Derivatives of Inverses

While working in a group make sure you:

- Expect to make mistakes but be sure to reflect/learn from them!
- Are civil and are aware of your impact on others.
- Assume and engage with the strongest argument while assuming best intent.

1. Find $\frac{d}{dx}(\arccos(5x - x^3))$.

2. Using techniques that we used to find $\frac{d}{x}(\arccos(x))$ to find $\frac{d}{x}(\arcsin(x))$

3. Use the conclusions from above to find $(\arcsin(2^x x^5))'$.

Summary of the derivatives of many of our familiar functions from pg 177 of text:
