2

OBJECTIVES – 3/26

- **Syllabus, Course Introduction**
- C Review Survey
- Background Survey & VM Survey

- **Chapter 2: Operating Systems – Three Easy Pieces**
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 26, 2024

TCSS422: Operating Systems [Spring 2024]

L1.3

3

TCSS 422 – Spring 2024

- **Spring 2024:**
 - *In-person course*
 - Sessions of this course may be hosted online as needed due to instructor's schedule:
April 18 (fully online or asynchronous)
 - Hybrid/Synchronous Format – streamed LIVE via Zoom and recorded for 24/7 availability
 - Demographics survey will poll class regarding class format for Spring 2024
 - Based on survey, format adjustments may be made
 - In-class activities can be submitted asynchronously, online if necessary
- 20 class meetings
 - 1 Monday holiday in Spring 2024: May 27
- Midterm ~ Thursday May 2nd
- Final exam ~ Thursday June 6th

TCSS 422

8

TCS422 COURSE WORK

- **Assignments (45%)**
 - 4 Assignments: roughly every two weeks
 - Submit ALL programming assignments via Canvas
 - Please do not email submissions – they are prone to be lost
 - If Canvas has closed, please request it be reopened...
- **Tutorials/Quizzes/In-class activities (15%)**
 - ~ 6 - 9 total items
 - Drop lowest two
 - Variety of formats: collaborative in class (*via Zoom breakout rooms*), online, reading, tutorial
- **Exams: Midterm and Final (40%)**
 - In class on Thursday May 2 and Thursday June 6 (**tentative*)
 - Final exam is comprehensive, with emphasis on new material

----------------	---	-------

10

TCSS 422: PROGRAMS

- *Tentative - subject to change*
- **Assignment 0:**
Introduction to Linux, Ubuntu Virtual Machine
- **Assignment 1:**
Programming with multiple processes (in C)
- **Assignment 2:**
Multithreaded programming and concurrency (C or Java)
- **Assignment 3:**
Kernel (real) mode programming (in C)

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.11
----------------	---	-------

11

TCSS 422: PROGRAM DUE DATES

- **Programs - please start early**
 - Work as if deadline is several days earlier
 - Allows for a “buffer” for running into unexpected problems
 - Underestimation of the task at hand
 - Allows time to seek C help from CSS lab mentors
 - If less familiar with C/pointers (TCSS 333/380),
BUDGET MORE TIME

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.12
----------------	---	-------

12

UBUNTU 22.04 – VIRTUAL MACHINE

- **Ubuntu 22.04**
 - Open source version of Debian-package based Linux
 - Package management: “apt get” repositories
 - See: <https://packages.ubuntu.com/>

- **Ubuntu Advantages**
 - Enterprise Linux Distribution
 - Free, widely used by developers
 - Long term releases (LTS) every 2 years, good for servers
 - 6-month feature releases, good for sharing new features with the community

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.13
----------------	---	-------

13

UBUNTU 22.04 – VM INSTALLATION

- Introduction to Oracle VirtualBox for creating Virtual Machines: <https://youtu.be/VZJ6KZUc25M>
- Installing Ubuntu 22.04 on Windows 10 Oracle VirtualBox: <https://youtu.be/zHwFtyxJsog>
- And here are written instructions for installing Ubuntu 22.04 on Oracle VirtualBox for Windows: Instructions for installing Ubuntu 22.04 on Windows VirtualBox: <https://trendoceans.com/install-ubuntu-on-virtualbox/>
- And here is a video for installing Ubuntu 22.04 on M1 Mac with Parallels*: <https://youtu.be/1vht7h3EQtc>
- * - note for Mac users, Parallels is recommended (required?) for virtual machines over Oracle Virtual Box. There is a student edition: <https://www.parallels.com/landingpage/pd/education/>

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.14
----------------	---	-------

14

C PROGRAMING IN TCSS 422

- Many OSES are coded primarily in C and Assembly Language
- C is a particularly useful language for working with hardware / hardware drivers and operating systems
- C allows writing programs that can directly access the computer's physical memory (in kernel/real mode) providing nearly the power and speed of assembly language
 - *But in a much easier to write high-level language*
- Ideally, all university operating system courses are taught in C/C++. Our textbook is in C/C++
 - *This quarter we will offer the option of assignment of completing assignment 2 in Java (multithreaded programming)*

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.15
----------------	---	-------

15

C MENTORING

- <https://www.tacoma.uw.edu/set/students/mentors>
- School of Engineering and Technology Mentors
- Office hours in person and Zoom
- Varied hours and availability based on mentors schedules
- Monday – Thursday: ~ 10:30 am – 9:00 pm
- Friday: ~ 10:30 - 12:30 pm
- Spring quarter hours will be posted once available

- Student mentors managed by SET's Monika Sobolewska

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.16
----------------	---	-------

16

INSTRUCTOR HELP

- **Office hours: TBD, after class**
 - CP 229 and Zoom
 - Additional hours based on survey results
 - Also available by appointment

- Take **ownership** of your educational outcome
 - ~10 weeks in TCSS 422 is very small relative to entire IT career
 - Make the most of this **limited** opportunity
 - Maximize your educational investment
 - ***** Ask questions in class *****
 - Also questions after class, email, Canvas discussion boards
 - Seek help using UWT resources, the Internet, YouTube videos (video.google.com) and online tutorials

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.17
----------------	---	-------

17

CLASS PARTICIPATION

- **Questions and discussion are strongly encouraged**
 - Leverage your educational investment
 - All questions are encouraged!
 - This instructor appreciates questions at all levels
 - there is no judgement for any question

- **Daily feedback surveys**
 - How much is new vs. review?
 - Checking the pace...
 - What is unclear? It's helpful to know when topics are not clear
 - Use the survey to write questions and feedback that come to you during the lecture

- **Poll-EV**

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.18
----------------	---	-------

18

OBJECTIVES – 3/26

- Syllabus, Course Introduction
- **C Review Survey**
- Background Survey & VM Survey

- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.19
----------------	---	-------

19

C REVIEW SURVEY

QUIZ 0 – IN CANVAS

----------------	---	-------

27

INTRODUCTION TO OPERATING SYSTEMS

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.28
----------------	---	-------

28

OBJECTIVES

- **Chapter 2: Operating Systems – Three Easy Pieces**
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - **THREE EASY PIECES:**
 - Virtualizing the CPU
 - Virtualizing Memory
 - Virtualizing I/O
 - Operating system design goals

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.29
----------------	---	-------

29

OPERATING SYSTEMS

- Responsible for:
 - Making it easy to **run** programs
 - Allowing programs to **share** memory
 - Enabling programs to **interact** with devices

OS is in charge of making sure the system operates correctly and efficiently.

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.30
----------------	---	-------

30

OBJECTIVES – 3/26

- Syllabus, Course Introduction
- C Review Survey
- Background Survey & VM Survey

- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - **Management of resources**
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.31
----------------	---	-------

31

RESOURCE MANAGEMENT

- The OS is a resource manager
- Manages CPU, disk, network I/O
- Enables many programs to
 - **Share the CPU**
 - **Share the underlying physical memory (RAM)**
 - **Share physical devices**
 - Disks
 - Network Devices
 - ...

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.32
----------------	---	-------

32

OBJECTIVES – 3/26

- Syllabus, Course Introduction
- C Review Survey
- Background Survey & VM Survey

- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - **Concepts of virtualization/abstraction**
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.33
----------------	---	-------

33

VIRTUALIZATION

- Operating systems present **physical resources** as **virtual representations** to the programs sharing them
 - Physical resources: CPU, disk, memory, ...
 - The virtual form is “**abstract**”
 - The OS presents an illusion that each user program runs in isolation on its own hardware
 - This virtual form is general, powerful, and easy-to-use

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.34
----------------	---	-------

34

ABSTRACTIONS

- What form of abstraction does the OS provide?
 - CPU
 - Process and/or thread
 - Memory
 - Address space
 - → large array of bytes
 - All programs see the same “size” of RAM
 - Disk
 - Files

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.35
----------------	---	-------

35

WHY ABSTRACTION?

- Allow applications to reuse common facilities
- Make different devices look the same
 - Easier to write common code to use devices
 - Linux/Unix Block Devices
- Provide higher level abstractions
- More useful functionality

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.36
----------------	---	-------

36

ABSTRACTION CHALLENGES

- What level of abstraction?
 - How much of the underlying hardware should be exposed?
 - What if **too much**?
 - What if **too little**?
- What are the correct abstractions?
 - Security concerns

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.37
----------------	---	-------

37

OBJECTIVES – 3/26

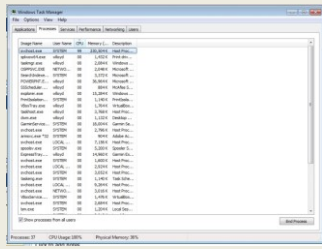

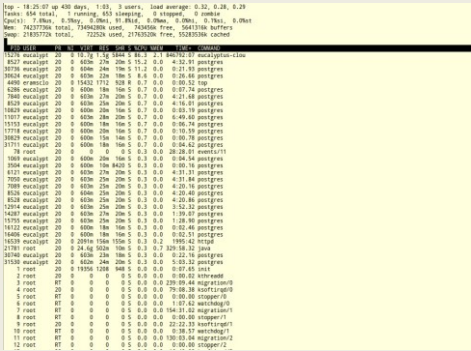

- Syllabus, Course Introduction
- C Review Survey
- Background Survey & VM Survey
- Chapter 2: Operating Systems – Three Easy Pieces
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - Three Easy Pieces: CPU, Memory, I/O
 - Concurrency
 - Operating system design goals

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.38
----------------	---	-------

38

VIRTUALIZING THE CPU

- Each running program gets its own “virtual” representation of the CPU
- Many programs seem to run at once
- Linux: “top” command shows process list
- Windows: task manager

March 26, 2024
TCSS422: Operating Systems [Spring 2024]
School of Engineering and Technology, University of Washington - Tacoma
L1.39

39

VIRTUALIZING THE CPU - 2

- Simple Looping C Program (simpleloop.c)

```

1  #include <stdio.h>
2  #include <stdlib.h>
3  #include <sys/time.h>
4  #include <assert.h>
5  #include "common.h"
6
7  int
8  main(int argc, char *argv[])
9  {
10     if (argc != 2) {
11         fprintf(stderr, "usage: cpu <string>\n");
12         exit(1);
13     }
14     char *str = argv[1];
15     while (1) {
16         Spin(1); // Repeatedly checks the time and
17                 // returns once it has run for a second
18         printf("%s\n", str);
19     }
20     return 0;
    
```

March 26, 2024
TCSS422: Operating Systems [Spring 2024]
School of Engineering and Technology, University of Washington - Tacoma
L1.40

40

VIRTUALIZING THE CPU - 3

```
prompt> gcc -o cpu cpu.c -Wall
prompt> ./cpu "A"
A
A
A
^C
prompt>
```

- **simpleloop.c**
- **Runs forever, must Ctrl-C to halt...**

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.41
----------------	---	-------

41

VIRTUALIZATION THE CPU - 4

```
prompt> ./cpu A & ; ./cpu B & ; ./cpu C & ; ./cpu D &
[1] 7353
[2] 7354
[3] 7355
[4] 7356
A
B
D
C
A
B
D
C
A
C
B
D
...
```

Even though we have only one processor, all four instances of our program seem to be running at the same time!

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.42
----------------	---	-------

42

<h2 style="text-align: center;">OBJECTIVES – 3/26</h2>

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.44

44

VIRTUALIZING MEMORY - 2

■ Program to read/write memory: (**mem.c**) (from ch. 2 pgs. 5-6)

```
1  #include <unistd.h>
2  #include <stdio.h>
3  #include <stdlib.h>
4  #include "common.h"
5
6  int
7  main(int argc, char *argv[])
8  {
9      int *p = malloc(sizeof(int)); // a1: allocate some
                                   //          memory
10     assert(p != NULL);
11     printf("(%)d address of p: %08x\n",
12           getpid(), (unsigned) p); // a2: print out the
                                   //          address of the memmory
13     *p = 0; // a3: put zero into the first slot of the memory
14     while (1) {
15         Spin(1);
16         *p = *p + 1;
17         printf("(%)d p: %d\n", getpid(), *p); // a4
18     }
19     return 0;
20 }
```

March 26, 2024

TCSS422: Operating Systems [Spring 2024]
School of Engineering and Technology, University of Washington - Tacoma

L1.45

45

VIRTUALIZING MEMORY - 3

■ Output of **mem.c** (example from ch. 2 pgs. 5-6)

```
prompt> ./mem
(2134) memory address of p: 00200000
(2134) p: 1
(2134) p: 2
(2134) p: 3
(2134) p: 4
(2134) p: 5
^C
```

- int value stored at virtual address 00200000
- program increments int value pointed to by p

March 26, 2024

TCSS422: Operating Systems [Spring 2024]
School of Engineering and Technology, University of Washington - Tacoma

L1.46

46

VIRTUALIZING MEMORY - 4

- Multiple instances of **mem.c**

This example no longer works as advertised !
Ubuntu has been updated.
The ptr location is no longer identical. This was considered a security issue.

```
prompt> ./mem & ./mem &
[1] 24113
[2] 24114
(24113) memory address of p: 00200000
(24114) memory address of p: 00200000
(24113) p: 1
(24114) p: 1
(24114) p: 2
(24113) p: 2
(24113) p: 3
(24114) p: 3
...
```

- IN THE BOOK: `(int*)p` appears to have the same memory location **00200000**
- Why does modifying the value of `*p` in program #1 (PID 24113), not interfere with the value of `*p` in program #2 (PID 24114) ?
 - The OS has “virtualized” memory, and provides a “virtual” address

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.47
----------------	---	-------

47

VIRTUAL MEMORY

- Key take-aways:
- Each process (program) has its own **virtual address space**
- The OS maps virtual **address spaces** onto **physical memory**
- A memory reference from one process can not affect the address space of others.
 - **Isolation**
- Physical memory, a shared resource, is managed by the OS

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.48
----------------	---	-------

48

OBJECTIVES – 3/26

- Syllabus, Course Introduction
- C Review Survey
- Background Survey & VM Survey

- **Chapter 2: Operating Systems – Three Easy Pieces**
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - **Three Easy Pieces: CPU, Memory, I/O**
 - Concurrency
 - Operating system design goals

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L1.49
----------------	---	-------

49

PERSISTENCE

- **DRAM: Dynamic Random Access Memory: DIMMs/SIMMs**
 - Stores data while power is present
 - When power is lost, data is lost (*volatile*)

- **Operating System helps “persist” data more permanently**
 - I/O device(s): hard disk drive (HDD), solid state drive (SSD)
 - File system(s): “catalog” data for storage and retrieval

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L2.50
----------------	---	-------

50

PERSISTENCE - 2

```
1  #include <stdio.h>
2  #include <unistd.h>
3  #include <assert.h>
4  #include <fcntl.h>
5  #include <sys/types.h>
6
7  int
8  main(int argc, char *argv[])
9  {
10     int fd = open("/tmp/file", O_WRONLY | O_CREAT
11                  | O_TRUNC, S_IRWXU);
12     assert(fd > -1);
13     int rc = write(fd, "hello world\n", 13);
14     assert(rc == 13);
15     close(fd);
16     return 0;
}
```

- `open()`, `write()`, `close()`: OS **system calls** for device I/O
- Note: man page for `open()`, `write()` requires page number: "man 2 `open`", "man 2 `write`", "man `close`"

School of Engineering and Technology, University of Washington - Tacoma

L2.51

51

PERSISTENCE - 3

- To write to disk, OS must:
 - Determine where on disk data should reside
 - Perform sys calls to perform I/O:
 - Read/write to file system (*inode record*)
 - Read/write data to file
- OS provides fault tolerance for system crashes
 - Journaling: Record disk operations in a journal for replay
 - Copy-on-write: replicate shared data across multiple disks - see *ZFS filesystem*
 - Carefully order writes on disk (*especially spindle drives*)

PTHREAD_CREATE(3)
Linux Programmer's Manual
PTHREAD_CREATE(3)

NAME top

pthread_create - create a new thread

SYNOPSIS top

```
#include <pthread.h>

int pthread_create(pthread_t *thread, const pthread_attr_t *attr,
void *(*start_routine) (void *), void *arg);

Compile and link with -pthread.
```

DESCRIPTION top

The `pthread_create()` function starts a new thread in the calling process. The new thread starts execution by invoking `start_routine()`; `arg` is passed as the sole argument of `start_routine()`.

The new thread terminates in one of the following ways:

- * It calls `pthread_exit(3)`, specifying an exit status value that is available to another thread in the same process that calls `pthread_join(3)`.
- * It returns from `start_routine()`. This is equivalent to calling `pthread_exit(3)` with the value supplied in the `return` statement.
- * It is canceled (see `pthread_cancel(3)`).
- * Any of the threads in the process calls `exit(3)`, or the main thread performs a return from `main()`. This causes the termination of all threads in the process.

The `attr` argument points to a `pthread_attr_t` structure whose contents are used at thread creation time to determine attributes for the new thread; this structure is initialized using `pthread_attr_init(3)` and related functions. If `attr` is NULL, then the thread is created with default attributes.

58

CONCURRENCY - 4

- Command line parameter `argv[1]` provides loop length
- Defines number of times the shared counter is incremented
- Loops: 1000

```
prompt> gcc -o pthread pthread.c -Wall -pthread
prompt> ./pthread 1000
Initial value : 0
Final value : 2000
```

- Loops 100000

```
prompt> ./pthread 100000
Initial value : 0
Final value : 143012 // huh??
prompt> ./pthread 100000
Initial value : 0
Final value : 137298 // what ???
```

59

CONCURRENCY - 5

- When loop value is large why do we not achieve 200,000 ?
- C code is translated to (3) assembly code operations
 1. Load counter variable into register
 2. Increment it
 3. Store the register value back in memory
- These instructions happen concurrently and VERY FAST
- (P1 || P2) write incremented register values back to memory, While (P1 || P2) read same memory
- Memory access here is **unsynchronized (non-atomic)**
- *Some of the increments are lost*

60

61

PARALLEL PROGRAMMING

- To perform parallel work, a single process may:
- A. Launch multiple threads to execute code in parallel while sharing global data in memory
- B. Launch multiple processes to execute code in parallel without sharing global data in memory
- C. Both A and B
- D. None of the above

63

SUMMARY: OPERATING SYSTEM DESIGN GOALS

- **ABSTRACTING THE HARDWARE**
 - Makes programming code easier to write
 - Automate sharing resources – save programmer burden

- **PROVIDE HIGH PERFORMANCE**
 - Minimize overhead from OS abstraction (Virtualization of CPU, RAM, I/O)
 - Share resources fairly
 - Attempt to tradeoff performance vs. fairness → consider priority

- **PROVIDE ISOLATION**
 - User programs can't interfere with each other's virtual machines, the underlying OS, or the sharing of resources

March 26, 2024	TCSS422: Operating Systems [Spring 2024] School of Engineering and Technology, University of Washington - Tacoma	L2.64
----------------	---	-------

64

SUMMARY: OPERATING SYSTEM DESIGN GOALS - 2

- **RELIABILITY**
 - OS must not crash, 24/7 Up-time
 - Poor user programs must not bring down the system:

Blue Screen

- Other Issues:
 - Energy-efficiency
 - Security (of data)
 - Cloud: Virtual Machines
