1. [6] TRUE/FALSE: Let $f$ and $g$ be functions. Circle T in each of the following cases if the statement is always true. Otherwise, circle F.

T $\quad \mathrm{F} \quad x+\frac{1}{x}=\frac{x^{2}+1}{x}$
T $\quad \mathrm{F} \quad \sqrt{x}=x^{\frac{1}{2}}$
$\mathrm{T} \quad \mathrm{F} \quad$ If $\lim _{x \rightarrow a} g(x)=0$ then $\lim _{x \rightarrow a} \frac{f(x)}{g(x)}$ does not exist.
$\mathrm{T} \quad \mathrm{F}$ If $f$ and $g$ are differentiable functions where $f^{\prime}(1)=2$, and $g^{\prime}(1)=3$, then $(f g)^{\prime}(1)=6$.
$\mathrm{T} \quad \mathrm{F}$ If $f$ is differentiable at $a$, then $f$ is continuous at $a$.
T $\mathrm{F} \quad\left(2^{x}\right)^{\prime}=2^{x}$.

Show your work for the following problems. The correct answer with no supporting work will receive NO credit (this includes multiple choice questions).
2. [5] (PracticeExam \#3) Write a function $\alpha(x)$, that satisfies all of the following:
(a) $\lim _{x \rightarrow-\infty} \alpha(x)=3$,
(b) $\alpha$ is not differentiable at $x=2$,
(c) $\alpha$ is continuous at $x=2$,
(d) $\alpha^{\prime}(0)$ is negative
3. Let $h$ be the piece-wise defined function comprised of two line segments and a parabola shifted horizontally shown below and to the right. Let $f$ be a continuous function with the characteristics described below. Find the following, if possible.
$f(-1)=-3$
$f(4)=5$
$f^{\prime}(-1)=-2$
$f^{\prime}(4)=1$

(a) $\left.[1] \frac{d}{d x}(h(x))\right|_{x=0}$
[3] (Product Wks \#1)
$(f h)^{\prime}(-1)$
[3] PracticeExam \#5 $(f \circ h)^{\prime}(-1)$
[3] (§3.2 \#44)
$\left.\frac{d}{d x}\left(\frac{f(x)}{3+h(x)}\right)\right|_{x=-1}$
(b) [3] (Quiz3 \#2) The linearization of $f$ at $x=2$
4. Find each of the following.

[2] (WebHW9 \#8)
$\frac{d}{d x}\left(6^{15 x)}\right)$
[4] (implicit wks \#1)
$\left(\sin ^{5}(x) \sqrt{x^{3}-5}\right)^{\prime}$
[4] (PracticeExam \#6)
$\frac{d}{d y}\left(\frac{\sin (y)+y \cos (y)}{\cos (y)}\right)$
5. The graph of the equation $2 y^{3}+y^{2}-y^{5}=x^{4}-2 x^{3}+x^{2}$ without the the axis has been described as a bouncing wagon.

(a) [4] (implicit Wks \#1)

Find $\frac{d y}{d x}$ as a function of $x$ and $y$ of the bouncing wagon shown to the right.
6. (WebHW9 \#6) A mass on a spring vibrates horizontally on a smooth level surface with the equation $x(t)=10 \cos (2 x)$ where $t$ is in seconds and $x$ is in centimeters.
(a) [2] Find the velocity of the spring at time $t$.

(b) [3] When is the spring at rest?
7. Choose $O N E$ of the following. Clearly identify which of the two you are answering and what work you want to be considered for credit. No, doing both questions will not earn you extra credit.
(a) $(\S 3.9 \# 20)$ A boat is pulled into a dock by a rope attached to the bow of the boat and passing through a pulley on the dock that is 1 m higher then the bow of the boat. The rope is being pulled in at a rate of $2 \mathrm{~m} / \mathrm{s}$.
i. [3] Find an equation relating the speed of the boat to other variables.
ii. [2] How fast is the boat approaching the dock when it is 5 m from the dock?
(b) (WordWks2 \#12) Consider a ladder 12ft long leaning against a vertical wall where the bottom of the ladder is sliding away front the wall at a rate of $1 \mathrm{ft} / \mathrm{s}$.
i. [3] Find an equation relating the speed that the angle between the ladder and the ground to other variables.
ii. [2] how fast is the angle between the latter and the ground changing when the bottom of the latter is 6 ft from the wall?
