The plan can still be distinctly identified... or even reversed at the local level, where the real challenge lies.

The digital revolution, by offering new ways to access information and social control, has also catalyzed the development of China’s internet. What began as a tool for Western activists and students to access banned websites has expanded into a broad range of applications. The digital revolution has spread to China. Internet and telecom services.

The government needs to lift some restrictions so companies that are already tapping into the market can offer more services. The government also needs to offer a clearer vision of the market and a timetable for reform.

Some of the best plans in China, it can still be argued that the government has not provided the right incentives and rules to ensure the generation of the expected social changes in the areas of telecoms.

In the Netherlands, landfilling is only used for 2 percent of the waste

China needs to think fast forward to becoming a leading player in internet technology
