

SABIN IN THE MEDIA:

My research has received extensive national and international attention. I have experience managing public relations, press releases, and live interviews with National Public Radio, Reuters, the Los Angeles Times, the Seattle Post Intelligencer, and other high-profile media outlets. My research has been featured nationally on MSNBC, ABC, Seattle's King 5 News, The Huffington Post, The Washington Post, Fox News, Kaiser Family Foundation Research, and internationally in media outlets in Canada, Great Britain, Australia, India, Turkey, and interestingly, Press TV Iran.

Please note: Although the media tends to sensationalize the topic of unconscious bias in health care, I take great care to present and interpret the science in these interviews. Unfortunately, I have no control over the headline of the articles and photos used.
