## Dot Products

Some Properties: If  $\overrightarrow{a}$ ,  $\overrightarrow{b}$  and  $\overrightarrow{c}$  are vectors in a vectors space V, and c is a scalar, then

- $\overrightarrow{a} \cdot \overrightarrow{a} = ||\overrightarrow{a}||^2$ •  $\overrightarrow{a} \cdot \overrightarrow{b} = \overrightarrow{b} \cdot \overrightarrow{a}$ •  $\overrightarrow{a} \cdot (\overrightarrow{b} + \overrightarrow{c}) = \overrightarrow{a} \cdot \overrightarrow{b} + \overrightarrow{a} \cdot \overrightarrow{c}$
- $(c\overrightarrow{a})\cdot\overrightarrow{b} = c(\overrightarrow{a}\cdot\overrightarrow{b}) = \overrightarrow{a}\cdot(c\overrightarrow{b})$

• 
$$\overrightarrow{0} \cdot \overrightarrow{a} = \overrightarrow{0}$$

While working in a group make sure you:

- Expect to make mistakes but be sure to reflect/learn from them!
- Are civil and are aware of your impact on others.
- Assume and engage with the strongest argument while assuming best intent.

1. Let 
$$\overrightarrow{v} = 2\overrightarrow{i} + 2\overrightarrow{j} - \overrightarrow{k}$$
 and  $\overrightarrow{w} = \langle 3, -2 \rangle$ . Find (if possible):  
(a)  $(\overrightarrow{v} \cdot \overrightarrow{j}) \cdot \overrightarrow{k}$ 

(b)  $||\overrightarrow{v}||$ 

(c) 
$$\overrightarrow{v} \cdot \overrightarrow{w}$$

2. For each  $\overrightarrow{v}$  and  $\overrightarrow{w}$ , determine if the two vectors are parallel, perpendicular, or neither. Note that "orthogonal" and "normal" are alternatives to the word "perpendicular".

• 
$$\overrightarrow{v} = \langle 2, 2, -1 \rangle$$
 and  $\overrightarrow{w} = \langle 5, -4, 2 \rangle$ 

• 
$$\overrightarrow{v} = \langle 3, 7, -\frac{1}{2} \rangle$$
 and  $\overrightarrow{w} = \langle -1, -\frac{7}{3}, \frac{1}{6} \rangle$ 

3. Consider a 10 gram block on a ramp that has a  $30^{\circ}$  angle of elevation. What force must friction have to keep the block from moving?
