

Science 101

Extra Credit E-post

We've spent the last 10 weeks discussing the nature of science in the context of the ID debate. So, it seems appropriate for us to offer up our best definition of "science". You might ponder some of the following questions:

- **Methodology:** What "rules" do scientists play by? Why?
- **Epistemology:** How do we come to know things scientifically?
- **Limits:** What can be approached within the realm of science?
- **Terms:** How do you define words such as "theory", "fact", "hypothesis", etc.?
- **Truth:** How do/should scientists use this word? Are facts always "true"?
How about theories?

How does ID fare with regards to your own definition of science? Where specifically are the problems?
