

TCSS 422: OPERATING SYSTEMS

**Introduction to Concurrency,
Linux Thread API**

Wes J. Lloyd
School of Engineering and Technology
University of Washington - Tacoma

April 24, 2025 TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma

1

TEXT BOOK COUPON

- 15% off textbook code: **HAPPYPLANET15**
(through Friday Apr 25)
- <https://www.lulu.com/shop/andrea-arpaci-dusseau-and-remzi-arpaci-dusseau/operating-systems-three-easy-pieces-hardcover-version-110/hardcover/product-15gjeeqy.html?q=three+easy+pieces+operating+systems&page=1&pageSize=4>
- With coupon textbook is only \$33.79 + tax & shipping

April 24, 2025 TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma L8.2

2

TCSS 422 – OFFICE HRS – SPRING 2025

- Office Hours plan for Spring (by Zoom):**
- Monday 11:30am - 12:30p** GTA Xinghan
 - NEXT MONDAY: Wes**
- Tuesday 11:30am - 12:30p** GTA Xinghan
- Wednesday 11:00am - 12:00p** Instructor Wes
- Friday 12:00pm - 1:00p** Instructor Wes or GTA Xinghan
 - THIS FRIDAY: Xinghan**

Instructor is available after class at 6pm in CP 229 each day

April 24, 2025 TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma L8.3

3

4

OBJECTIVES – 4/24

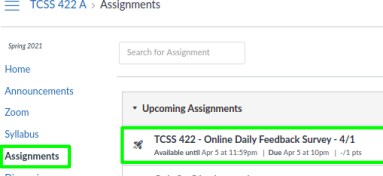

- Questions from 4/22**
- C Tutorial - Pointers, Strings, Exec in C - Due Wed Apr 30 AOE
- Assignment 0 - Due Fri Apr 25 AOE | Assignment 1 soon
- Quiz 1 (Due Thur May 1 AOE) – Quiz 2 (Due Tue May 6 AOE)
- Chapter 9: Proportional Share Schedulers
 - Linux Completely Fair Scheduler
- Chapter 26: Concurrency: An Introduction
 - Race condition
 - Critical section
- Chapter 27: Linux Thread API
 - pthread_create/_join
 - pthread_mutex_lock/_unlock/_trylock/_timelock
 - pthread_cond_wait/_signal/_broadcast

April 24, 2025 TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma L8.5

ONLINE DAILY FEEDBACK SURVEY

- Daily Feedback Quiz in Canvas – Available After Each Class
- Extra credit available for completing surveys **ON TIME**
- Tuesday surveys: due by ~ Wed @ 11:59p
- Thursday surveys: due ~ Mon @ 11:59p

April 24, 2025 TCSS422: Computer Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma L8.6

6

TCSS 422 - Online Daily Feedback Survey - 4/1

Quiz Instructions

Question 1 0.5 pts

On a scale of 1 to 10, please classify your perspective on material covered in today's class:

1	2	3	4	5	6	7	8	9	10
Mostly Review to Me				Equal New and Review					Mostly New to Me

Question 2 0.5 pts

Please rate the pace of today's class:

1	2	3	4	5	6	7	8	9	10
Slow				Just Right					Fast

April 24, 2025 TCSS422: Computer Operating Systems [Spring 2025]
 School of Engineering and Technology, University of Washington - Tacoma L8.7

7

MATERIAL / PACE

- Please classify your perspective on material covered in today's class (47 of 63 respondents – 74.6%) :
 - 1-mostly review, 5-equal new/review, 10-mostly new
 - Average – 6.55 (↑ - previous 6.32)**
- Please rate the pace of today's class:
 - 1-slow, 5-just right, 10-fast
 - Average – 5.19 (↑ - previous 4.98)**

April 24, 2025 TCSS422: Computer Operating Systems [Spring 2025]
 School of Engineering and Technology, University of Washington - Tacoma L8.8

8

FEEDBACK FROM 4/22

- What would happen in an MLFQ scheduler if there are so many jobs overall that the high priority queue never finishes giving each job a time slice to execute before doing a priority boost?**
- cycle time – total time shared among all jobs in a run queue
- time slice – time an individual job runs for
- From slide 6.50:
 - no rule explicitly describes how the cycle time is divided among jobs
 - no rule explicitly describes how time slice is determine
- Any MLFQ problem having this issue would require rules to describe how this scenario is handled to allow a scheduling graph to be drawn

April 24, 2025 TCSS422: Operating Systems [Spring 2025]
 School of Engineering and Technology, University of Washington - Tacoma L8.9

9

REVIEW: MLFQ RULE SUMMARY

- The refined set of MLFQ rules:
 - Rule 1:** If Priority(A) > Priority(B), A runs (B doesn't).
 - Rule 2:** If Priority(A) = Priority(B), A & B run in RR.
 - Rule 3:** When a job enters the system, it is placed at the highest priority.
 - Rule 4:** Once a job uses up its time allotment at a given level (regardless of how many times it has given up the CPU), its priority is reduced(i.e., it moves down on queue).
 - Rule 5:** After some time period S, move all the jobs in the system to the topmost queue.

April 24, 2025 TCSS422: Operating Systems [Spring 2025]
 School of Engineering and Technology, University of Washington - Tacoma L8.10

10

ADDRESSING AN OVERLOADED RUNQUEUE

- One possible way:
 - Cycle time split evenly among jobs in runqueue with no min timeslice
 - For MLFQ, all jobs in runqueue use full timeslice and have priority reduced
 - Not realistic in practice - timeslice becomes too small to be useful
- Another way:
 - Specify min_time_slice (1. ms) per job, and total_cycle_time (10 ms)
 - Job's time_slice = total_cycle_time / jobs_in_runqueue
 - Beyond 10 jobs, other jobs receive no runtime this cycle
 - Jobs receiving no runtime are scheduled first in next cycle
 - Jobs could pile up and experience multi-cycle delays
 - More realistic

April 24, 2025 TCSS422: Operating Systems [Spring 2025]
 School of Engineering and Technology, University of Washington - Tacoma L8.11

11

OBJECTIVES – 4/24

- Questions from 4/22
- C Tutorial - Pointers, Strings, Exec in C - Due Wed Apr 30 AOE**
- Assignment 0 - Due Fri Apr 25 AOE | Assignment 1 soon
- Quiz 1 (Due Thur May 1 AOE) – Quiz 2 (Due Tue May 6 AOE)

21

BEYOND CFS → EEVDF SCHEDULER

- Earliest Eligible Virtual Deadline First (EEVDF) Scheduler
 - **Linux kernel version 6.6**, October 29, 2023
 - First described in a research article in 1995
- Like CFS, EEVDF aims to distribute CPU time equally among all runnable tasks with the same priority.
- EEVDF assigns a virtual runtime to each task, creating a "lag" value that is used to determine whether a task has received its fair share of CPU time
 - A task with a positive lag is owed CPU time
 - A task with negative lag has exceeded its timeshare
- EEVDF calculates a virtual deadline (VD) for each task with lag greater or equal to zero
- Task with the earliest virtual deadline is selected to run next
- Virtual deadlines enable latency-sensitive tasks with shorter-time slices to be prioritized more than CFS which helps improve responsiveness
- More info: <https://docs.kernel.org/scheduler/sched-eevdf.html>

THREADS

©Alfred Park, <http://randu.org/tutorials/threads>

April 24, 2025
TCCS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.25

25

THREADS - 2

- Enables a single process (program) to have multiple "workers"
 - This is parallel programming...
- Supports independent path(s) of execution within a program *with shared memory* ...
- Each thread has its own Thread Control Block (TCB)
 - PC, registers, SP, and stack
- Threads share code segment, data segment, and heap are shared

■ **What is an embarrassingly parallel program?**

April 24, 2025
TCCS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.26

26

PROCESS AND THREAD METADATA

■ Thread Control Block vs. Process Control Block

Thread Identification

Thread state
CPU information:

- Program counter
- Register contents

Thread priority
Pointer to process that created this thread
Pointers to all other threads created by this thread

Process Identification

Process status
Process state:

- Process status word
- Register contents
- Main memory
- Resources
- Process priority
- Accounting

April 24, 2025
TCCS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.27

27

SHARED ADDRESS SPACE

■ Every thread has its own stack / PC

A Single-Threaded Address Space

Two threaded Address Space

April 24, 2025
TCCS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.28

28

THREAD CREATION EXAMPLE

```

#include <stdio.h>
#include <assert.h>
#include <pthread.h>

void *mythread(void *arg) {
    printf("%s\n", (char *) arg);
    return NULL;
}

int
main(int argc, char *argv[]) {
    pthread_t p1, p2;
    int rc;
    printf("main: begin\n");
    rc = pthread_create(&p1, NULL, mythread, "A"); assert(rc == 0);
    rc = pthread_create(&p2, NULL, mythread, "B"); assert(rc == 0);
    // join waits for the threads to finish
    rc = pthread_join(p1, NULL); assert(rc == 0);
    rc = pthread_join(p2, NULL); assert(rc == 0);
    printf("main: end\n");
    return 0;
}
    
```

April 24, 2025
TCCS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.29

29

POSSIBLE ORDERINGS OF EVENTS

	int main()	Thread 1.	Thread 2
Starts running	Prints 'main: begin'		
Creates Thread 1			
Creates Thread 2			
Waits for T1		Runs	
		Prints 'A'	
		Returns	
Waits for T2			Runs
			Prints 'B'
			Returns
Prints 'main: end'			

April 24, 2025
TCCS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.30

30

POSSIBLE ORDERINGS OF EVENTS - 2

Int main()	Thread 1	Thread 2
Starts running		
Prints 'main: begin'		
Creates Thread 1		
	Runs	
	Prints 'A'	
	Returns	
Creates Thread 2		
		Runs
		Prints 'B'
		Returns
Waits for T1	Returns immediately	
Waits for T2		Returns immediately
Prints 'main: end'		

April 24, 2025
TCCS422: Operating Systems (Spring 2025)
School of Engineering and Technology, University of Washington - Tacoma
L8.31

31

POSSIBLE ORDERINGS OF EVENTS - 3

Int main()	Thread 1	Thread 2
Starts running		
Prints 'main: begin'		
Creates Thread 1		
Creates Thread 2		
Waits for T1		
	Runs	
	Prints 'A'	
	Returns	
Waits for T2		
		Runs
		Prints 'B'
		Returns
Prints 'main: end'		Immediately returns

What if execution order of events in the program matters?

April 24, 2025
TCCS422: Operating Systems (Spring 2025)
School of Engineering and Technology, University of Washington - Tacoma
L8.32

32

COUNTER EXAMPLE

- Counter example
- A + B : ordering
- Counter: incrementing global variable by two threads
- *Is the counter example embarrassingly parallel?*
- *What does the parallel counter program require?*

April 24, 2025
TCCS422: Operating Systems (Spring 2025)
School of Engineering and Technology, University of Washington - Tacoma
L8.33

33

PROCESSES VS. THREADS

- What's the difference between forks and threads?
 - **Forks:** duplicate a process
 - Think of **CLONING** - There will be two identical processes at the end
 - **Threads:** no duplication of code/heap, lightweight execution threads

single-threaded process

multithreaded process

April 24, 2025
TCCS422: Operating Systems (Spring 2025)
School of Engineering and Technology, University of Washington - Tacoma
L8.34

34

OBJECTIVES - 4/24

- Questions from 4/22
- C Tutorial - Pointers, Strings, Exec in C - Due Wed Apr 30 AOE
- Assignment 0 - Due Fri Apr 25 AOE | Assignment 1 soon
- Quiz 1 (Due Thur May 1 AOE) - Quiz 2 (Due Tue May 6 AOE)
- Chapter 9: Proportional Share Schedulers
 - Linux Completely Fair Scheduler
- Chapter 26: Concurrency: An Introduction
 - **Race condition**
 - Critical section
- Chapter 27: Linux Thread API
 - pthread_create/_join
 - pthread_mutex_lock/_unlock/_trylock/_timelock
 - pthread_cond_wait/_signal/_broadcast

April 24, 2025
TCCS422: Operating Systems (Spring 2025)
School of Engineering and Technology, University of Washington - Tacoma
L8.35

35

RACE CONDITION

- What is happening with our counter?
 - When counter=50, consider code: counter = counter + 1
 - If synchronized, counter will = 52

OS	Thread1	Thread2	(after instruction) PC %eax counter
	before critical section		100 0 50
	mov 0x8049a1c, %eax		105 50 50
	add \$0x1, %eax		108 51 50
	Interrupt		
	save T1's state		
	restore T2's state		
		mov 0x8049a1c, %eax	100 0 50
		add \$0x1, %eax	105 50 50
		mov %eax, 0x8049a1c	108 51 50
	Interrupt		
	save T2's state		
	restore T1's state		
		mov %eax, 0x8049a1c	108 51 50
			113 51 51

April 24, 2025
TCCS422: Operating Systems (Spring 2025)
School of Engineering and Technology, University of Washington - Tacoma
L8.36

36

OBJECTIVES – 4/24

- Questions from 4/22
- C Tutorial - Pointers, Strings, Exec in C - Due Wed Apr 30 AOE
- Assignment 0 - Due Fri Apr 25 AOE | Assignment 1 soon
- Quiz 1 (Due Thur May 1 AOE) – Quiz 2 (Due Tue May 6 AOE)
- Chapter 9: Proportional Share Schedulers
 - Linux Completely Fair Scheduler
- Chapter 26: Concurrency: An Introduction
 - Race condition
 - **Critical section**
- Chapter 27: Linux Thread API
 - pthread_create/_join
 - pthread_mutex_lock/_unlock/_trylock/_timelock
 - pthread_cond_wait/_signal/_broadcast

April 24, 2025
TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.37

37

CRITICAL SECTION

- Code that accesses a shared variable must not be **concurrently** executed by more than one thread
- Multiple *active* threads inside a **critical section** produce a **race condition**.
- **Atomic execution** (all code executed as a unit) must be ensured in **critical** sections
 - These sections must be **mutually exclusive**

April 24, 2025
TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.38

38

LOCKS

- To demonstrate how critical section(s) can be executed "atomically-as a unit" Chapter 27 & beyond introduce locks

```

1 lock_t mutex;
2 . . .
3 lock(&mutex);
4 balance = balance + 1;
5 unlock(&mutex);
    
```

Critical section

- Counter example revisited

April 24, 2025
TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.39

39

COUNTER EXAMPLE

- With locks
 - 2 threads count to 16 million
 - ~1.4 seconds
 - COUNT IS CORRECT – no data loss
- Without locks
 - 2 threads count to 16 million
 - ~0.03 seconds
 - COUNT IS INCORRECT - DATA IS LOST
- Correct version is 46.6 x slower
 - Cost is 16 million Lock & Unlock API calls

41

CHAPTER 27 - LINUX THREAD API

April 24, 2025
TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.42

42

OBJECTIVES – 4/24

- Questions from 4/22
- C Tutorial - Pointers, Strings, Exec in C - Due Wed Apr 30 AOE
- Assignment 0 - Due Fri Apr 25 AOE | Assignment 1 soon
- Quiz 1 (Due Thur May 1 AOE) – Quiz 2 (Due Tue May 6 AOE)
- Chapter 9: Proportional Share Schedulers
 - Linux Completely Fair Scheduler
- Chapter 26: Concurrency: An Introduction
 - Race condition
 - Critical section
- Chapter 27: Linux Thread API
 - **pthread_create/ join**
 - pthread_mutex_lock/_unlock/_trylock/_timelock
 - pthread_cond_wait/_signal/_broadcast

April 24, 2025 TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma L8.43

43

THREAD CREATION

- pthread_create

```

#include <pthread.h>

int
pthread_create( pthread_t*      thread,
                const pthread_attr_t* attr,
                void*          (*start_routine)(void*),
                void*          arg);
    
```

- thread: thread struct
- attr: stack size, scheduling priority... (optional)
- start_routine: function pointer to thread routine
- arg: argument to pass to thread routine (optional)

April 24, 2025 TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma L8.44

44

PTHREAD_CREATE – PASS ANY DATA

```

#include <pthread.h>

typedef struct __myarg_t {
    int a;
    int b;
} myarg_t;

void *mythread(void *arg) {
    myarg_t *m = (myarg_t *) arg;
    printf("%d %d\n", m->a, m->b);
    return NULL;
}

int main(int argc, char *argv[]) {
    pthread_t p;
    int rc;

    myarg_t args;
    args.a = 10;
    args.b = 20;
    rc = pthread_create(&p, NULL, mythread, &args);
}
    
```

April 24, 2025 TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma L8.45

45

PASSING A SINGLE VALUE

Using this approach on your Ubuntu VM,
 How large (in bytes) can the primitive data type be?

```

3     printf("%d\n", m);
...
9     int rc, m;
10    pthread_create(&p, NULL, mythread, (void *) 100);
11    pthread_join(p, (void **) &m);
12    printf("returned %d\n", m);
13    return 0;
14 }
    
```

How large (in bytes) can the primitive data type
 be on a 32-bit operating system?

April 24, 2025 TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma L8.46

46

WAITING FOR THREADS TO FINISH

```

int pthread_join(pthread_t thread, void **value_ptr);
    
```

- thread: which thread?
- value_ptr: pointer to return value
type is dynamic / agnostic
- Returned values *must* be on the heap
- Thread stacks destroyed upon thread termination (join)
- Pointers to thread stack memory addresses are invalid
 - May appear as gibberish or lead to crash (seg fault)
- Not all threads join – **What would be Examples ??**

April 24, 2025 TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma L8.47

47

```

struct myarg {
    int a;
    int b;
};

void *worker(void *arg)
{
    struct myarg *input = (struct myarg *) arg;
    printf("a=%d b=%d\n", input->a, input->b);
    struct myarg output;
    output.a = 1;
    output.b = 2;
    return (void *) &output;
}

int main (int argc, char * argv[])
{
    pthread_t p1;
    struct myarg args;
    struct myarg *ret_args;
    args.a = 10;
    args.b = 20;
    pthread_
    pthread_
    printf("
    return 0;
}
    
```

What will this code do?

```

$ ./pthread_struct
a=10 b=20
Segmentation fault (core dumped)
        
```

How can this code be fixed?

April 24, 2025 TCSS422: Operating Systems [Spring 2025] School of Engineering and Technology, University of Washington - Tacoma L8.48

48

How about this code?

```

struct myarg {
    int a;
    int b;
};

void *worker(void *arg)
{
    struct myarg *input = (struct myarg *) arg;
    printf("a=%d b=%d\n", input->a, input->b);
    input->a = 1;
    input->b = 2;
    return (void *) &input;
}

int main (int argc, char * argv[])
{
    pthread_t p1;
    struct myarg args;
    struct myarg *ret_args;
    args.a = 10;
    args.b = 20;
    pthread_create(&p1, NULL, worker, &args);
    pthread_join(p1, (void *)&ret_args);
    printf("returned %d %d\n", ret_args->a, ret_args->b);
    return 0;
}
    
```

**\$. /pthread_struct
 a=10 b=20
 returned 1 2**

49

ADDING CASTS

- Casting
- Suppresses compiler warnings when passing "typed" data where (void) or (void *) is called for
- Example: uncasted capture in pthread_join
 pthread_int.c: In function 'main':
 pthread_int.c:34:20: warning: passing argument 2 of 'pthread_join' from incompatible pointer type [-Wincompatible-pointer-types]
 pthread_join(p1, &p1val);
- Example: uncasted return
 In file included from pthread_int.c:3:0:
 /usr/include/pthread.h:250:12: note: expected 'void **' but argument 1s of type 'int **'
 extern int pthread_join (pthread_t __th, void **__thread_return);

April 24, 2025
TCCS422: Operating Systems (Spring 2025)
 School of Engineering and Technology, University of Washington - Tacoma
L8.50

50

ADDING CASTS - 2

- pthread_join
 int * p1val;
 int * p2val;
 pthread_join(p1, (void *)&p1val);
 pthread_join(p2, (void *)&p2val);
- return from thread function
 int * counterval = malloc(sizeof(int));
 *counterval = counter;
 return (void *) counterval;

51

OBJECTIVES – 4/24

- Questions from 4/22
- C Tutorial - Pointers, Strings, Exec in C - Due Wed Apr 30 AOE
- Assignment 0 - Due Fri Apr 25 AOE | Assignment 1 soon
- Quiz 1 (Due Thur May 1 AOE) – Quiz 2 (Due Tue May 6 AOE)
- Chapter 9: Proportional Share Schedulers
 - Linux Completely Fair Scheduler
- Chapter 26: Concurrency: An Introduction
 - Race condition
 - Critical section
- Chapter 27: Linux Thread API
 - pthread_create/_join
 - pthread_mutex_lock/ unlock/ trvlock/ timelock
 - pthread_cond_wait/ signal/ broadcast

April 24, 2025
TCCS422: Operating Systems (Spring 2025)
 School of Engineering and Technology, University of Washington - Tacoma
L8.52

52

LOCKS

- pthread_mutex_t data type
- /usr/include/bits/pthread_types.h

```

// Global Address Space
static volatile int counter = 0;
pthread_mutex_t lock;

void *worker(void *arg)
{
    int i;
    for (i=0; i<10000000; i++) {
        int rc = pthread_mutex_lock(&lock);
        assert(rc==0);
        counter = counter + 1;
        pthread_mutex_unlock(&lock);
    }
    return NULL;
}
    
```

April 24, 2025
TCCS422: Operating Systems (Spring 2025)
 School of Engineering and Technology, University of Washington - Tacoma
L8.53

53

LOCKS - 2

- Ensure critical sections are executed atomically-as a unit
 - Provides implementation of "Mutual Exclusion"
- API

```

int pthread_mutex_lock(pthread_mutex_t *mutex);
int pthread_mutex_unlock(pthread_mutex_t *mutex);
                
```
- Example w/o initialization & error checking

```

pthread_mutex_t lock;
pthread_mutex_lock(&lock);
x = x + 1; // or whatever your critical section is
pthread_mutex_unlock(&lock);
                
```

 - Blocks forever until lock can be obtained
 - Enters critical section once lock is obtained
 - Releases lock

April 24, 2025
TCCS422: Operating Systems (Spring 2025)
 School of Engineering and Technology, University of Washington - Tacoma
L8.54

54

LOCK INITIALIZATION

- Assigning the constant

```
pthread_mutex_t lock = PTHREAD_MUTEX_INITIALIZER;
```
- API call:

```
int rc = pthread_mutex_init(&lock, NULL);
assert(rc == 0); // always check success!
```
- Initializes mutex with attributes specified by 2nd argument
- If NULL, then default attributes are used
- Upon initialization, the mutex is initialized and unlocked

April 24, 2025
TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.55

55

LOCKS - 3

- Error checking wrapper

```
// Use this to keep your code clean but check for failures
// Only use if exiting program is OK upon failure
void Pthread_mutex_lock(pthread_mutex_t *mutex) {
    int rc = pthread_mutex_lock(mutex);
    assert(rc == 0);
}
```
- What if lock can't be obtained?

```
int pthread_mutex_trylock(pthread_mutex_t *mutex);
int pthread_mutex_timelock(pthread_mutex_t *mutex,
                           struct timespec *abs_timeout);
```
- trylock – returns immediately (fails) if lock is unavailable
- timelock – tries to obtain a lock for a specified duration

April 24, 2025
TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.56

56

TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.57

57

CONDITIONS AND SIGNALS

- Condition variables support "signaling" between threads

```
int pthread_cond_wait(pthread_cond_t *cond,
                      pthread_mutex_t *mutex);
int pthread_cond_signal(pthread_cond_t *cond);
```
- pthread_cond_t datatype
- pthread_cond_wait()
 - Puts thread to "sleep" (waits) (THREAD IS BLOCKED)
 - Threads added to >FIFO queue<. lock is released
 - Waits (*listens*) for a "signal" (NON-BUSY WAITING, no polling)
 - When signal occurs, interrupt fires, wakes up first thread, (THREAD IS RUNNING), lock is provided to thread

April 24, 2025
TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.58

58

CONDITIONS AND SIGNALS - 2

```
int pthread_cond_signal(pthread_cond_t * cond);
int pthread_cond_broadcast(pthread_cond_t * cond);
```

- pthread_cond_signal()
 - Called to send a "signal" to wake-up first thread in **FIFO "wait" queue**
 - The goal is to unblock a thread to respond to the signal
- pthread_cond_broadcast()
 - Unblocks **all** threads in **FIFO "wait" queue**, currently blocked on the specified condition variable
 - Broadcast is used when all threads should wake-up for the signal
- Which thread is unblocked first?
 - Determined by OS scheduler (based on priority)
 - Thread(s) awoken based on placement order in **FIFO wait queue**
 - When awoken threads acquire lock as in pthread_mutex_lock()

April 24, 2025
TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.59

59

CONDITIONS AND SIGNALS - 3

- Wait example:

```
pthread_mutex_t lock = PTHREAD_MUTEX_INITIALIZER;
pthread_cond_t cond = PTHREAD_COND_INITIALIZER;

pthread_mutex_lock(&lock);
while (initialized == 0)
    pthread_cond_wait(&cond, &lock);
// Perform work that requires lock
a = a + b;
pthread_mutex_unlock(&lock);
```
- wait puts thread to sleep, releases lock
- when awoken, lock reacquired (but then released by this code)
- When initialized, another thread signals

```
pthread_mutex_lock(&lock);
initialized = 1;
pthread_cond_signal(&init);
pthread_mutex_unlock(&lock);
```

State variable set, Enables other thread(s) to proceed above.

April 24, 2025
TCSS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.60

60

CONDITION AND SIGNALS - 4

```
pthread_mutex_t lock = PTHREAD_MUTEX_INITIALIZER;
pthread_cond_t cond = PTHREAD_COND_INITIALIZER;

pthread_mutex_lock(&lock);
while (initialized == 0)
    pthread_cond_wait(&cond, &lock);
// Perform work that requires lock
a = a + b;
pthread_mutex_unlock(&lock);
```

- Why do we wait inside a while loop?
- The while ensures upon awakening the condition is rechecked
 - A signal is raised, but the pre-conditions required to proceed may have not been met. ****MUST CHECK STATE VARIABLE****
 - Without checking the state variable the thread may proceed to execute when it should not. (e.g. too early)

TCCS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.61

61

PTHREADS LIBRARY

- **Compilation:**
gcc requires special option to require programs with pthreads:
 - gcc -pthread pthread.c -o pthread
 - Explicitly links library with compiler flag
 - RECOMMEND: using makefile to provide compiler arguments
- List of pthread manpages
 - man -k pthread

April 24, 2025
TCCS422: Operating Systems [Spring 2025]
School of Engineering and Technology, University of Washington - Tacoma
L8.62

62

SAMPLE MAKEFILE

```
CC=gcc
CFLAGS=-pthread -I. -Wall

binaries=pthread pthread_int pthread_lock_cond pthread_struct
all: $(binaries)

pthread_mult: pthread.c pthread_int.c
$(CC) $(CFLAGS) $^ -o $@

clean:
$(RM) -f $(binaries) *.o
```

- Example builds multiple single file programs
 - All target
- pthread_mult
 - Example if multiple source files should produce a single executable
- clean target
