Group Member Assessment

Recall that one fourth of the marks for the written discussion portion of Project 2 is determined by the group members.

Each member of the group will turn in the following form where they can distribute the "Total" points available in a manner that they deem fair and reflective of the group dynamic that they experienced.

Detailed Instructions

1) Specify the members of your group below. (Including yourself.)

2) Count up the number of people in each group (call it n) and multiply by 18.

       This will be the "Total" points that you can assign.

3) For each member, indicate

       a) your perceived level of involvement on a scale between 0 and 9*n

       b) your perceived level of contributions on scale between 0 and 9*n

Details about the range of numbers to assign:

       Each member's points must be an integer greater than 0.

       Members may grant point values over 10 if they think it is fitting.

       If evenly divided, each member would earn 9 points in each category.

       It is possible for a member to be very involved (e.g. attend all meetings and work with the group) but not contribute any answers. Similarly, it is possible that a member may not be involved but have answers.
