Abstract : The questionnaire was carried out to the residents who are performing flower cultivation in beds of roadside tree in northern kyoto-city, and they were asked about aim of growing plants, evaluation of cultivation, the frequency and kinds of growing management. Consequently, it was shown by the store located in that plants cultivation in the street space in a residential area is positive, or a neighboring business district that the private management person of a store is enjoying plants cultivation. The residents who grow plants in street space announced the plant to a passerby or neighboring residents, and expecting the exchange with people who led plant cultivation was also shown. Furthermore, the questionnaire to a passerby showed that the plant which neighboring residents grew was bearing a wing, which forms the green of a town, and the necessity for the plant cultivation support by administration was suggested.

Keywords: *roadside tree, passerby, flower cultivation, street space, planting bed*
