

funding issues / public policy / publicity

funding issues

separate funding for reproducibility -- baked into current practice?

supply templates for data management plan to include open and available software

encourage NSF etc. to list reproducibility as specific examples of “broader impact to research”

funding issues / public policy / publicity

public policy

how to demonstrate that reproducibility is a 'more productive way to do science' -- Dave Donoho

principled approaches to programming (early career training workshops - e.g. project NExT)

“set the default to open” statements (from professional organizations)

funding issues / public policy / publicity

publicity

compilation of positive 'stories' in support of reproducibility

difference between building a telescope and making data / code open and available

is open source the basis of open science?
