

Homework 3 – Topic model Application: What do Presidents talk about?

Use the second example in the GenSimLDA Example.py to identify the top 10 topics of President's Inaugural Addresses.

Note that I am not saying – just run a $k=10$ topic model and submit the results.

Identify the top 10 topics.

Submit two things:

1. A csv file where each row is a topic. The first column is the name of the topic. The next 10 columns are the top terms for that topic.
2. A description of how you arrived at these 10 topics, including a description of how you assessed reliability and validity
