## OBJECTIVES – 4/1

- **Syllabus, Course Introduction**
  
- C Review Survey
- Background Survey & VM Survey
  
- **Chapter 2: Operating Systems – Three Easy Pieces**
  - Introduction to operating systems
  - Management of resources
  - Concepts of virtualization/abstraction
  - Three Easy Pieces: CPU, Memory, I/O
  - Concurrency
  - Operating system design goals

April 1, 2025

TCSS422: Operating Systems [Spring 2025]  
School of Engineering and Technology, University of Washington - Tacoma

L1.3

### TCSS 422 – Spring 2025

- **Spring 2025:**
  - *In-person course*
    - Sessions of this course may be hosted online as needed due to instructor's schedule:  
Dates will be announced as soon as possible
  - Hybrid/Synchronous Format – streamed LIVE via Zoom and recorded for 24/7 availability
  - Demographics survey will poll class regarding class format for Spring 2025
    - Based on survey, adjustments may be made
    - In-class activities can be submitted asynchronously, online if necessary
- 20 class meetings
  - 1 Monday holiday in Spring 2025: May 26
- Quizzes: Thursday April 24<sup>th</sup>, May 29<sup>th</sup> @ 4:40p
- Midterm: Thursday May 8<sup>th</sup>
- Final exam ~ Thursday June 12<sup>th</sup>

TCSS 422

## TEXT BOOK – HARD COVER

- **Hardcover edition (version 1.1) from lulu.com:**
- <https://www.lulu.com/shop/andrea-arpaci-dusseau-and-remzi-arpaci-dusseau/operating-systems-three-easy-pieces-hardcover-version-110/hardcover/product-15gjeeky.html?q=three+easy+pieces+softcover&page=1&page+Size=4>
- With coupon textbook is only \$39.75 + tax & shipping
- Sometimes there are 10% and 15% off lulu.com coupons

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.5
---------------	---	------

5

## TEXT BOOK – SOFT COVER

- **Softcover edition (version 1.?) from amazon.com:**
- <https://www.amazon.com/gp/product/198508659X/>
- only \$26.86 + tax & shipping

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.6
---------------	---	------

8

## TCS422 COURSE WORK

- **Assignments (25%)**
  - 3-4 Assignments: roughly every two weeks
  - Submit ALL programming assignments via Canvas
    - Please do not email submissions – they are prone to be lost
    - If Canvas has closed, please request it be reopened...
- **Tutorials/Activities (15%)**
  - ~ 6 - 9 total items
  - Drop lowest
  - Variety of formats: collaborative in class (*via Zoom breakout rooms*), online, reading, tutorial

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.9
---------------	---	------

9

## TCS422 COURSE WORK - 2

- **Quizzes (20%)**
  - In BHS 106
  - Thursday April 24
  - Thursday May 29
  - Open book, open note, 1-hour (4:40 – 5:40p)
  - Serves as practice for midterm and final
- **Exams: Midterm and Final (20% each)**
  - In BHS 106
  - Thursday May 8 and Thursday June 12
  - 2-pages of notes double-sided
  - Final exam is comprehensive, with emphasis on new material

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.10
---------------	---	-------

10

## TCSS 422 – GENERATIVE AI

- Assignments will include **Generative AI Statement**
- Statement declares what use (if any) is permitted for each assignment
- If not noted otherwise, the use of **Generative AI** is strictly prohibited on assignments, and suspected use of **Generative AI** may result in a **ZERO** grade.

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.11
---------------	---	-------

11

## TCSS 422: PROGRAM DUE DATES

- Programs - please start early:

**Less than 50% chance of A/B**

### When do students start working?

Days before due date	A/B Grades (%)	C/D/F Grades (%)
>8	10	5
8	5	2
7	5	2
6	5	2
5	10	5
4	10	5
3	15	10
2	15	10
1	25	15
0 (Due Date)	35	25
-1	10	10
-2	5	5
<-2	5	5

From Virginia Tech Department of Computer Science

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.12
---------------	---	-------

12

## TCSS 422: PROGRAMS

- *Tentative - subject to change*
- **Assignment 0:**  
Introduction to Linux, Ubuntu Virtual Machine
- **Assignment 1:**  
Programming with multiple processes (in C)
- **Assignment 2:**  
Multithreaded programming and concurrency (C or Java)
- **Assignment 3:**  
Kernel (real) mode programming (in C)

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.13
---------------	---	-------

13

## TCSS 422: PROGRAM DUE DATES

- **Programs - please start early**
  - Work as if deadline is several days earlier
  - Allows for a “buffer” for running into unexpected problems
    - Underestimation of the task at hand
    - Allows time to seek C help from CSS lab mentors
    - If less familiar with C/pointers (TCSS 333/380),  
***BUDGET MORE TIME***

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.14
---------------	---	-------

14

## UBUNTU 24.04 – VIRTUAL MACHINE

- **Ubuntu 24.04**
  - Open source version of Debian-package based Linux
  - Package management: “apt get” repositories
    - See: <https://packages.ubuntu.com/>
- **Ubuntu Advantages**
  - Enterprise Linux Distribution
  - Free, widely used by developers
  - Long term releases (LTS) every 2 years, good for servers
  - 6-month feature releases, good for sharing new features with the community

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.15
---------------	---	-------

15

## UBUNTU 24.04 – VM INSTALLATION

- Introduction to Oracle VirtualBox for creating Virtual Machines:  
<https://youtu.be/VZJ6KZUc25M>
- Installing Ubuntu 24.04 on Windows 11 Oracle VirtualBox:
  - <https://youtu.be/DhVjgl57Ino>
  - <https://youtu.be/8uYjoBh21IU>
- Written instructions for installing Ubuntu 24.04 on Oracle VirtualBox: <https://itslinuxguide.com/install-ubuntu-virtualbox/>
- And here is a video for installing Ubuntu 24.04 on M1 Mac with UTM\*: <https://youtu.be/JrNS3brSnmA>
- \* - note for Mac users, UTM or Parallels is recommended for virtual machines over Oracle Virtual Box.
- UTM: <https://mac.getutm.app/>
- Parallels student edition:  
<https://www.parallels.com/landingpage/pd/education/>

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.16
---------------	---	-------

16

## C PROGRAMING IN TCSS 422

- Many OSES are coded primarily in C and Assembly Language
- C is a particularly useful language for working with hardware / hardware drivers and operating systems
- C allows writing programs that can directly access the computer's physical memory (in kernel/real mode) providing nearly the power and speed of assembly language
  - *But in a much easier to write high-level language*
- Ideally, all university operating system courses are taught in C/C++. Our textbook is in C/C++
  - *This quarter we will offer the option of assignment of completing assignment 2 in Java (multithreaded programming)*

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.17
---------------	---	-------

17

## C MENTORING

- <https://www.tacoma.uw.edu/set/students/mentors>
- School of Engineering and Technology Mentors
- Do not advertise help for 422 directly, but they do help with C in 380
- Office hours in person and Zoom
- Varied hours and availability based on mentors schedules
- Monday - Thursday: ~ noon - 8:00 pm
- Friday: ~ noon - 2:30 pm
- Spring quarter hours are posted now
- Student mentors managed by SET's Monika Sobolewska

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.18
---------------	---	-------

18

## INSTRUCTOR HELP

- **Office hours: TBD, after class**
  - CP 229 and Zoom
  - Additional hours based on survey results
  - Also available by appointment
  
- Take **ownership** of your educational outcome
  - ~10 weeks in TCSS 422 is very small relative to entire IT career
  - Make the most of this **limited** opportunity
    - Maximize your educational investment
  - **\*\*\* Ask questions in class \*\*\***
  - Also questions after class, email, Canvas discussion boards
  - Seek help using UWT resources, the Internet, YouTube videos (video.google.com) and online tutorials

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.19
---------------	---	-------

19

## CLASS PARTICIPATION

- **Questions and discussion are strongly encouraged**
  - Leverage your educational investment
  - All questions are encouraged!
  - This instructor appreciates questions at all levels
    - there is no judgement for any question
  
- **Feedback surveys**
  - How much is new vs. review?
  - Checking the pace...
  - What is unclear? It's helpful to know when topics are not clear
  - Use the survey to write questions and feedback that come to you during the lecture
  - Up to 2% Extra Credit for participating in surveys
  
- **Poll-EV**

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.20
---------------	---	-------

20

## OBJECTIVES – 4/1

- Syllabus, Course Introduction
- **C Review Survey**
- Background Survey & VM Survey
  
- Chapter 2: Operating Systems – Three Easy Pieces
  - Introduction to operating systems
  - Management of resources
  - Concepts of virtualization/abstraction
  - Three Easy Pieces: CPU, Memory, I/O
  - Concurrency
  - Operating system design goals

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.21
---------------	---	-------

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.31

31

OPERATING SYSTEMS		
<ul style="list-style-type: none"><li>■ Responsible for:<ul style="list-style-type: none"><li>■ Making it easy to <b>run</b> programs</li><li>■ Allowing programs to <b>share</b> memory</li><li>■ Enabling programs to <b>interact</b> with devices</li></ul></li></ul>		
<p><b>OS is in charge of making sure the system operates correctly and efficiently.</b></p>		
April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.32

32

## OBJECTIVES – 4/1

- Syllabus, Course Introduction
- C Review Survey
- Background Survey & VM Survey
  
- Chapter 2: Operating Systems – Three Easy Pieces
  - Introduction to operating systems
  - **Management of resources**
  - Concepts of virtualization/abstraction
  - Three Easy Pieces: CPU, Memory, I/O
  - Concurrency
  - Operating system design goals

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.33
---------------	---	-------

33

## RESOURCE MANAGEMENT

- The OS is a resource manager
- Manages CPU, disk, network I/O
- Enables many programs to
  - **Share the CPU**
  - **Share the underlying physical memory (RAM)**
  - **Share physical devices**
    - Disks
    - Network Devices
    - ...

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.34
---------------	---	-------

34

## OBJECTIVES – 4/1

- Syllabus, Course Introduction
- C Review Survey
- Background Survey & VM Survey
  
- Chapter 2: Operating Systems – Three Easy Pieces
  - Introduction to operating systems
  - Management of resources
  - **Concepts of virtualization/abstraction**
  - Three Easy Pieces: CPU, Memory, I/O
  - Concurrency
  - Operating system design goals

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.35
---------------	---	-------

35

## VIRTUALIZATION

- Operating systems present **physical resources** as **virtual representations** to the programs sharing them
  - Physical resources: CPU, disk, memory, ...
  - The virtual form is “**abstract**”
  - The OS presents an illusion that each user program runs in isolation on its own hardware
  - This virtual form is general, powerful, and easy-to-use

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.36
---------------	---	-------

36

## ABSTRACTIONS

- What form of abstraction does the OS provide?
  - CPU
    - Process and/or thread
  - Memory
    - Address space
    - → large array of bytes
    - All programs see the same “size” of RAM
  - Disk
    - Files

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.37
---------------	---	-------

37

## WHY ABSTRACTION?

- Allow applications to reuse common facilities
- Make different devices look the same
  - Easier to write common code to use devices
    - Linux/Unix Block Devices
- Provide higher level abstractions
- More useful functionality

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.38
---------------	---	-------

38

## ABSTRACTION CHALLENGES

- What level of abstraction?
  - How much of the underlying hardware should be exposed?
    - What if **too much**?
    - What if **too little**?
- What are the correct abstractions?
  - Security concerns

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.39
---------------	---	-------

39

## OBJECTIVES – 4/1

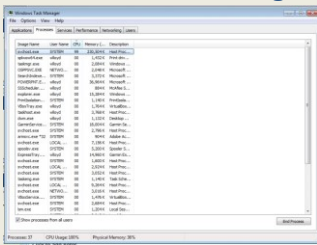

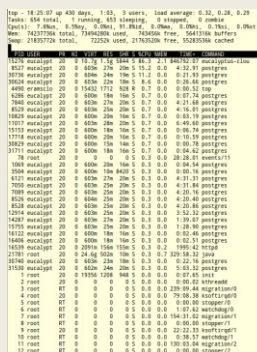

- Syllabus, Course Introduction
- C Review Survey
- Background Survey & VM Survey
- Chapter 2: Operating Systems – Three Easy Pieces
  - Introduction to operating systems
  - Management of resources
  - Concepts of virtualization/abstraction
  - Three Easy Pieces: **CPU**, Memory, I/O
  - Concurrency
  - Operating system design goals

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.40
---------------	---	-------

40

## VIRTUALIZING THE CPU

- Each running program gets its own “virtual” representation of the CPU
- Many programs seem to run at once
- Linux: “top” command shows process list
- Windows: task manager

April 1, 2025
TCSS422: Operating Systems [Spring 2025]  
 School of Engineering and Technology, University of Washington - Tacoma
L1.41

41

## VIRTUALIZING THE CPU - 2

- Simple Looping C Program (simpleloop.c)

```

1  #include <stdio.h>
2  #include <stdlib.h>
3  #include <sys/time.h>
4  #include <assert.h>
5  #include "common.h"
6
7  int
8  main(int argc, char *argv[])
9  {
10     if (argc != 2) {
11         fprintf(stderr, "usage: cpu <string>\n");
12         exit(1);
13     }
14     char *str = argv[1];
15     while (1) {
16         Spin(1); // Repeatedly checks the time and
17                 // returns once it has run for a second
18         printf("%s\n", str);
19     }
20     return 0;
    
```

April 1, 2025
TCSS422: Operating Systems [Spring 2025]  
 School of Engineering and Technology, University of Washington - Tacoma
L1.42

42

## VIRTUALIZING THE CPU - 3

```
prompt> gcc -o cpu cpu.c -Wall  
prompt> ./cpu "A"  
A  
A  
A  
^C  
prompt>
```

- **simpleloop.c**
- **Runs forever, must Ctrl-C to halt...**

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.43
---------------	---	-------

43

## VIRTUALIZATION THE CPU - 4

```
prompt> ./cpu A & ; ./cpu B & ; ./cpu C & ; ./cpu D &  
[1] 7353  
[2] 7354  
[3] 7355  
[4] 7356  
A  
B  
D  
C  
A  
B  
D  
C  
A  
C  
B  
D  
...
```

**Even though we have only one processor, all four instances of our program seem to be running at the same time!**

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.44

46

## VIRTUALIZING MEMORY - 2

### ■ Program to read/write memory: (**mem.c**) (from ch. 2 pgs. 5-6)

```
1  #include <unistd.h>
2  #include <stdio.h>
3  #include <stdlib.h>
4  #include "common.h"
5
6  int
7  main(int argc, char *argv[])
8  {
9      int *p = malloc(sizeof(int)); // a1: allocate some
                                // memory
10     assert(p != NULL);
11     printf("(%d) address of p: %08x\n",
12           getpid(), (unsigned) p); // a2: print out the
                                // address of the memmory
13     *p = 0; // a3: put zero into the first slot of the memory
14     while (1) {
15         Spin(1);
16         *p = *p + 1;
17         printf("(%d) p: %d\n", getpid(), *p); // a4
18     }
19     return 0;
20 }
```

## VIRTUALIZING MEMORY - 3

### ■ Output of **mem.c** (example from ch. 2 pgs. 5-6)

```
prompt> ./mem
(2134) memory address of p: 00200000
(2134) p: 1
(2134) p: 2
(2134) p: 3
(2134) p: 4
(2134) p: 5
^C
```

- int value stored at virtual address 00200000
- program increments int value pointed to by p

L1.48

48

## VIRTUALIZING MEMORY - 4

- Multiple instances of **mem.c**

```
prompt> ./mem & ./mem &
[1] 24113
[2] 24114
(24113) memory address of p: 00200000
(24114) memory address of p: 00200000
(24113) p: 1
(24114) p: 1
(24114) p: 2
(24113) p: 2
(24113) p: 3
(24114) p: 3
...
```

**This example no longer works as advertised !**

**Ubuntu has been updated.**

**The ptr location is no longer identical. This was considered a security issue.**

- IN THE BOOK: `(int*)p` appears to have the same memory location **00200000**
- Why does modifying the value of `*p` in program #1 (PID 24113), not interfere with the value of `*p` in program #2 (PID 24114) ?
  - The OS has “virtualized” memory, and provides a “virtual” address

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.49
---------------	---	-------

49

## VIRTUAL MEMORY

- Key take-aways:
- Each process (program) has its own **virtual address space**
- The OS maps virtual **address spaces** onto **physical memory**
- A memory reference from one process can not affect the address space of others.
  - **Isolation**
- Physical memory, a shared resource, is managed by the OS

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.50
---------------	---	-------

50

## OBJECTIVES – 4/1

- Syllabus, Course Introduction
- C Review Survey
- Background Survey & VM Survey
  
- Chapter 2: Operating Systems – Three Easy Pieces
  - Introduction to operating systems
  - Management of resources
  - Concepts of virtualization/abstraction
  - **Three Easy Pieces: CPU, Memory, I/O**
  - Concurrency
  - Operating system design goals

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.51
---------------	---	-------

51

## PERSISTENCE

- DRAM: Dynamic Random Access Memory: DIMMs/SIMMs
  - Stores data while power is present
  - When power is lost, data is lost (*volatile*)
  
- Operating System helps “persist” data more permanently
  - I/O device(s): hard disk drive (HDD), solid state drive (SSD)
  - File system(s): “catalog” data for storage and retrieval

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L2.52
---------------	---	-------

52

## PERSISTENCE - 2

```
1  #include <stdio.h>
2  #include <unistd.h>
3  #include <assert.h>
4  #include <fcntl.h>
5  #include <sys/types.h>
6
7  int
8  main(int argc, char *argv[])
9  {
10     int fd = open("/tmp/file", O_WRONLY | O_CREAT
11                 | O_TRUNC, S_IRWXU);
12     assert(fd > -1);
13     int rc = write(fd, "hello world\n", 13);
14     assert(rc == 13);
15     close(fd);
16     return 0;
17 }
```

- `open()`, `write()`, `close()`: OS **system calls** for device I/O
- Note: man page for `open()`, `write()` requires page number: "man 2 `open`", "man 2 `write`", "man `close`"

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L2.53
---------------	---	-------

53

## PERSISTENCE - 3

- To write to disk, OS must:
  - Determine where on disk data should reside
  - Perform sys calls to perform I/O:
    - Read/write to file system (*inode record*)
    - Read/write data to file
- OS provides fault tolerance for system crashes
  - Journaling: Record disk operations in a journal for replay
  - Copy-on-write: replicate shared data across multiple disks - see *ZFS filesystem*
  - Carefully order writes on disk (*especially spindle drives*)

### Linux “man” page example

PTHREAD\_CREATE(3)      Linux Programmer's Manual      PTHREAD\_CREATE(3)

**NAME** top

pthread\_create - create a new thread

**SYNOPSIS** top

```
#include <pthread.h>

int pthread_create(pthread_t *thread, const pthread_attr_t *attr,
void *(*start_routine) (void *), void *arg);

Compile and link with -pthread.
```

**DESCRIPTION** top

The `pthread_create()` function starts a new thread in the calling process. The new thread starts execution by invoking `start_routine()`; `arg` is passed as the sole argument of `start_routine()`.

The new thread terminates in one of the following ways:

- \* It calls `pthread_exit(3)`, specifying an exit status value that is available to another thread in the same process that calls `pthread_join(3)`.
- \* It returns from `start_routine()`. This is equivalent to calling `pthread_exit(3)` with the value supplied in the `return` statement.
- \* It is canceled (see `pthread_cancel(3)`).
- \* Any of the threads in the process calls `exit(3)`, or the main thread performs a return from `main()`. This causes the termination of all threads in the process.

The `attr` argument points to a `pthread_attr_t` structure whose contents are used at thread creation time to determine attributes for the new thread; this structure is initialized using `pthread_attr_init(3)` and related functions. If `attr` is NULL, then the thread is created with default attributes.

60

## CONCURRENCY - 4

- Command line parameter `argv[1]` provides loop length
- Defines number of times the shared counter is incremented
- Loops: 1000

```
prompt> gcc -o pthread pthread.c -Wall -pthread
prompt> ./pthread 1000
Initial value : 0
Final value : 2000
```

- Loops 100000

```
prompt> ./pthread 100000
Initial value : 0
Final value : 143012 // huh??
prompt> ./pthread 100000
Initial value : 0
Final value : 137298 // what ???
```

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L1.61
---------------	---	-------

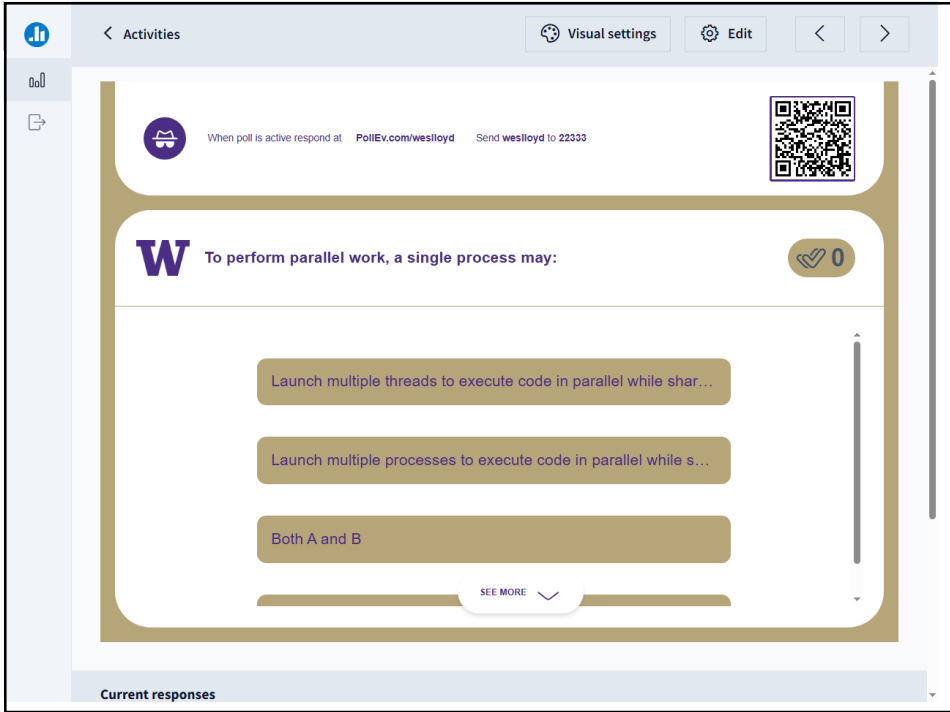

61

## CONCURRENCY - 5

- When loop value is large why do we not achieve 200,000 ?
- C code is translated to (3) assembly code operations
  1. Load counter variable into register
  2. Increment it
  3. Store the register value back in memory
- These instructions happen concurrently and VERY FAST
- (P1 || P2) write incremented register values back to memory, While (P1 || P2) read same memory
- Memory access here is **unsynchronized (non-atomic)**
- *Some of the increments are lost*

62

63

## PARALLEL PROGRAMMING

- To perform parallel work, a single process may:
  - A. Launch multiple threads to execute code in parallel while sharing global data in memory
  - B. Launch multiple processes to execute code in parallel without sharing global data in memory
  - C. Both A and B
  - D. None of the above

65

## SUMMARY: OPERATING SYSTEM DESIGN GOALS

- **ABSTRACTING THE HARDWARE**
  - Makes programming code easier to write
  - Automate sharing resources – save programmer burden
  
- **PROVIDE HIGH PERFORMANCE**
  - Minimize overhead from OS abstraction (Virtualization of CPU, RAM, I/O)
  - Share resources fairly
  - Attempt to tradeoff performance vs. fairness → consider priority
  
- **PROVIDE ISOLATION**
  - User programs can't interfere with each other's virtual machines, the underlying OS, or the sharing of resources

April 1, 2025	TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma	L2.66
---------------	---	-------

66

## SUMMARY: OPERATING SYSTEM DESIGN GOALS - 2

- **RELIABILITY**
  - OS must not crash, 24/7 Up-time
  - Poor user programs must not bring down the system:

Blue Screen

- Other Issues:
  - Energy-efficiency
  - Security (of data)
  - Cloud: Virtual Machines
