b) $\left\{ \begin{pmatrix} a & 0 \\ 0 & b \end{pmatrix} \mid ab \neq 0 \text{ \& } a, b \in \mathbb{R} \right\}$ \star is matrix multiplication																																																																																		
b) $\{(x, y) \in \mathbb{R}^2 \mid y^2 = 3x^3 + 5x^2 + 1\}$ (graph shown to the right) \star Let $P, Q \in S$. If $P \neq Q$ draw the line between P & Q . The line will intersect with S at a third point, call it C . Then $P \star Q = C$ If $P = Q$, draw the line tangent to the curve. The tangent line will intersect S at a second point, call it C . Then $P \star Q = C$																																																																																		

Free Response: Show your work for the following problems. The correct answer with no supporting work will receive NO credit.

(If you use a calculator, be sure to tell me.)

6. (§3) Let G be a group and $g \in G$.

(a) [2] Which is larger: the order of G or the order of g . Justify your answer.

(b) [3] When is $|G| = o(g)$? (In Gallian's notation: $|G| = |g|$.) Justify your answer.

7. [6] (§3) Let G be an Abelian group with identity e and let m be a fixed integer. Show the set of all elements in G that are solutions to $x^m = e$ is a subgroup of G . In symbols show that $\{g \in G | g^m = e\} \leq G$.

8. (§4) Let $G = \mathbb{Z}_{338}$ under addition modulo 60.

(a) [1] Find $|G|$.

(b) [3] List three elements of order 26 in G .

(c) [4] Write down the subgroup lattice for \mathbb{Z}_{338}

Writing Focus

This section is to be taken home, completed, and turned in by 12:50 Tuesday Feb 9th. You may discuss this problem with anyone else from the class. You may not consult anyone or any resource that is not affiliated with the class. That is, you may use the textbook and your classmates as a resource but you may not use other textbooks, the internet, or tutors.

Your answer may be typed or written. Answers will be evaluated as a completed, polished *proof*. Assume the audience are your peers in the class but write as you would for a published proof. An approximate rubric is given below.

- [1] correctness
- [2] generality/abstraction
- [1] notation
- [2] logic
- [2] style
- [2] TBD

9. [10] Let G be a finite group with more than one element. Show that G has an element of prime order.
