## Quiz 2

Show *all* your work. No credit is given without reasonable supporting work. There are *two* sides to this quiz.

1. Let  $f(x) = \frac{3}{\sqrt{x-4}}$ .

- (a) [2] (WebHW3 #15) Find the domain of  $f$ .

$\textcircled{+S}$  denominator can't equal zero AND  $\textcircled{+S}$  no negatives under sqrt

$$\sqrt{x-4} \neq 0$$

$$\textcircled{+S} x-4 \neq 0$$

$$x \neq 4$$

AND

$$x-4 \geq 0$$

$$\textcircled{+S} x \geq 4$$

- So  $x > 4$  or  $(4, \infty)$

- (b) [1] ( $\S 1.3$  #32) Find  $f(x+8)$ .

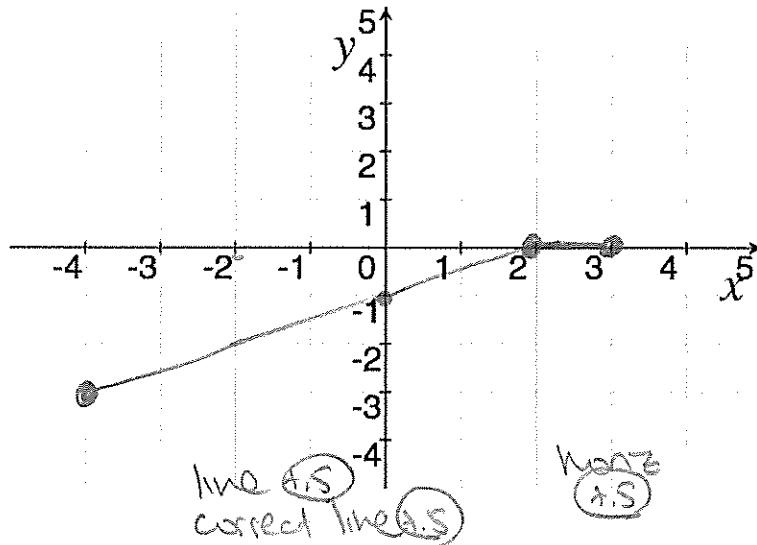

$$f(x+8) = \frac{3}{\sqrt{x+8-4}} = \frac{3}{\sqrt{x+4}}$$

$\textcircled{+S}$

2. [2] (WebHW4 #4)

Graph  $l(x) = \begin{cases} \frac{1}{2}x - 1 & \text{if } -4 \leq x \leq 2 \\ 0 & \text{if } 2 < x \leq 3 \end{cases}$

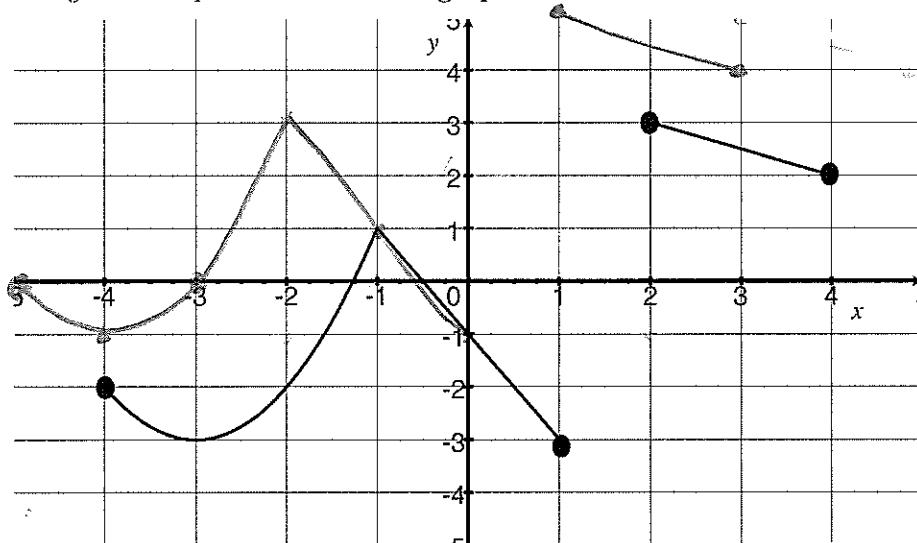

domains  $\textcircled{+S}$

line  $\textcircled{+S}$   
correct line  $\textcircled{+S}$

wrong  
 $\textcircled{+S}$

3. Let  $g$  be the piecewise defined graph shown below.

- (a) [1] (§1.3 #56) Estimate  $g(1)$  =  $y$ -value if  $x = 1$   
 $-3$

- (b) [2] (TransformationWks #5) Find the range of  $g$ .  $\text{(+,5)}$

$y$ -values: ~~range between~~  $-3$  up to  $1$   
 $\text{(+,5)}$  Then between  $2$  and  $3$   $\text{(+,5)}$

- (c) [2] (TransformationWks #5) Let  $m(x) = g(x + 1) + 2$ . Graph  $m(x)$  on the set of axes.  $\text{see the break (+,5)}$

$\downarrow$   
 shift up 2 units  $\text{(+,5)}$   
 $\downarrow$   
 shift left 1 unit  $\text{(+,5)}$   
 did it  $\text{(+,5)}$   $\checkmark$
