

A review article by Chopra & Roberts was published in *Microbiol. Mol. Bio. Rev.* 65:232-260. Most of the tables are modifications from this article. A new gene must have  $\leq 79\%$  amino acid identity with all previous characterized *tet* genes. Dr. Stuart Levy from Tufts is the clearinghouse for naming new *tet* genes. Before you submit sequences to GenBank or submit a manuscript for publication please contact Laura McMurry in Dr. Levy's laboratory at [laura.mcmurry@tufts.edu](mailto:laura.mcmurry@tufts.edu). You will be asked to fill out a form with all the relevant information. A name will then be assigned which should be used when submitting a sequence to GenBank or submitting a manuscript for publication. Also please send preprints and GenBank numbers to Dr. Marilyn C., Roberts, [marilynr@u.washington.edu](mailto:marilynr@u.washington.edu), so that this information can be added to the tables. If you have any corrections or additions to these tables please contact Dr. Roberts by E-mail.
