

## Translation

FOE (“First-order English”) is an artificial language whose syntactic and semantical rules are based on those of the uninterpreted first-order language FOL (“First-order Logic”), as described in a [separate handout](#). The difference between FOL and FOE is that the non-logical vocabulary of FOE — its names and predicates — are interpreted, rather than uninterpreted, symbols. FOE is thus a **first-order interpreted language**. What follows is a guide to translating between English and FOE. We will list the vocabulary of a fragment of FOE and then indicate its English interpretation. Finally, we will write some sentences in FOE, along with their translations into colloquial English.

### Syntax

#### Names

elly, gary, heidi, herschel, orfy, willy, 2:00, 2:01, 2:02 ....

#### Predicates

Person(x), Pet(x), Dog(x), Cat(x), Chases(x, y), LargerThan(x, y), Loves(x, y),  
Fed(x, y, z),  $x < y$ .

### Semantics

FOE	English
heidi	<i>Heidi</i>
orfy	<i>Orfy</i>
herschel	<i>Herschel</i>
willy	<i>Willy</i>
gary	<i>Gary</i>
elly	<i>Elly</i>
2:00	<i>2 pm, January 1, 2008</i>
2:01	<i>2:01 pm, January 1, 2008</i>
...	...
Person(x)	<i>x is a person</i>
Pet(x)	<i>x is a pet</i>
Dog(x)	<i>x is a dog</i>
Cat(x)	<i>x is a cat</i>
Chases(x, y)	<i>x chases y</i>
Larger(x, y)	<i>x is larger than y</i>
Loves(x, y)	<i>x loves y</i>
Fed(x, y, z)	<i>x fed y at (time) z</i>
$x < y$	<i>x is earlier than y</i>

## Some Easy Translations

FOE	English
$\text{Cat}(\text{herschel}) \wedge \text{Cat}(\text{orfy})$	<i>Herschel is a cat and Orfy is a cat.</i>
$\text{Dog}(\text{heidi}) \wedge \text{Dog}(\text{willy})$	<i>Heidi and Willy are dogs.</i>
$\text{Loves}(\text{heidi}, \text{gary})$	<i>Heidi loves Gary.</i>
$\text{Fed}(\text{gary}, \text{heidi}, 2:00)$	<i>Gary fed Heidi at 2 pm.</i>
$\neg(\text{Dog}(\text{orfy}) \wedge \text{Dog}(\text{willy}))$	<i>Not both Orfy and Willy are dogs.</i>
$\neg(\text{Cat}(\text{willy}) \vee \text{Cat}(\text{heidi}))$	<i>Neither Willy nor Heidi is a cat.</i>
$\text{Dog}(\text{willy}) \rightarrow \neg\text{Person}(\text{willy})$	<i>If Willy is a dog, then he isn't a person.</i>
$\exists x (\text{Pet}(x) \wedge \text{Dog}(x))$	<i>Some pets are dogs.</i>
$\exists x (\text{Pet}(x) \wedge \text{Cat}(x))$	<i>Some cats are pets.</i>
$\forall x (\text{Pet}(x) \rightarrow (\text{Dog}(x) \vee \text{Cat}(x)))$	<i>Every pet is either a dog or a cat.</i>
$\forall x (\text{Dog}(x) \rightarrow \neg\text{Cat}(x))$	<i>No dog is a cat.</i>
$\neg\exists x (\text{Dog}(x) \wedge \text{Cat}(x))$	<i>No dog is a cat.</i>
$\forall x (\text{Cat}(x) \rightarrow \text{Larger}(\text{willy}, x))$	<i>Willy is larger than every cat.</i>
$\neg\exists x \text{Fed}(\text{elly}, \text{willy}, x)$	<i>Elly has never fed Willy.</i>

## Some Harder Translations

$\exists x (\text{Person}(x) \wedge \exists y (\text{Fed}(x, \text{orfy}, y) \wedge y < 2:30))$	<i>Someone fed Orfy before 2:30.</i>
$\exists x \exists y (\text{Fed}(\text{gary}, \text{heidi}, x) \wedge \text{Fed}(\text{elly}, \text{herschel}, y) \wedge x < y)$	<i>Gary fed Heidi before Elly fed Herschel.</i>
$\exists x \exists y (\text{Fed}(\text{elly}, \text{orfy}, x) \wedge \text{Fed}(\text{elly}, \text{herschel}, y) \wedge x < y)$	<i>Elly fed Orfy before (she fed) Herschel.</i>
$\forall x (\text{Dog}(x) \rightarrow \exists y (\text{Cat}(y) \wedge \text{Chases}(x, y)))$	<i>Every dog chases some cat (or other).</i>
$\exists y (\text{Cat}(y) \wedge \forall x (\text{Dog}(x) \rightarrow \text{Chases}(x, y)))$	<i>There is a (particular) cat that every dog chases.</i>
$\exists x (\text{Dog}(x) \wedge \forall y (\text{Cat}(y) \rightarrow \text{Larger}(x, y)))$	<i>Some dog is larger than every cat.</i>
$\forall x ((\text{Dog}(x) \wedge \forall y (\text{Cat}(y) \rightarrow \text{Larger}(x, y))) \rightarrow \text{Loves}(\text{gary}, x))$	<i>Gary loves any dog who is larger than every cat.</i>
$\exists x \exists y (\text{Cat}(x) \wedge \text{Cat}(y) \wedge \neg(x=y))$	<i>There are at least two cats.</i>
$\forall x \forall y ((\text{Dog}(x) \wedge \text{Larger}(x, \text{heidi}) \wedge \text{Dog}(y) \wedge \text{Larger}(y, \text{heidi})) \rightarrow x=y)$	<i>There is at most one dog larger than Heidi.</i>
$\text{Dog}(\text{willy}) \wedge \forall y ((\text{Dog}(y) \wedge \neg(y=\text{willy})) \rightarrow \text{Larger}(\text{willy}, y))$	<i>Willy is the largest dog.</i>
