

Limits

While working in a group make sure you:

- Expect to make mistakes but be sure to reflect/learn from them!
- Are civil and are aware of your impact on others.
- Assume and engage with the strongest argument while assuming best intent.

1. Consider $f(x) = \frac{2x^2 + 4x}{x + 2}$.

(a) Fill in the following table:

x	-3	-2.1	-2.01	-2	-1.99	-1.9	-1
$f(x)$							

(b) Use the data above to find $\lim_{x \rightarrow -2} f(x)$.

(c) Draw the graph of f on the axis below and verify your answer.

2. Let g be the piece-wise defined function below. This means the graph of g is the *entire* dotted graph shown below.

- (a) Find the following *if* it exists:

$$\lim_{x \rightarrow 1} g(x)$$

$$\lim_{x \rightarrow 0} g(x)$$

$$\lim_{x \rightarrow 3} g(x)$$

$$\lim_{x \rightarrow 2} g(x)$$

$$\lim_{x \rightarrow -2} g(x)$$

$$\lim_{x \rightarrow -3} g(x)$$

3. Sketch a graph of a function α that satisfies *all* of the following:

$$\alpha(-1) = 2, \quad \lim_{x \rightarrow -1} \alpha(x) = -3, \quad \lim_{x \rightarrow 2} \alpha(x) = -3, \quad \text{and the } \lim_{x \rightarrow 4} \alpha(x) \text{ does not exist.}$$
