

CONTENTS

Preface	vii
I. INTRODUCTION	1
A. Interfaces	1
B. Colloids	4
C. The bridge to nanoscience	10
1. <i>What is “nanoscience?”</i>	10
2. <i>Nanostructures and assemblies</i>	12
3. <i>Generic nanoscience</i>	17
4. <i>New tools of generic nanoscience</i>	18
5. <i>The plan</i>	22
II. FLUID INTERFACES AND CAPILLARITY	23
A. Fluid interfaces: Young’s membrane model	23
1. <i>The thinness of interfaces</i>	23
2. <i>Definition of surface tension</i>	25
B. The surface tension of liquids	26
1. <i>Pure liquids</i>	26
2. <i>Temperature dependence of surface tension</i>	27
3. <i>Surface tension of solutions</i>	29
C. Intermolecular forces and the origin of surface tension	31
1. <i>Van der Waals forces</i>	31
2. <i>Surface tension as “unbalanced” intermolecular forces; the Hamaker constant</i>	35
3. <i>Pressure deficit in the interfacial layer; Bakker’s equation</i>	37
4. <i>Components of the surface tension</i>	41
D. Interfacial tension	43
1. <i>Experimental interfacial tension</i>	43
2. <i>Combining rules for interfacial tension</i>	43
E. Dynamic surface tension	46
F. Capillary hydrostatics: the Young-Laplace Equation	46
1. <i>Capillary pressure: pressure jump across a curved fluid interface</i>	46
2. <i>The curvature of a surface</i>	48
3. <i>Derivation of the Young-Laplace equation</i>	53
4. <i>Boundary conditions for the Young-Laplace equation</i>	55
G. Some solutions to the Young-Laplace equation	57
1. <i>Cylindrical surfaces; meniscus against a flat plate</i>	57
2. <i>Axisymmetric and other surfaces</i>	59

3. <i>Nondimensionalization of the Young-Laplace equation; the Bond number</i>	59
4. <i>Saddle-shaped surfaces</i>	62
H. The measurement of surface and interfacial tension	64
1. <i>Geometric vs. force methods</i>	64
2. <i>Capillary rise</i>	65
3. <i>Sessile drop and pendant drop</i>	68
4. <i>Du Noüy ring detachment</i>	68
5. <i>Wilhelmy slide</i>	69
6. <i>Langmuir film balance</i>	70
7. <i>Drop weight (or volume)</i>	71
8. <i>Maximum bubble pressure and dynamic surface tension</i>	72
9. <i>The pulsating bubble “surfactometer”</i>	74
10. <i>Elliptical (vibrating) jet</i>	74
11. <i>Contracting circular jet</i>	75
12. <i>Problems with interfacial tension measurement</i>	75
13. <i>Spinning drop method</i>	76
I. Forces on solids in contact with liquids: capillary interactions	76
1. <i>Liquid bridges</i>	76
2. <i>Shared menisci</i>	80
J. Effect of curvature on the equilibrium properties of bulk liquids: the Kelvin Effect	84
1. <i>The vapor pressure of small droplets and liquids in pores</i>	84
2. <i>The effect of curvature on boiling point</i>	86
3. <i>Capillary condensation</i>	86
4. <i>Nucleation</i>	88
K. Thin liquid films	91
1. <i>Disjoining pressure and its measurement</i>	91
2. <i>The molecular origin of disjoining pressure</i>	94
3. <i>The disjoining pressure isotherm</i>	98
4. <i>The augmented Young-Laplace equation</i>	101
SOME FUN THINGS TO DO: CHAPTER 2	103
III. THERMODYNAMICS OF INTERFACIAL SYSTEMS	107
A. The thermodynamics of simple bulk systems	107
1. <i>Thermodynamic concepts</i>	107
2. <i>The simple compressible system</i>	108
B. The simple capillary system	110
1. <i>The work of extension</i>	110
2. <i>Heat effects; abstract properties; definition of boundary tension</i>	111
C. Extension to fluid-solid interfacial systems	114
1. <i>The work of area extension in fluid-solid systems</i>	114
2. <i>Compound interfacial systems; Young’s equation</i>	116
D. Multicomponent interfacial systems	119
1. <i>The Gibbs dividing surface and adsorption</i>	119

2. <i>Immiscible interfacial systems</i>	123
3. <i>The measurement of adsorption</i>	124
4. <i>The phase rule; descriptive equations for binary interfacial systems</i>	127
E. The Gibbs adsorption equation	128
F. Surface tension of solutions	134
1. <i>Ideal-dilute capillary systems</i>	134
2. <i>Moderately dilute capillary systems</i>	135
G. Surface active agents (surfactants) and their solutions	137
1. <i>The structure of different types of surface active agents</i>	137
2. <i>Solutions of non-electrolyte surfactants</i>	144
3. <i>Solutions of electrolyte surfactants</i>	147
H. Self-assembly of surfactant monomers in solution	148
1. <i>Formation of micelles: critical micelle concentration (CMC)</i>	148
2. <i>Solubilization</i>	160
I. Micelle morphology, other self-assembled structures, and concentrated surfactant solutions	164
1. <i>Micellar shape and the Critical Packing Parameter (CPP)</i>	164
2. <i>Beyond micelles: other self-assembled structures</i>	166
3. <i>Concentrated surfactant solutions; liquid crystalline mesophases</i>	170
4. <i>Kinetics of micellization and other self-assembly processes</i>	171
J. Dynamic surface tension of surfactant solutions	171
1. <i>Diffusion-controlled adsorption</i>	171
2. <i>Finite adsorption-desorption kinetics</i>	175
K. Insoluble (Langmuir) monolayers	176
1. <i>Formation of monolayers by spontaneous spreading</i>	176
2. <i>Hydrodynamic consequences of monolayers: Gibbs elasticity</i>	177
3. <i>π-A isotherms of insoluble monolayers</i>	178
4. <i>Langmuir-Blodgett films</i>	182
5. <i>Transport properties of monolayers</i>	184
L. The thermodynamics of fluid-solid interfacial systems revisited	186
1. <i>The concept of interfacial energy and its measurement in fluid-solid systems</i>	186
2. <i>Adsorption of non-polymeric molecules at the solid-liquid interface</i>	191
3. <i>Experimental measurement of small molecule solid-liquid adsorption</i>	201
4. <i>Adsorption of polymers at the solid-liquid interface</i>	202
SOME FUN THINGS TO DO: CHAPTER 3	207
IV. SOLID-LIQUID INTERACTIONS	214
A. Wettability and the contact angle: Young's Equation	214
1. <i>Importance of wetting; definition of contact angle</i>	214

2. <i>Young's equation revisited; classification of wetting and contact angle values</i>	216
B. Contact angle hysteresis	218
1. <i>Origins of hysteresis: roughness and heterogeneity</i>	218
2. <i>Complexity of real surfaces: texture and scale</i>	221
3. <i>Wenzel equation for rough surfaces</i>	223
4. <i>Cassie-Baxter analysis of heterogeneous surfaces; composite surfaces and ultra-hydrophobicity</i>	224
5. <i>The dynamic contact angle; Tanner's law</i>	227
C. Methods for measuring the contact angle	229
1. <i>Optical or profile methods: contact angle goniometry</i>	229
2. <i>Force methods: contact angle tensiometry</i>	231
3. <i>Dynamic contact angle measurement</i>	235
D. Relation of wetting behavior to surface chemical constitution	236
1. <i>Zisman plots; the critical surface tension</i>	236
2. <i>The wettability series</i>	238
3. <i>Estimates of surface energies from contact angle data or vice versa</i>	239
4. <i>Thermodynamics of solid-liquid contact: work of adhesion, work of wetting and work of spreading; the Young-Dupré equation</i>	243
5. <i>The promotion or retardation of wetting: practical strategies</i>	245
E. Spreading of liquids on solid surfaces	250
1. <i>Criteria for spontaneous spreading; spreading morphology</i>	250
2. <i>Temperature effects of wetting; heats of immersion and wetting transitions</i>	254
3. <i>The kinetics of spreading on smooth surfaces</i>	255
4. <i>Spreading agents; superspreaders</i>	257
F. The relationship of wetting and spreading behavior to adhesion	258
1. <i>Definition of adhesion; adhesion mechanisms</i>	258
2. <i>The "Laws of Molecular Adhesion"</i>	259
3. <i>"Practical adhesion" vs. "thermodynamic adhesion"</i>	261
4. <i>The importance of wetting (contact angle) to practical adhesion</i>	263
5. <i>The optimization of thermodynamic contact adhesion</i>	264
6. <i>Acid-base effects in adhesion</i>	267
7. <i>Contact mechanics; the JKR method</i>	272
G. Heterogeneous nucleation	277
H. Processes based on wettability changes or differences	279
1. <i>Detergency</i>	279
2. <i>Flotation</i>	280
3. <i>Selective or "spherical" agglomeration</i>	281
4. <i>Offset lithographic printing</i>	282
I. Wicking flows (capillary action) and absorbency	284
1. <i>Wicking into a single capillary tube</i>	284

2. <i>Wicking in porous media</i>	286
3. <i>Practical strategies for promoting absorbency</i>	290
4. <i>Immiscible displacement</i>	292
5. <i>Mercury porosimetry</i>	292
6. <i>Motion of liquid threads</i>	293
7. <i>Surface wicking; spreading over rough or porous surfaces</i>	295
J. <i>Particles at interfaces</i>	297
1. <i>Particles at solid-fluid interfaces: effects on wetting and spreading</i>	297
2. <i>The disposition of particles at fluid interfaces</i>	297
3. <i>Particle-assisted wetting</i>	299
4. <i>Pickering emulsions</i>	303
5. <i>Armored bubbles and liquid marbles</i>	305
6. <i>Janus particles and nanoparticles at fluid interfaces</i>	306
K. <i>The description of solid surfaces</i>	309
1. <i>Solid surface roughness</i>	309
2. <i>Fractal surfaces</i>	310
3. <i>Surface texture</i>	313
4. <i>Measurement of surface roughness and texture by stylus profilometry</i>	314
L. <i>Optical techniques for surface characterization</i>	315
1. <i>Optical microscopy</i>	315
2. <i>Optical profilometry</i>	318
3. <i>Confocal microscopy</i>	318
4. <i>Electron microscopy</i>	319
5. <i>Near-field scanning optical microscopy (NSOM)</i>	320
M. <i>Scanning probe microscopy (SPM)</i>	321
1. <i>Scanning Tunneling Microscopy (STM)</i>	322
2. <i>Atomic Force Microscopy (AFM)</i>	324
N. <i>Surface area of powders, pore size distribution</i>	331
O. <i>Energetic characterization of solid surfaces: Inverse Gas Chromatography (IGC)</i>	333
SOME FUN THINGS TO DO: CHAPTER 4	338
V. COLLOIDAL SYSTEMS: PHENOMENOLOGY AND CHARACTERIZATION	345
A. <i>Preliminaries</i>	345
1. <i>Definition and classification of colloids</i>	345
2. <i>General properties of colloidal dispersions</i>	346
3. <i>Dense vs. dilute dispersions</i>	349
B. <i>Mechanisms of lyophobic colloid instability</i>	351
1. <i>Phase segregation: the "phoretic processes"</i>	351
2. <i>Thermodynamic criteria for stability</i>	353
3. <i>Aggregation</i>	353
4. <i>Coalescence</i>	355
5. <i>Particle size disproportionation</i>	356

C. Preparation of colloid particles and colloidal dispersions	358
1. <i>Classification of preparation strategies for lyophobic colloids</i>	358
2. <i>Top-down strategies</i>	360
3. <i>Bottom-up strategies</i>	365
D. Morphology of colloids: particle size, size distribution, and particle shape	371
1. <i>Description of particle size distributions</i>	371
2. <i>Distributions based on different size variables and weighting factors</i>	375
3. <i>Normal (Gaussian) and log-normal distributions</i>	379
4. <i>Particle shape</i>	382
E. Sedimentation and centrifugation	387
1. <i>Individual particle settling: Stokes' law</i>	387
2. <i>Multi-particle, wall and charge effects on sedimentation</i>	389
3. <i>Differential sedimentation; particle size analysis</i>	391
4. <i>Centrifugation</i>	395
F. Brownian motion; sedimentation-diffusion equilibrium	397
1. <i>Kinetic theory and diffusion</i>	397
2. <i>Brownian motion</i>	399
3. <i>Sedimentation (centrifugation) – diffusion equilibrium</i>	403
4. <i>Practical retrospective regarding sedimentation and other phoretic processes</i>	407
G. Measurement of particle size and size distribution: overview	409
1. <i>Classification of methods</i>	409
2. <i>Microscopy</i>	410
H. Light scattering	413
1. <i>Classical (static) light scattering</i>	413
2. <i>Rayleigh scattering</i>	414
3. <i>Turbidity</i>	418
4. <i>Rayleigh-Gans-Debye (RGD) scattering</i>	421
5. <i>Mie scattering</i>	427
6. <i>Fraunhofer diffraction; laser diffraction</i>	429
7. <i>Inelastic scattering: absorbance; the Raman effect</i>	431
8. <i>Scattering from denser dispersions</i>	436
9. <i>Dynamic Light Scattering (Photon Correlation Spectroscopy)</i>	437
10. <i>Dynamic light scattering from denser dispersions</i>	442
I. Aperture, chromatographic and acoustic methods for particle sizing	444
1. <i>Aperture (one-at-a-time) methods</i>	444
2. <i>Chromatographic methods</i>	446
3. <i>Acoustic methods</i>	448
SOME FUN THINGS TO DO: CHAPTER 5	450

VI. ELECTRICAL PROPERTIES OF INTERFACES	455
A. Origin of charge separation at interfaces	455
1. <i>Overview</i>	455
2. <i>Preferential adsorption/desorption of lattice ions</i>	456
3. <i>Specific adsorption of charged species</i>	459
4. <i>Ionization of surface functional groups</i>	460
5. <i>Isomorphic substitution</i>	461
6. <i>Accumulation/depletion of electrons</i>	462
7. <i>Interface charging in non-aqueous systems</i>	463
B. Electric double layer formation and structure	466
1. <i>The Helmholtz model; electrostatic units</i>	466
2. <i>The Gouy-Chapman model; Poisson-Boltzmann equation</i>	467
3. <i>Boundary conditions to the Poisson-Boltzmann equation</i>	475
4. <i>Double layers at spherical and cylindrical surfaces</i>	477
5. <i>The free energy of double layer formation</i>	478
6. <i>The Stern model; structure of the inner part of the double layer</i>	480
7. <i>The mercury solution interface; electrocapillarity and refinements to the double layer model</i>	483
8. <i>Oriented dipoles at the interface: the χ-potential</i>	485
C. Electrostatic characterization of colloids by titration methods	487
1. <i>Colloid titrations</i>	487
2. <i>Potentiometric titrations</i>	488
3. <i>Conductometric titrations</i>	492
4. <i>Donnan equilibrium and the suspension effect</i>	493
D. Electrokinetics	496
1. <i>The electrokinetic phenomena</i>	496
2. <i>The zeta potential and its interpretation</i>	500
3. <i>Electrokinetic measurements; micro-electrophoresis</i>	503
4. <i>Relationship of zeta potential to electrophoretic mobility</i>	508
5. <i>Electrokinetic titrations</i>	512
6. <i>Electro-acoustic measurements</i>	514
E. Dielectrophoresis and optical trapping	516
1. <i>Dielectrophoresis</i>	516
2. <i>Electrorotation and traveling wave dielectrophoresis</i>	519
3. <i>Optical trapping; laser tweezers</i>	520
SOME FUN THINGS TO DO: CHAPTER 6	523
VII. INTERACTION BETWEEN COLLOID PARTICLES	525
A. Overview and rationale	525
B. Long-range van der Waals interactions	526
1. <i>The Hamaker (microscopic) approach</i>	526
2. <i>Retardation</i>	530
3. <i>The Lifshitz (macroscopic) approach</i>	532
4. <i>Measurement of Hamaker constants</i>	535
C. Electrostatic interactions; DLVO theory	540

1. <i>Electrostatic repulsion between charged flat plates</i>	540
2. <i>Electrostatic interactions between curved surfaces; the Derjaguin approximation</i>	544
3. <i>DLVO theory: electrostatic dispersions</i>	547
4. <i>Jar testing, the Schulze-Hardy rule and agreement with theory</i>	552
5. <i>The Hofmeister series; ion speciation and ionic specific adsorption</i>	554
6. <i>Repeptization</i>	556
7. <i>Interaction between dissimilar surfaces: hetero-aggregation</i>	558
D. <i>Kinetics of aggregation</i>	560
1. <i>Classification of aggregation rate processes and nomenclature</i>	560
2. <i>Smoluchowski theory of diffusion-limited aggregation</i>	561
3. <i>The hydrodynamic drainage effect</i>	566
4. <i>Orthokinetic (shear flow induced) aggregation</i>	568
5. <i>Reaction-limited (slow) aggregation; the stability ratio W</i>	569
6. <i>Secondary minimum effects</i>	571
7. <i>Kinetics of hetero-aggregation</i>	573
8. <i>Measurement of early-stage aggregation kinetics (W)</i>	574
9. <i>Surface aggregation</i>	577
10. <i>Electrostatic stabilization and aggregation rates in apolar media</i>	579
E. <i>Steric stabilization and other colloid-polymer interactions</i>	582
1. <i>Polymer adsorption and steric stabilization</i>	582
2. <i>Thermodynamic considerations: enthalpic vs. entropic effects</i>	585
3. <i>Fischer theory</i>	587
4. <i>Steric repulsion plotted on DLVO coordinates</i>	591
5. <i>Electro-steric stabilization</i>	595
6. <i>Bridging flocculation</i>	596
7. <i>Depletion flocculation</i>	597
8. <i>Electrophoretic displays; electronic paper</i>	599
F. <i>The kinetics (and thermodynamics) of flocculation</i>	601
G. <i>Other non-DLVO interaction forces</i>	603
H. <i>Aggregate structure evolution; fractal aggregates</i>	607
1. <i>Stages of the aggregation process</i>	607
2. <i>Fractal aggregates</i>	608
3. <i>The effect of particle size on aggregation phenomena; coating by nanoparticles</i>	612
SOME FUN THINGS TO DO: CHAPTER 7	613

VIII. RHEOLOGY OF DISPERSIONS	616
A. Rheology: scope and definitions	616
B. Viscometry	617
1. <i>Newton's law of viscosity</i>	617
2. <i>Measurement of viscosity</i>	618
C. The viscosity of colloidal dispersions	622
1. <i>Dilute dispersions; Einstein theory</i>	622
2. <i>Denser dispersions of non-interacting particles</i>	623
3. <i>Dilute dispersions of non-spherical particles</i>	625
D. Non-Newtonian rheology	626
1. <i>General viscous behavior of dispersions of non-interacting particulates</i>	626
2. <i>Fluids with a yield stress</i>	630
3. <i>Time-dependent rheology</i>	632
4. <i>Viscoelasticity</i>	633
E. Electroviscous effects	637
SOME FUN THINGS TO DO: CHAPTER 8	640
IX. EMULSIONS AND FOAMS	643
A. General consideration of emulsions	643
1. <i>Classification of emulsions</i>	643
2. <i>Emulsifiers and emulsion stability</i>	644
3. <i>Thermodynamics of emulsification/breakdown</i>	649
4. <i>Preparation of emulsions</i>	651
B. O/W or W/O emulsions?	652
1. <i>Rules of thumb</i>	652
2. <i>The hydrophile-lipophile balance (HLB) and related scales</i>	654
3. <i>Double (or multiple) emulsions</i>	659
C. Application of emulsions	661
1. <i>Formation/breaking in situ</i>	661
2. <i>Demulsification</i>	663
D. Microemulsions	664
1. <i>Distinction between microemulsions and macro emulsions</i>	664
2. <i>Phase behavior of microemulsion systems</i>	666
3. <i>Ultra-low interfacial tension</i>	671
4. <i>Interfacial film properties in microemulsion systems</i>	672
E. General consideration of foams	673
1. <i>Nature and preparation of foams</i>	673
2. <i>Stages in foam lifetime</i>	675
3. <i>Stability mechanisms</i>	676
4. <i>Foam behavior and foaming agents</i>	681
5. <i>Antifoam action</i>	684
6. <i>Froth flotation</i>	686

7. <i>Foaming in non-aqueous media; general surface activity near a phase split</i>	687
SOME FUN THINGS TO DO: CHAPTER 9	691
X. INTERFACIAL HYDRODYNAMICS	695
A. Unbalanced forces at fluid interfaces	695
1. <i>Unbalanced normal forces</i>	695
2. <i>Tangential force imbalances: the Marangoni effect</i>	696
3. <i>Boundary conditions at a fluid interface</i>	702
B. Examples of Interfacial Hydrodynamic Flows	705
1. <i>The breakup of capillary jets</i>	705
2. <i>Steady thermocapillary flow</i>	712
3. <i>The motion of bubbles or drops in a temperature gradient</i>	714
4. <i>Marangoni instability in a shallow liquid pool—Bénard cells</i>	718
C. Some Practical Implications of the Marangoni Effect	728
1. <i>Marangoni effects on mass transfer</i>	728
2. <i>Marangoni drying</i>	732
3. <i>Marangoni patterning</i>	733
D. The Effect of Surface Active Agents	735
1. <i>Gibbs elasticity</i>	735
2. <i>The boundary conditions describing the effects of surfactants</i>	737
3. <i>The effect of surfactants on bubble or droplet circulation</i>	740
4. <i>The effect of surfactants on the stability of a pool heated from below</i>	745
SOME FUN THINGS TO DO: CHAPTER 10	748
Appendix 1: EXERCISES	753
Appendix 2: THE TOP TEN	767
Appendix 3: OTHER SOURCES	771
Index	773
