

Figure 5. Zonal geostrophic current relative to 2000 m (cm s^{-1}) (color shading), with overlaid (white) contours of density (σ_{θ}), averaged over 160°W - 130°W , from the Levitus climatology. Density contours are every kg m^{-3} , with supplementary dashed contours at 26.5, 27.25, and 27.5.
