

tc core 122: Quiz 4

Key

x	22.5°	30°	45°	60°	67.5°	135°
$\cos(x)$	$\frac{\sqrt{2+\sqrt{2}}}{2}$	$\frac{\sqrt{3}}{2}$	$\frac{\sqrt{2}}{2}$	$\frac{1}{2}$	$\frac{\sqrt{2-\sqrt{2}}}{2}$	$-\frac{\sqrt{2}}{2}$
$\sin(x)$	$\frac{\sqrt{2-\sqrt{2}}}{2}$	$\frac{1}{2}$	$\frac{\sqrt{2}}{2}$	$\frac{\sqrt{3}}{2}$	$\frac{\sqrt{2+\sqrt{2}}}{2}$	$\frac{\sqrt{2}}{2}$
$\tan(x)$	$\sqrt{\frac{2-\sqrt{2}}{2+\sqrt{2}}}$	$\frac{1}{\sqrt{3}}$	1	$\sqrt{3}$	$\sqrt{\frac{2+\sqrt{2}}{2-\sqrt{2}}}$	-1

1. (Wheater §10.1) Use the triangle ABC and find the following:

Schrittplan

(a) [1] $\sin \angle C$

$$\frac{\text{opp}}{\text{hyp}} = \frac{10}{12} = \frac{5}{6} \approx .833$$

(b) [1] $\cos \angle A$

$$\frac{\text{adj}}{\text{hyp}} = \frac{10}{12} = \frac{5}{6} \approx .833$$

(c) [2] the length of BC

n.r. $10^2 + BC^2 = 12^2$ (+1)
 $\Rightarrow BC^2 = 144 - 100 = 44$ So $BC = \sqrt{44}$
 ≈ 6.63

(d) [1] $\tan \angle C$

$$\frac{\text{opp}}{\text{adj}} = \frac{10}{\sqrt{44}} \approx 1.505$$

(e) [1] the measure of angle B

90° (+1) (reading rotation)

2. [4] (Wheater §10.2) A kite string attached to the ground makes an angle of 67.5° with the ground. When the full 500 ft of string has been played out, how high is the kite?

draw picture (+1)

want: opp } use sine (+1)
 have: hyp

$$\sin 67.5 = \frac{\text{height}}{500} \quad (+1)$$

$$\text{height} = 500 \cdot \sin 67.5 = 500 \cdot \frac{\sqrt{2+\sqrt{2}}}{2}$$

$$\begin{aligned} & \text{adj } (+1) \\ & = 250(\sqrt{2+\sqrt{2}}) \\ & \approx 461.94 \end{aligned}$$

3. [3] (textbook) Lang's chapter five is called "Splitting Points". Explain what point-splitting is.

A way "to convert one flap into two, three, or more flaps by folding alone" Pg 93

For example, one flap  can be modified through fiddly (and not cutting) into two flaps  through a process called the Yoshizawa split.

4. [2] (Lang) What might a person use point-splitting for when designing an origami pattern?

This is a great way of modifying a base to create new patterns? Yoshizawa often used ~~his~~ this split to make ears on the head of one of his patterns. Lang used a split for the Pteranodon's head and tail, but does use a great use of the split as well.

5. [3] (5/7 lecture) Identify two online resources that the library has made available for math students (note: this includes people from this class!).

Databases? (Titan JStor, MathSciNet?)
 Class guide (for this class even?) [includes brief biographies assigned]
 Chat with a Librarian service [on a live line]
~~Library~~

6. [2] Identify what helped you the most when folding the Valentine/Hummingbird. Do you think this would be helpful in other contexts (i.e. writing up worksheets, writing papers, completing homework sets for physics, performing labs in chemistry, etc...)?

	helpful in other contexts?	Yes	No
