

OBJECTIVES Syllabus, Course Introduction C Review Demographics Survey ■ Chapter 4: Operating Systems - Three Easy Pieces Introduce operating systems Management of resources Concepts of virtualization/abstraction CPU, Memory, I/O Operating system design goals TCSS422: Operating Systems [Winter 2018]

Institute of Technology, University of Washington - Tacoma

January 3, 2018

TCSS422 - WINTER 2018 COMPUTER OPERATING SYSTEMS

- Syllabus
- Grading
- Schedule
- Assignments

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

L1.3

TCSS 422 - Winter 2018 Special features!

- Going green...
 - 15% reduction of carbon footprint
- Just 17 class meetings
 - In contrast to usual 20
 - 3 Monday holidays: Jan 1, Jan 15, Feb 19
- ■Saves commuting time
 - Less fuel expenses
- Easier to achieve perfect attendance
- Final exam Monday March 12th
 - Just 68 days from now... (9.7 weeks)

January 3, 2018

TCSS422: Operating Systems [Winter 2018]
Institute of Technology, University of Washington - Tacoma

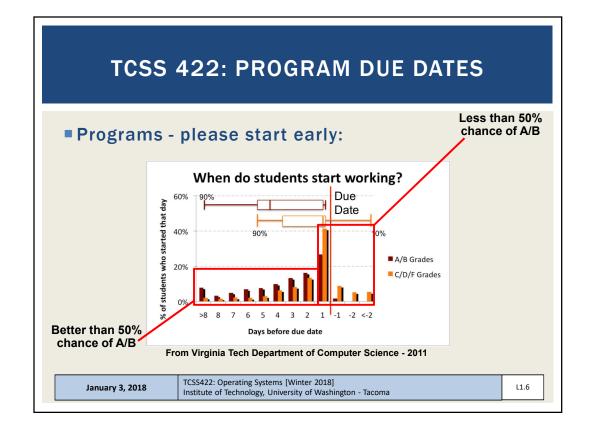

TCSS 422 WINTER 2018

TCS422 COURSE WORK

- Assignments
 - Assignment 0: Linux /scripting
 - Assignments 1 3 ~4: roughly every two weeks
- Quizzes
 - ~ 7-8 quizzes
 - Drop lowest two
 - Variety of formats: in class, online, reading, tutorial / activity
- Exams: Midterm and Final
 - Two pages of notes, calculator
 - Final exam is comprehensive, with emphasis on new material

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

TCSS 422: PROGRAM DUE DATES

- Programs please start early
 - Work as if deadline is several days earlier
 - Allows for a "buffer" for running into unexpected problems
 - Underestimation of the task at hand
 - Allows time to seek C help from SCI 106/108 lab mentors
 - If less familiar with C/pointers (TCSS 333), BUDGET MORE TIME
 - New this quarter 5% bonus for submitting <u>by the</u> <u>originally posted due date</u>
 - Excludes any class-wide extensions

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

L1.7

UBUNTU 16.04 - VIRTUAL MACHINE

- Ubuntu 16.04
 - Open source version of Debian-package based Linux
 - Package management: "apt get" repositories
 - See: https://packages.ubuntu.com/
- Ubuntu Advantages
 - Enterprise Linux Distribution
 - Free, widely used by developers
 - Long term releases (LTS) every 2 years, good for servers
 - 6 month feature releases, good for sharing new features with the community

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

UBUNTU 16.04 - VIRTUAL MACHINE INSTALLATION

- Ubuntu 16.04
- Search online for YouTube videos, tutorials
- Search how to install the "Guest Additions"
 - Provides file system sharing, clipboard integration, mouse tricks
- Windows 10
- https://www.youtube.com/watch?v=DPIPC25xzUM
- Mac OS X
- https://www.youtube.com/watch?v=sNixOS6mHIU

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

L1.9

C PROGRAMING IN TCSS 422

- Many OSes are coded primarily in C and Assembly Language
- Computerworld, 2017 Tech Forecast Survey

What legacy platforms do you still support and hire for? None 65% DB2 13% C 10% Cobol 9% Assembly language 8% Perl 5% Delphi Object Pascal 3% Fortran 3% REXX 3% Pascal 2% Other 9%

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

C MENTORING

- https://www.tacoma.uw.edu/institute-technology/studentsupport-workshops-mentors
- Institute of Technology Mentors
- Located in Science 106 / 108 Labs
- Monday Thursday: ~10 am 7 pm
- Friday: ~ 12-5pm
- Winter quarter hours to be posted

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

L1.11

INSTRUCTOR HELP

- Office hours: to be announced, and by appointment
- End of class: good for quick questions, assignment Q&A
- It will be difficult to tutor all 70 students individually on C
- Take <u>ownership</u> of your educational outcome
 - Time spent in TCSS 422 is just ~0.4% of an IT career
 - Make the most of this limited time
 - Maximize your educational investment
 - *** Ask questions in class ***
 - Also questions after class, email, Canvas discussion boards
 - Seek help using UWT resources, the internet, YouTube videos (video.google.com) and online tutorials

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

CLASS PARTICIPATION

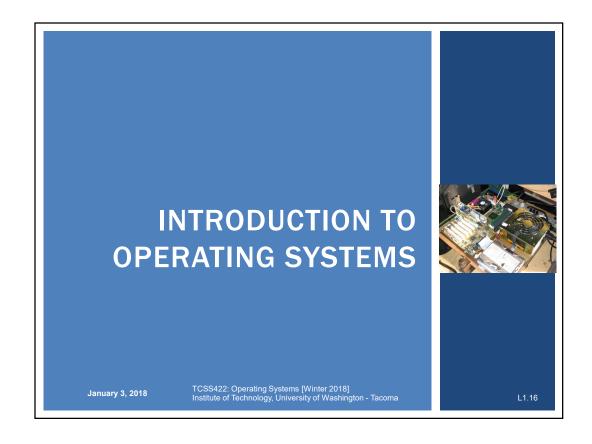

- Questions and discussion are strongly encouraged
 - Leverage your educational investment
 - All questions are encouraged! All are good!
 - Better to ask redundant questions, than to be unsure!
- Daily feedback surveys
 - Helpful to know if topics are not clear
 - Use the survey to write questions that come to you during the lecture
- Poll-EV to be introduced

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

OBJECTIVES

- Chapter 4: Operating Systems Three Easy Pieces
 - Introduce operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - CPU, Memory, I/O
 - Operating system design goals

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

L1.17

OPERATING SYSTEMS

- Responsible for:
 - Making it easy to run programs
 - •Allowing programs to share memory
 - Enabling programs to interact with devices

OS is in charge of making sure the system operates correctly and efficiently.

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

RESOURCE MANAGEMENT

- ■The OS is a resource manager
- Manages CPU, disk, network I/O
- Enables many programs to
 - Share the CPU
 - Share the underlying physical memory (RAM)
 - Share physical devices
 - Disks
 - Network Devices
 - ...

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

L1.19

VIRTUALIZATION

- Operating systems present physical resources as virtual representations to the programs sharing them
 - Physical resources: CPU, disk, memory, ...
 - The virtual form is "abstract"
 - The OS presents an illusion that each user program runs in isolation on its own hardware
 - This virtual form is general, powerful, and easy-to-use

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

ABSTRACTIONS

- What form of abstraction does the OS provide?
 - CPU
 - Process and/or thread
 - Memory
 - Address space
 - → large array of bytes
 - All programs see the same "size" of RAM
 - Disk
 - Files

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

L1.21

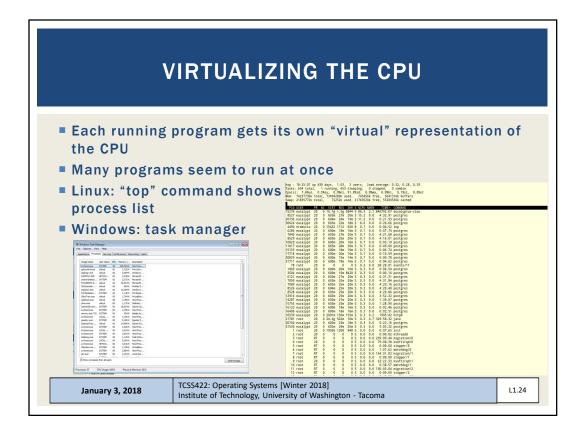

WHY ABSTRACTION?

- Allow applications to reuse common facilities
- Make different devices look the same
 - Easier to write common code to use devices
 - Linux/Unix Block Devices
- Provide higher level abstractions
- More useful functionality

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

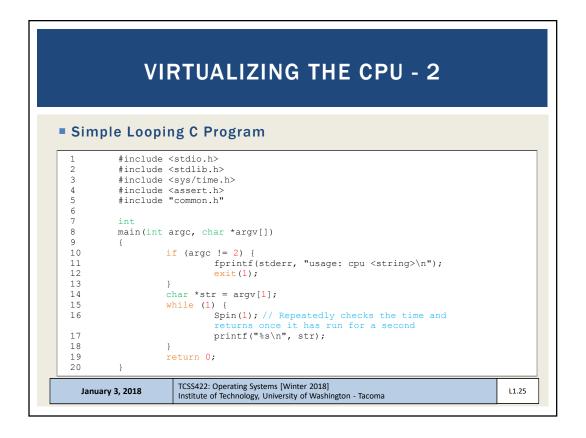

ABSTRACTION CHALLENGES What level of abstraction? How much of the underlying hardware should be exposed? What if too much? What if too little? What are the correct abstractions? Security concerns

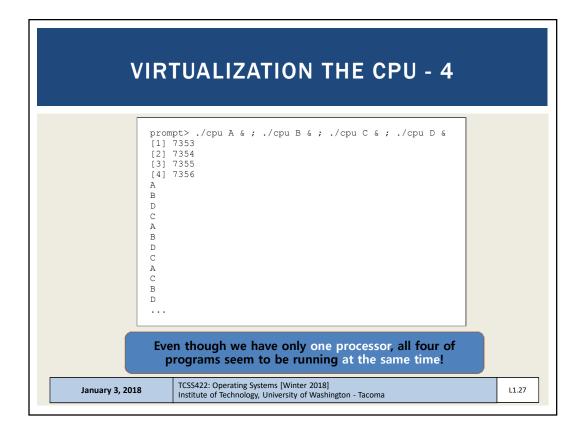

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

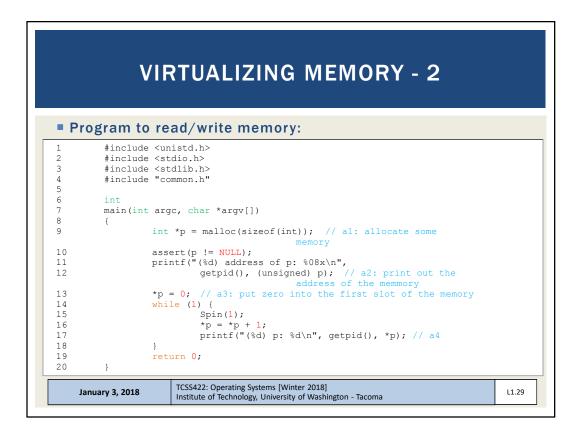

L1.23

January 3, 2018

VIRTUALIZING MEMORY Computer memory is treated as a large array of bytes Programs store all data in this large array Read memory (load) Specify an address to read data from Write memory (store) Specify data to write to an address TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

TCSS422: Operating Systems [Winter 2018]

Institute of Technology, University of Washington - Tacoma

January 3, 2018

VIRTUALIZING MEMORY - 4

Multiple instances of mem.c

```
prompt> ./mem &; ./mem &
[1] 24113
[2] 24114
(24113) memory address of p: 00200000
(24114) memory address of p: 00200000
(24113) p: 1
(24114) p: 1
(24114) p: 2
(24113) p: 2
(24113) p: 3
(24114) p: 3
...
```

- (int*)p receives the same memory location 00200000
- Why does modifying (int*)p in program #1 (PID=24113), not interfere with (int*)p in program #2 (PID=24114)?
 - The OS has "virtualized" memory, and provides a "virtual" address

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

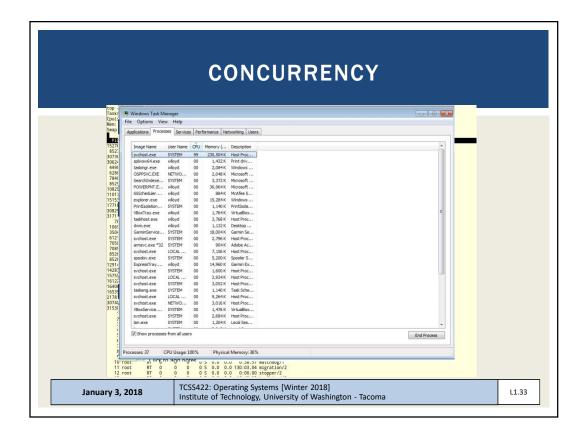

L1.31

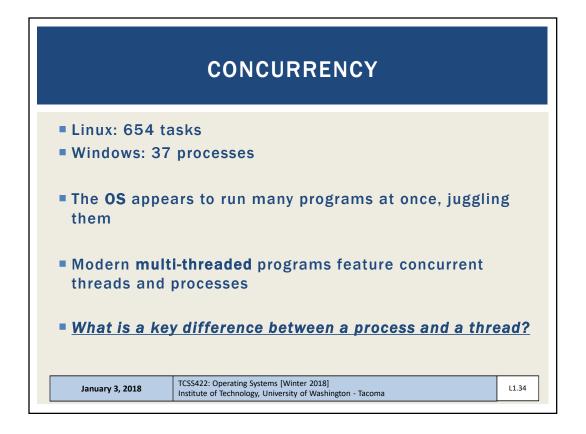

VIRTUAL MEMORY

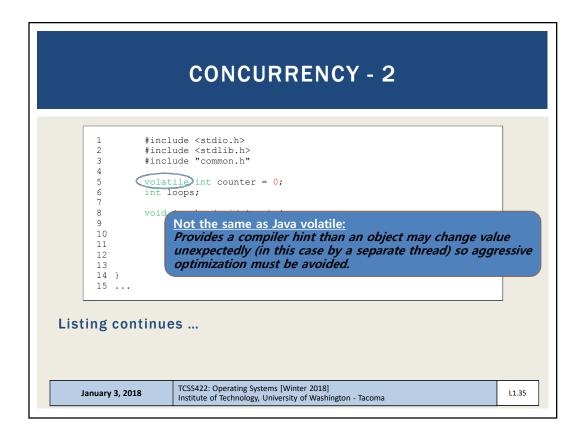

- Key take-aways:
- Each process (program) has its own virtual address space
- The OS maps virtual address spaces onto physical memory
- A memory reference from one process can not affect the address space of others.
 - Isolation
- Physical memory, a <u>shared resource</u>, is managed by the OS

January 3, 2018

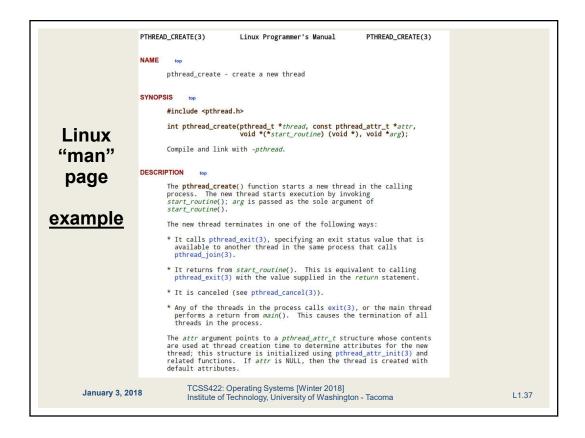

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma

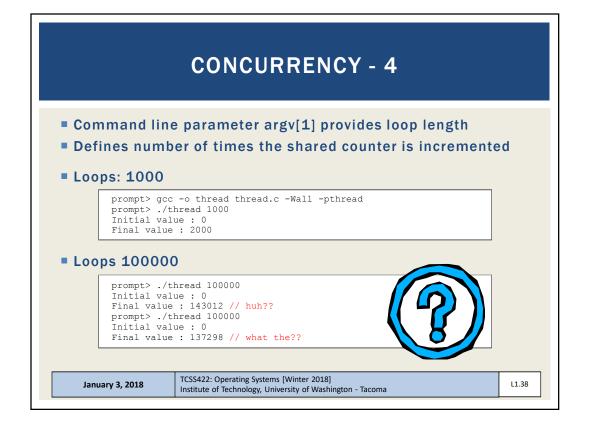

CONCURRENCY - 3 17 main(int argc, char *argv[]) 18 19 if (argc != 2) { 20 fprintf(stderr, "usage: threads <value>\n"); 21 exit(1); 22 2.3 loops = atoi(argv[1]); 24 pthread_t p1, p2; printf("Initial value : %d\n", counter); 25 26 27 Pthread_create(&p1, NULL, worker, NULL); Pthread_create(&p2, NULL, worker, NULL); Pthread_join(p1, NULL); Pthread_join(p2, NULL); printf("Final value: %d\n", counter); 2.8 29 30 31 return 0; Program creates two threads Check documentation: "man pthread_create" worker() method counts from 0 to argv[1] (loop) TCSS422: Operating Systems [Winter 2018] January 3, 2018 L1.36 Institute of Technology, University of Washington - Tacoma

CONCURRENCY - 5

- When loop value is large why do we not achieve 200000?
- C code is translated to (3) assembly code operations
- 1. Load counter variable into register
- 2. Increment it
- 3. Store the register value back in memory
- These instructions happen concurrently and VERY FAST
- (P1 || P2) write incremented register values back to memory,While (P1 || P2) read same memory
- Memory access here is unsynchronized (non-atomic)
- Some of the increments are lost

January 3, 2018

TCSS422: Operating Systems [Winter 2018] Institute of Technology, University of Washington - Tacoma
