

TCSS 422: OPERATING SYSTEMS

INTRODUCTION

Wes J. Lloyd
School of Engineering and Technology
University of Washington - Tacoma

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

TCSS 422 – Winter 2019

- Going green...
 - 10% reduction of carbon footprint
- 18 class meetings
 - In contrast to usual 20
 - 2 Monday holidays:
Jan 21, Feb 18
- Saves commuting time
 - Less fuel expenses
- Easier to achieve perfect attendance
- Final exam Monday March 18th

January 7, 2019

TCSS422: Operating Systems [Winter 2018]
School of Engineering and Technology, University of Washington - Tacoma

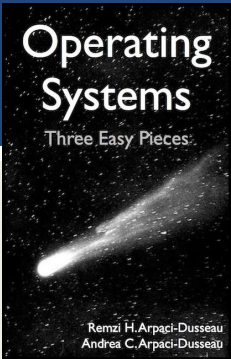

TCSS 422
WINTER
2019

L1.2

OBJECTIVES

Operating Systems

Three Easy Pieces

- Syllabus, Course Introduction
- C Review
- Demographics Survey
- Chapter 4: Operating Systems – Three Easy Pieces
 - Introduce operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - CPU, Memory, I/O
 - Operating system design goals

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.3

TCSS422 – WINTER 2019
COMPUTER OPERATING SYSTEMS

- Syllabus
- Grading
- Schedule
- Assignments

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.4

TCS422 COURSE WORK

■ **Assignments**

■ Assignment 0: Linux /scripting

■ Assignments 1 – 3 (4): roughly every two weeks

■ Submit ALL programming assignments via Canvas – no email

- Email submissions are prone to be lost

■ **Quizzes**

■ ~ 5-6 quizzes

■ Drop lowest two

■ Variety of formats: in class, online, reading, tutorial / activity

■ **Exams: Midterm and Final**

■ Two pages of notes, calculator

■ Final exam is comprehensive, with emphasis on new material

January 7, 2019

School of Engineering and Technology, University of Washington - Tacoma

L1.5

TCSS 422: PROGRAM DUE DATES

■ **Programs - please start early:**

When do students start working?

Days before due date	A/B Grades (%)	C/D/F Grades (%)
>8	~10	~5
8	~10	~5
7	~10	~5
6	~10	~5
5	~10	~5
4	~10	~5
3	~10	~5
2	~15	~10
1	~25	~15
0	~40	~20
-1	~10	~5
<-2	~5	~2

From Virginia Tech Department of Computer Science - 2011

January 7, 2019

TCCS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.6

Slides by Wes J. Lloyd

L1.3

TCSS 422: PROGRAM DUE DATES

■ Programs - please start early

- Work as if deadline is several days earlier
- Allows for a “buffer” for running into unexpected problems
 - Underestimation of the task at hand
 - Allows time to seek C help from SCI 106/108 lab mentors
 - If less familiar with C/pointers (TCSS 333),
BUDGET MORE TIME

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.7

UBUNTU 18.04 – VIRTUAL MACHINE

■ Ubuntu 18.04

- Open source version of Debian-package based Linux
- Package management: “apt get” repositories
 - See: <https://packages.ubuntu.com/>

■ Ubuntu Advantages

- Enterprise Linux Distribution
- Free, widely used by developers
- Long term releases (LTS) every 2 years, good for servers
- 6 month feature releases, good for sharing new features with the community

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.8

UBUNTU 18.04 – VIRTUAL MACHINE INSTALLATION

- Ubuntu 18.04 on Oracle VirtualBox
- HOW-TO installation videos:
 - Windows 10
 - <https://www.youtube.com/watch?v=QbmRXJJKsvs>
 - Mac OS X (not specific to 18.04)
 - <https://www.youtube.com/watch?v=sNixOS6mHIU>
- Guest Additions
 - Provides file system sharing, clipboard integration, mouse tricks
- <https://www.youtube.com/watch?v=qNecdUsuTPw>

January 7, 2019

School of Engineering and Technology, University of Washington - Tacoma

L1.9

C PROGRAMING IN TCSS 422

- Many OSES are coded primarily in C and Assembly Language
- Computerworld, 2017 Tech Forecast Survey

What legacy platforms do you still support and hire for?

None	65%
DB2	13%
C	10%
Cobol	9%
Assembly language	8%
Perl	5%
Delphi Object Pascal	3%
Fortran	3%
REXX	3%
Pascal	2%
Other	9%

January 7, 2019

School of Engineering and Technology, University of Washington - Tacoma

L1.10

C MENTORING

- <https://www.tacoma.uw.edu/institute-technology/student-support-workshops-mentors>
- School of Engineering and Technology Mentors
- Located in Science 106 / 108 Labs
- Monday – Thursday: ~9:30 am – 7:30 pm
- Friday: ~ 11-3pm
- Fall quarter hours to be posted

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.11

INSTRUCTOR HELP

- Office hours: to be announced - set by survey results
 - Also available by appointment
- End of class: good for quick questions, assignment Q&A
- It will be difficult to tutor all students individually on C
- Take ownership of your educational outcome
 - 10 weeks spent in TCSS 422 is very small relative to entire IT career
 - Make the most of this limited opportunity
 - Maximize your educational investment
 - *** Ask questions in class ***
 - Also questions after class, email, Canvas discussion boards
 - Seek help using UWT resources, the internet, YouTube videos (video.google.com) and online tutorials

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.12

CLASS PARTICIPATION

- Questions and discussion are strongly encouraged
 - Leverage your educational investment
 - All questions are encouraged! All are good!
 - This instructor does not mind repeat questions
 - better to be sure than sorry!
- Daily feedback surveys
 - How much is new vs. review?
 - Checking the pace...
 - What is unclear? It's helpful to know when topics are not clear
 - Use the survey to write questions and feedback that come to you during the lecture
- Poll-EV

School of Engineering and Technology, University of Washington - Tacoma

L2.17

OBJECTIVES

- **Chapter 2: Operating Systems – Three Easy Pieces**
 - Introduction to operating systems
 - Management of resources
 - Concepts of virtualization/abstraction
 - **THREE EASY PIECES:**
 - Virtualizing the CPU
 - Virtualizing Memory
 - Virtualizing I/O
 - Operating system design goals

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.18

OPERATING SYSTEMS

- Responsible for:
 - Making it easy to **run** programs
 - Allowing programs to **share** memory
 - Enabling programs to **interact** with devices

OS is in charge of making sure the system operates **correctly** and **efficiently**.

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.19

RESOURCE MANAGEMENT

- The OS is a resource manager
- Manages CPU, disk, network I/O
- Enables many programs to
 - **Share** the CPU
 - **Share** the underlying physical memory (RAM)
 - **Share** physical devices
 - Disks
 - Network Devices
 - ...

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.20

VIRTUALIZATION

- Operating systems present **physical resources** as **virtual representations** to the programs sharing them
 - Physical resources: CPU, disk, memory, ...
- The virtual form is “**abstract**”
- The OS presents an illusion that each user program runs in isolation on its own hardware
- This virtual form is general, powerful, and easy-to-use

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.21

ABSTRACTIONS

- What form of abstraction does the OS provide?
 - CPU
 - Process and/or thread
 - Memory
 - Address space
 - → large array of bytes
 - All programs see the same “size” of RAM
 - Disk
 - Files

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.22

WHY ABSTRACTION?

- Allow applications to reuse common facilities
- Make different devices look the same
 - Easier to write common code to use devices
 - Linux/Unix Block Devices
- Provide higher level abstractions
- More useful functionality

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.23

ABSTRACTION CHALLENGES

- What level of abstraction?
 - How much of the underlying hardware should be exposed?
 - What if **too much**?
 - What if **too little**?
- What are the correct abstractions?
 - Security concerns

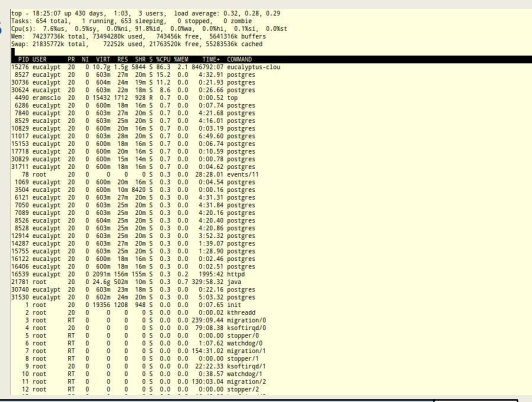

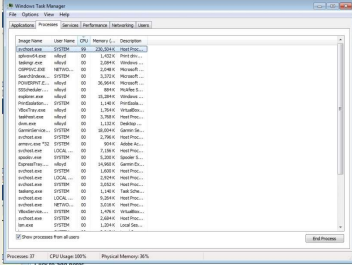

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.24

VIRTUALIZING THE CPU

- Each running program gets its own “virtual” representation of the CPU
- Many programs seem to run at once
- Linux: “top” command shows process list
- Windows: task manager

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.25

VIRTUALIZING THE CPU - 2

- Simple Looping C Program

```
1  #include <stdio.h>
2  #include <stdlib.h>
3  #include <sys/time.h>
4  #include <assert.h>
5  #include "common.h"
6
7  int
8  main(int argc, char *argv[])
9  {
10     if (argc != 2) {
11         fprintf(stderr, "usage: cpu <string>\n");
12         exit(1);
13     }
14     char *str = argv[1];
15     while (1) {
16         Spin(1); // Repeatedly checks the time and
17                 // returns once it has run for a second
18         printf("%s\n", str);
19     }
20     return 0;
}
```

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.26

VIRTUALIZING THE CPU - 3

```
prompt> gcc -o cpu cpu.c -Wall
prompt> ./cpu "A"
A
A
A
^C
prompt>
```

- Runs forever, must Ctrl-C to halt...

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.27

VIRTUALIZATION THE CPU - 4

```
prompt> ./cpu A & ; ./cpu B & ; ./cpu C & ; ./cpu D &
[1] 7353
[2] 7354
[3] 7355
[4] 7356
A
B
D
C
A
B
D
C
A
C
B
D
...
```

Even though we have only one processor, all four instances of our program seem to be running at the same time!

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.28

VIRTUALIZING MEMORY

- Computer memory is treated as a large array of bytes
- Programs store all data in this large array
- **Read memory (load)**
 - Specify an address to read data from
- **Write memory (store)**
 - Specify data to write to an address

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.29

VIRTUALIZING MEMORY - 2

- Program to read/write memory:

```
1  #include <unistd.h>
2  #include <stdio.h>
3  #include <stdlib.h>
4  #include "common.h"
5
6  int
7  main(int argc, char *argv[])
8  {
9      int *p = malloc(sizeof(int)); // a1: allocate some
                                   // memory
10     assert(p != NULL);
11     printf("(%d) address of p: %08x\n",
12           getpid(), (unsigned) p); // a2: print out the
                                   // address of the memory
13     *p = 0; // a3: put zero into the first slot of the memory
14     while (1) {
15         Spin(1);
16         *p = *p + 1;
17         printf("(%d) p: %d\n", getpid(), *p); // a4
18     }
19     return 0;
20 }
```

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.30

VIRTUALIZING MEMORY - 3

■ Output of mem.c

```
prompt> ./mem
(2134) memory address of p: 00200000
(2134) p: 1
(2134) p: 2
(2134) p: 3
(2134) p: 4
(2134) p: 5
^C
```

- int value stored at 00200000
- program increments int value

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.31

VIRTUALIZING MEMORY - 4

■ Multiple instances of mem.c

```
prompt> ./mem & ./mem &
[1] 24113
[2] 24114
(24113) memory address of p: 00200000
(24114) memory address of p: 00200000
(24113) p: 1
(24114) p: 1
(24114) p: 2
(24113) p: 2
(24113) p: 3
(24114) p: 3
...
```

- (int*)p receives the same memory location 00200000
- Why does modifying (int*)p in program #1 (PID=24113), not interfere with (int*)p in program #2 (PID=24114) ?
 - The OS has “virtualized” memory, and provides a “virtual” address

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.32

VIRTUAL MEMORY

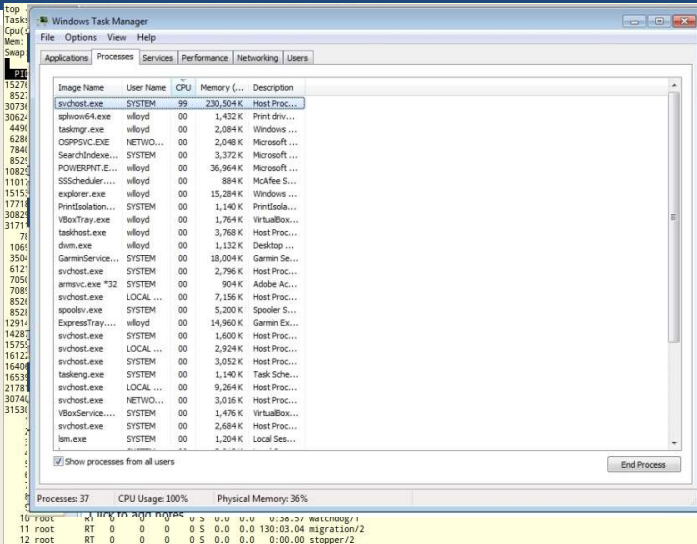

- Key take-aways:
- Each process (program) has its own *virtual address space*
- The OS maps virtual *address spaces* onto *physical memory*
- A memory reference from one process can not affect the address space of others.
 - *Isolation*
- Physical memory, a shared resource, is managed by the OS

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.33

CONCURRENCY

The screenshot shows the Windows Task Manager window with the 'Processes' tab selected. It lists various running processes including system services like 'svchost.exe' and user applications like 'explorer.exe'. At the bottom, it shows system performance metrics: CPU Usage: 100%, Physical Memory: 36%, and 37 processes running.

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.34

CONCURRENCY

- Linux: 654 tasks
- Windows: 37 processes
- The OS appears to run many programs at once, juggling them
- Modern multi-threaded programs feature concurrent threads and processes
- What is a key difference between a process and a thread?

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.35

CONCURRENCY - 2

```
1      #include <stdio.h>
2      #include <stdlib.h>
3      #include "common.h"
4
5      volatile int counter = 0;
6      int loops;
7
8      void ...
9
10
11
12
13 }
14
15 ...
```

Not the same as Java volatile:

Provides a compiler hint that an object may change value unexpectedly (in this case by a separate thread) so aggressive optimization must be avoided.

thread.c

Listing continues ...

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.36

CONCURRENCY - 3

```

16  int
17  main(int argc, char *argv[])
18  {
19      if (argc != 2) {
20          fprintf(stderr, "usage: threads <value>\n");
21          exit(1);
22      }
23      loops = atoi(argv[1]);
24      pthread_t p1, p2;
25      printf("Initial value : %d\n", counter);
26
27      Pthread_create(&p1, NULL, worker, NULL);
28      Pthread_create(&p2, NULL, worker, NULL);
29      Pthread_join(p1, NULL);
30      Pthread_join(p2, NULL);
31      printf("Final value : %d\n", counter);
32      return 0;
33  }

```

- Program creates two threads
- Check documentation: “man pthread_create”
- worker() method counts from 0 to argv[1] (loop)

January 7, 2019

TCCS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.37

Linux “man” page example

PTHREAD_CREATE(3) Linux Programmer's Manual PTHREAD_CREATE(3)

NAME

pthread_create - create a new thread

SYNOPSIS

```

#include <pthread.h>

int pthread_create(pthread_t *thread, const pthread_attr_t *attr,
                  void *(*start_routine) (void *), void *arg);

Compile and link with -pthread.

```

DESCRIPTION

The `pthread_create()` function starts a new thread in the calling process. The new thread starts execution by invoking `start_routine()`; `arg` is passed as the sole argument of `start_routine()`.

The new thread terminates in one of the following ways:

- * It calls `pthread_exit(3)`, specifying an exit status value that is available to another thread in the same process that calls `pthread_join(3)`.
- * It returns from `start_routine()`. This is equivalent to calling `pthread_exit(3)` with the value supplied in the `return` statement.
- * It is canceled (see `pthread_cancel(3)`).
- * Any of the threads in the process calls `exit(3)`, or the main thread performs a return from `main()`. This causes the termination of all threads in the process.

The `attr` argument points to a `pthread_attr_t` structure whose contents are used at thread creation time to determine attributes for the new thread; this structure is initialized using `pthread_attr_init(3)` and related functions. If `attr` is NULL, then the thread is created with default attributes.

January 7, 2019

TCCS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.38

CONCURRENCY - 4

- Command line parameter `argv[1]` provides loop length
- Defines number of times the shared counter is incremented
- Loops: 1000

```
prompt> gcc -o thread thread.c -Wall -pthread
prompt> ./thread 1000
Initial value : 0
Final value : 2000
```

- Loops 100000

```
prompt> ./thread 100000
Initial value : 0
Final value : 143012 // huh??
prompt> ./thread 100000
Initial value : 0
Final value : 137298 // what the??
```

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.39

CONCURRENCY - 5

- When loop value is large why do we not achieve 200000 ?
- C code is translated to (3) assembly code operations
 1. Load counter variable into register
 2. Increment it
 3. Store the register value back in memory
- These instructions happen concurrently and VERY FAST
- (P1 || P2) write incremented register values back to memory, While (P1 || P2) read same memory
- Memory access here is **unsynchronized (non-atomic)**
- *Some of the increments are lost*

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.40

PARALLEL PROGRAMMING

- To perform parallel work, a single process may:
 - A. Launch multiple threads to execute code in parallel while sharing global data in memory
 - B. Launch multiple processes to execute code in parallel without sharing global data in memory
 - C. Both A and B
 - D. None of the above

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L1.42

PERSISTENCE

- **DRAM: Dynamic Random Access Memory: DIMMs/SIMMs**
 - Stores data while power is present
 - When power is lost, data is lost (*volatile*)
- **Operating System helps “persist” data more permanently**
 - I/O device(s): hard disk drive (HDD), solid state drive (SSD)
 - File system(s): “catalog” data for storage and retrieval

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L2.43

PERSISTENCE - 2

```
1  #include <stdio.h>
2  #include <unistd.h>
3  #include <assert.h>
4  #include <fcntl.h>
5  #include <sys/types.h>
6
7  int
8  main(int argc, char *argv[])
9  {
10     int fd = open("/tmp/file", O_WRONLY | O_CREAT
11                  | O_TRUNC, S_IRWXU);
12     assert(fd > -1);
13     int rc = write(fd, "hello world\n", 13);
14     assert(rc == 13);
15     close(fd);
16     return 0;
17 }
```

- **open(), write(), close(): OS system calls for device I/O**
- **Note: man page for open(), write() require page number: “man 2 open”, “man 2 write”, “man close”**

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L2.44

PERSISTENCE - 3

- To write to disk, OS must:
 - Determine where on disk data should reside
 - Perform sys calls to perform I/O:
 - Read/write to file system (*inode record*)
 - Read/write data to file
- Provide fault tolerance for system crashes
 - Journaling: Record disk operations in a journal for replay
 - Copy-on-write - replicating shared data - see ZFS
 - Carefully order writes on disk

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L2.45

SUMMARY: OPERATING SYSTEM DESIGN GOALS

- **ABSTRACTING THE HARDWARE**
 - Makes programming code easier to write
 - Automate sharing resources – save programmer burden
- **PROVIDE HIGH PERFORMANCE**
 - Minimize overhead from OS abstraction
(Virtualization of CPU, RAM, I/O)
 - Share resources fairly
 - Attempt to tradeoff performance vs. fairness → consider priority
- **PROVIDE ISOLATION**
 - User programs can't interfere with each other's virtual machines, the underlying OS, or the sharing of resources

January 7, 2019

TCSS422: Operating Systems [Winter 2019]
School of Engineering and Technology, University of Washington - Tacoma

L2.46

SUMMARY: OPERATING SYSTEM DESIGN GOALS - 2

- **RELIABILITY**
 - OS must not crash, 24/7 Up-time
 - Poor user programs must not bring down the system:

Blue Screen

- Other Issues:
 - Energy-efficiency
 - Security (of data)
 - Cloud: Virtual Machines

January 7, 2019	TCSS422: Operating Systems [Winter 2019] School of Engineering and Technology, University of Washington - Tacoma	L2.47
