

	SEMAPHORE API					
<pre>sem_init():</pre>						
2 sem_t	<pre>de <semaphore.h> s; it(&amp;s, 0, 1); // initialize s to the value 1</semaphore.h></pre>					
= Initializes new semaphore:						
<ul> <li>First param- address of a semaphore</li> <li>Second param: 0- single process, 1- multiprocess         "1" can be used with fork() to synchronize processes</li> <li>Third param: initial value of counter</li> </ul>

SEMAPHORE API - 3
sem_post():
<ul> <li>Increments the semaphore counter by 1.</li> </ul>
<ul> <li>Awakens a thread on the wait queue (if any)</li> <li>(when counter &lt; 0)</li> </ul>
<pre>1 int sem_post(sem_t *s) { 2     increment the value of semaphore s by one 3     if there are one or more threads waiting, wake one 4  }</pre>

C	ORDERING OF EXECUTION - 2 OF 2							
Child Value	I runs, call	s sem_po	st() befo	ore parent calls sem_	wait() State			
0	Create (Child	)	Running	(Child exists; is runnable)	Ready			
0	Interrupt; s	witch→Child	Ready	child runs	Running			
0			Ready	call sem_post()	Running			
1			Ready	increment sem	Running			
1			Ready	wake (nobody)	Running			
1			Ready	sem_post() returns	Running			
1	parent runs		Running	Interrupt; Switch-Parent	Ready			
1	call sem_wait()		Running		Ready			
0	decrement sem		Running		Ready			
0	(sem<0)→awake		Running		Ready			
0	sem_wait() r	etruns	Running		Ready
