](#) to past issues of all our journals.
- discounts at our sponsored [meetings](#). The IMS sponsors a series of meetings: an Annual Meeting (usually held during the summer), regional meetings, and special topics meetings. Many of these are joint meetings with other societies. It is an excellent way in which you can be part of the worldwide statistical scientific community.
- reduced rates on other [publications](#).

### What's the catch?

It is your participation in all of IMS's varied activities that we seek; students represent the future of our field.

### Great! Tell me more about the IMS.

**Publications:** IMS publishes five journals: [Annals of Statistics](#), [Annals of Applied Statistics](#), [Annals of Probability](#), [Annals of Applied Probability](#), and [Statistical Science](#). If you are working towards a Ph.D. in statistics or probability, you will no doubt become acquainted with at least one of the specialist Annals as you begin your dissertation research. But all statistics graduate students, even first year students and those intending to pursue only a Masters Degree, will want to read the review journal Statistical Science. Statistical Science is published four times a year, and features review articles and discussion on areas in statistics of wide current interest. The journal's policy is for all articles, including those discussing advanced research topics, to be interesting and accessible to beginning statistics graduate students, without sacrificing genuine intellectual content. Statistical Science is an excellent way of keeping up with developments in all parts of the field. Another fascinating aspect of Statistical Science is its interviews with leading statisticians and probabilists, which will give you an insight into the way that our field has grown and developed.

**Meetings:** The IMS sponsors a series of [meetings](#): an Annual Meeting (usually held during the summer), regional meetings, and special topics meetings. Many of these are joint meetings with other societies. Student Members of IMS are entitled and strongly encouraged to present papers and are generally eligible for reduced registration rates. They are eligible for [Travel awards](#) that provide \$500

registration rates. They are eligible for [Local Travel Awards](#) that provide \$500 towards expenses of students attending the Annual Meeting. In addition, we have an active New Researchers Committee that sponsors special meetings every two years.

**Advertisements and advocacy:** The IMS Bulletin and this website contains numerous ads for [academic and other positions](#) worldwide. The IMS distinguishes our field by serving as an advocate for the science of statistics and probability, and your participation undoubtedly adds to the influence it can have. The IMS is the premier international statistics professional society.\* Join and find out for yourself!

\* A strong claim, perhaps, but see for example Statistical Science, February 1994, Volume 9, pp. 94-108.
