DNA

DNA = Ticker Tape?

DNA to RNA

Electron micrograph below shows many molecules of RNA polymerase simultaneously transcribing two genes.

Individual RNA polymerases are visible as dots along the DNA. New RNA (fine threads) are attached to them.

Lengths of new RNA indicates that DNA is read from left to right (3' to 5' of DNA)

Central Dogma

Central Players

Central Dogma

DNA Replication

(DNA Polymerase)
Reads DNA 3' → 5'
Makes DNA 5' → 3'

Central Dogma

Transcription

(RNA Polymerase II)

Reads DNA $3' \rightarrow 5'$
Makes RNA $5' \rightarrow 3'$

The Genetic Code

Proteomic Numbers

- Proteome: final product of gene expression
 - A cell has 10,000-20,000 different proteins
 - For each protein: 20,000 – 100 million copies per cell
 - 2,000 housekeeping proteins (>50,000 copies)

Genetic Code

- What if...
 - 1 base pair encoded 1 protein?
 - 2 base pairs encoded 1 protein?
 - 3 base pairs encoded 1 protein?

When is a cell like a computer?
