

TCSS 562: SOFTWARE ENGINEERING FOR CLOUD COMPUTING

AWS Overview and Demo, Cloud Enabling Technology

Wes J. Lloyd
School of Engineering and Technology
University of Washington - Tacoma

1

OFFICE HOURS – FALL 2023

- **Tuesdays:**
 - 2:30 to 3:30 pm - CP 229
- **Fridays**
 - 11:00 am to 12:00 pm – ONLINE via Zoom
- **Or email for appointment**

> *Office Hours set based on Student Demographics survey feedback*

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.2
------------------	---	-------

2

OBJECTIVES - 10/31

- **Questions from 10/26**
- Tutorials Questions
- Tutorial 6 - Serverless Databases
- AWS Overview and demo
- Tutorial 4 Demo
- Ch. 5: Cloud Enabling Technology

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.3

TCSS 562 - Online Daily Feedback Survey - 10/5
Started: Oct 7 at 1:13am
Quiz Instructions

Question 1 0.5 pts

On a scale of 1 to 10, please classify your perspective on material covered in today's class:

1 2 3 4 5 6 7 8 9 10
Mostly Review To Me Equal New and Review Mostly New to Me

Question 2 0.5 pts

Please rate the pace of today's class:

1 2 3 4 5 6 7 8 9 10
Slow Just Right Fast

October 31, 2023 TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L10.5

5

MATERIAL / PACE

- Please classify your perspective on material covered in today's class (**55** respondents):
 - 1-mostly review, 5-equal new/review, 10-mostly new
 - **Average - 6.11** (↓ - *previous 6.30*)
- Please rate the pace of today's class:
 - 1-slow, 5-just right, 10-fast
 - **Average - 5.31** (↓ - *previous 5.70*)
- **Response rates:**
 - TCSS 462: 32/44 - 72.73%
 - TCSS 562: 23/25 - 92.0%

October 31, 2023 TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L10.6

6

FEEDBACK FROM 10/26

- **Can AWS Lightsail be used as a comparable cloud platform in our project? It appears to be a more affordable and easier-to-configure solution compared to ec2**
- AWS Lightsail repackages ec2 with an easier-to-use (?) UI, but the VM types offered are extremely limited compared to ec2
- A stack overflow article suggests the VMs are based on the “t” series of ec2 instances which feature CPU timeshare quotas
- “t” series instances are good for development, and low-cost web hosting - where user demand is very low
- Lightsail is an Infrastructure-as-a-Service (IaaS) cloud offering, and is not serverless
 - Most TCSS 462/562 term projects only use IaaS for the client

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.7

7

FEEDBACK - 2

- **How does composition impact the number of function invocations and memory utilization?**
- This question is an example of a question which can be investigated if the term project conducts a case study on function/service composition

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.8

8

FEEDBACK - 3

- **What is the difference between on-premise server and private cloud?**
- A private cloud is typically on-premise but it doesn't have to be physically co-located in the office
 - For example – company with multiple offices nationwide
- A private cloud is typically only accessible inside a company's firewall (i.e. hosted on a company's intranet) where a VPN is required for access

October 31, 2023

AWS CLOUD CREDITS UPDATE

- AWS CLOUD CREDITS ARE NOW AVAILABLE FOR TCSS 462/562
- Credits provided on request with expiry of Sept 30, 2024
- Credit codes must be securely exchanged
- Request codes by sending an email with the subject “AWS CREDIT REQUEST” to wllloyd@uw.edu
- Codes can also be obtained in person (or zoom), in the class, during the breaks, after class, during office hours, by appt
 - 57 credit requests fulfilled as of Oct 30 @ 11:59p
- Codes not provided using discord

October 31, 2023	TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.11
------------------	--	--------

11

OBJECTIVES – 10/31

- Questions from 10/26
- **Tutorials Questions**
- Tutorial 6 - Serverless Databases
- AWS Overview and demo
- Tutorial 4 Demo
- Ch. 5: Cloud Enabling Technology

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.12
------------------	---	--------

12

TUTORIAL 0

- Getting Started with AWS
- http://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_0.pdf
- Create an AWS account
- Create account credentials for working with the CLI
- Install awsconfig package
- Setup awsconfig for working with the AWS CLI

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.13
------------------	---	--------

13

TUTORIAL 3 – DUE OCT 30

- Best Practices for Working with Virtual Machines on Amazon EC2
- http://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_3.pdf
- Creating a spot VM
- Creating an image from a running VM
- Persistent spot request
- Stopping (pausing) VMs
- EBS volume types
- Ephemeral disks (local disks)
- Mounting and formatting a disk
- Disk performance testing with Bonnie++
- Cost Saving Best Practices

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.14
------------------	---	--------

14

TUTORIAL 4 – DUE NOV 6

- Introduction to AWS Lambda with the Serverless Application Analytics Framework (SAAF)
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_4.pdf (link to be posted)
- Obtaining a Java development environment
- Introduction to Maven build files for Java
- Create and Deploy “hello” Java AWS Lambda Function
 - Creation of API Gateway REST endpoint
- Sequential testing of “hello” AWS Lambda Function
 - API Gateway endpoint
 - AWS CLI Function invocation
- Observing SAAF profiling output
- Parallel testing of “hello” AWS Lambda Function with faas_runner
- Performance analysis using faas_runner reports
- Two function pipeline development task

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.15
------------------	---	--------

15

TUTORIAL 5 – DUE NOV 13

- Introduction to Lambda II: Working with Files in S3 and CloudWatch Events
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_5.pdf
- Customize the Request object (add getters/setters)
 - Why do this instead of HashMap ?
- Import dependencies (jar files) into project for AWS S3
- Create an S3 Bucket
- Give your Lambda function(s) permission to work with S3
- Write to the CloudWatch logs
- Use of CloudTrail to generate S3 events
- Creating CloudWatch rule to capture events from CloudTrail
- Have the CloudWatch rule trigger a target Lambda function with a static JSON input object (hard-coded filename)
- **Optional:** for the S3 PutObject event, dynamically extract the name of the file put to the S3 bucket for processing

------------------	---	--------

20

LIST OF TOPICS

- AWS Management Console
- Elastic Compute Cloud (EC2)
- Instance Storage: Virtual Disks on VMs
- Elastic Block Store: Virtual Disks on VMs
- Elastic File System (EFS)
- Amazon Machine Images (AMIs)
- EC2 Paravirtualization
- EC2 Full Virtualization (hvm)
- EC2 Virtualization Evolution
- (VM) Instance Actions
- EC2 Networking
- EC2 Instance Metadata Service
- Simple Storage Service (S3)
- AWS Command Line Interface (CLI)
- Legacy / Service Specific CLIs
- AMI Tools
- Signing Certificates
- Backing up live disks
- Cost Savings Measures
- Disk images and S3

21

AWS MANAGEMENT CONSOLE

The screenshot shows the AWS Management Console interface. On the left is a 'History' sidebar with categories like EC2, S3, Billing, IAM, and VPC. The main area displays a grid of service tiles, each with an icon and a list of services. Categories include Compute (EC2, EC2 Container Service, Lightsail, Elastic Beanstalk, Lambda, Batch), Storage (S3, EFS, Glacier, Storage Gateway), Database (RDS, DynamoDB, ElastiCache, Redshift), Networking & Content Delivery (VPC), Developer Tools (CodeCommit, CodeBuild, CodeDeploy, CodePipeline, X-Ray), Management Tools (CloudWatch, CloudFormation, CloudTrail, Config, OpsWorks, Service Catalog, Trusted Advisor, Managed Services), Security, Identity & Compliance (IAM, Inspector, Certificate Manager, Directory Service, WAF & Shield), Analytics (Athena, EMR, CloudSearch, Elasticsearch Service, Kinesis, Data Pipeline, QuickSight), Artificial Intelligence (Lex, Polly, Rekognition, Machine Learning), Internet of Things (AWS IoT), Contact Center (Amazon Connect), Application Services (Step Functions, SWF, API Gateway, Elastic Transcoder), Messaging (Simple Queue Service, Simple Notification Service, SES), Business Productivity (WorkDocs, WorkMail, Amazon Chime), and Desktop & App Streaming (WorkSpaces, AppStream 2.0).

October 31, 2023 TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma L10.22

22

AWS EC2

- **Elastic Compute Cloud**
- Instance types: <https://ec2instances.info>
 - **On demand Instance** – full price
 - **Reserved Instance** – contract based where customer guarantees VM rental for a fixed period of time (e.g. 1 year, 3 years, etc.)
Deeper discounts with longer term commitments
 - **Spot Instance** – portion of cloud capacity reserved for low cost instances, when demand exceeds supply instances are randomly terminated with 2 minute warning
 - Users can make diverse VM requests using different types, zones, regions, etc. to minimize instance terminations
 - Developers can design for failure because often only 1 or 2 VMs in a cluster fail at any given time. They then need to be replaced.
 - **Dedicated host** – reserved private HW (server)
 - Instance families -
General, compute-optimized, memory-optimized, GPU, etc.

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.23

23

AWS EC2 - 2

- **Storage types**
 - **Instance storage - ephemeral storage**
 - Temporary disk volumes stored on disks local to the VM
 - Evolution: physical hard disk drives (HDDs)
 - Solid state drives (SSDs)
 - Non-volatile memory express (NVMe) drives (closer to DRAM speed)
 - **EBS - Elastic block store**
 - Remotely hosted disk volumes
 - **EFS - Elastic file system**
 - Shared file system based on network file system
 - VMs, Lambdas, Containers mount/interact with shared file system
 - Somewhat expensive

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.24

24

INSTANCE STORAGE

- Also called ephemeral storage
- Persisted using images saved to S3 (simple storage service)
 - ~2.3¢ per GB/month on S3
 - 5GB of free tier storage space on S3
- Requires “burning” an image
- Multi-step process:
 - Create image files
 - Upload chunks to S3
 - Register image
- Launching a VM
 - Requires downloading image components from S3, reassembling them... is potentially slow
- VMs with instance store backed root volumes not pause-able
- Historically root volume limited to 10-GB max- **faster imaging...**

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.25
------------------	---	--------

25

ELASTIC BLOCK STORE

- EBS provides 1 drive to 1 virtual machine (**1 : 1**) (**not shared**)
- EBS cost model is different than instance storage (uses S3)
 - ~10¢ per GB/month for General Purpose Storage (GP2)
 - ~8¢ per GB/month for General Purpose Storage (GP3)
 - 30GB of free tier storage space
- EBS provides “live” mountable volumes
 - Listed under volumes
 - **Data volumes**: can be mounted/unmounted to any VM, dynamically at any time
 - **Root volumes**: hosts OS files and acts as a boot device for VM
 - In Linux drives are linked to a mount point “directory”
- Snapshots back up EBS volume data to S3
 - Enables replication (required for horizontal scaling)
 - EBS volumes not actively used should be snapshotted, and deleted to save EBS costs...

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.26
------------------	---	--------

26

EBS VOLUME TYPES - 2

- **Metric: I/O Operations per Second (IOPS)**
- **General Purpose 2 (GP2)**
 - 3 IOPS per GB, min 100 IOPS (<34GB), max of 16,000 IOPS
 - 250MB/sec throughput per volume
- **General Purpose 3 (GP3 - new Dec 2020)**
 - Max 16,000 IOPS, Default 3,000 IOPS
 - GP2 requires creating a 1TB volume to obtain 3,000 IOPS
 - GP3 all volumes start at 3000 IOPS and 125 MB/s throughput
 - 1000 additional IOPS beyond 3000 is \$5/month up to 16000 IOPS
 - 125 MB/s additional throughput is \$5/month up to 1000 MB/s throughput

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.27

27

EBS VOLUME TYPES - 3

- **Provisioned IOPS (IO1)**
 - Legacy, associated with GP2
 - Allows user to create custom disk volumes where they pay for a specified IOPS and throughput
 - 32,000 IOPS, and 500 MB/sec throughput per volume MAX
- **Throughput Optimized HDD (ST1)**
 - Up to 500 MB/sec throughput
 - 4.5 ¢ per GB/month
- **Cold HDD (SC1)**
 - Up to 250 MB/sec throughput
 - 2.5 ¢ per GB/month
- **Magnetic**
 - Up to 90 MB/sec throughput per volume
 - 5 ¢ per GB/month

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.28

28

ELASTIC FILE SYSTEM (EFS)

- EFS provides 1 volume to many client (**1 : n**) **shared storage**
- Network file system (based on NFSv4 protocol)
- Shared file system for EC2, Fargate/ECS, Lambda
- Enables mounting (sharing) the same disk “volume” for R/W access across multiple instances at the same time
- Different performance and limitations vs. EBS/Instance store

- Implementation uses abstracted EC2 instances
- ~ 30 ¢ per GB/month storage – **default burstable throughput**
- **Throughput modes:**
- Can modify modes only once every 24 hours

- **Burstable Throughput Model:**
 - Baseline – 50kb/sec per GB
 - Burst – 100MB/sec per GB (for volumes sized 10GB to 1024 GB)
 - Credits - .72 minutes/day per GB

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.29
------------------	---	--------

29

ELASTIC FILE SYSTEM (EFS) - 2

- **Burstable Throughput Rates**
 - Throughput rates: baseline vs burst
 - Credit model for bursting: maximum burst per day

Information subject to revision

File System Size (GiB)	Baseline Aggregate Throughput (MiB/s)	Burst Aggregate Throughput (MiB/s)	Maximum Burst Duration (Min/Day)	% of Time File System Can Burst (Per Day)
10	0.5	100	7.2	0.5%
256	12.5	100	180	12.5%
512	25.0	100	360	25.0%
1024	50.0	100	720	50.0%
1536	75.0	150	720	50.0%
2048	100.0	200	720	50.0%
3072	150.0	300	720	50.0%
4096	200.0	400	720	50.0%

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.30
------------------	---	--------

30

ELASTIC FILE SYSTEM (EFS) - 3

Information subject to revision

- **Throughput Models**
- **Provisioned Throughput Model**
- **For applications with:**
 - high performance requirements, but low storage requirements
- **Get high levels of performance w/o overprovisioning capacity**
- **\$6 MB/s-Month (Virginia Region)**
 - Default is 50kb/sec for 1 GB, .05 MB/s = 30 ¢ per GB/month
- **If file system metered size has higher baseline rate based on size, file system follows default Amazon EFS Bursting Throughput model**
 - No charges for Provisioned Throughput below file system's entitlement in Bursting Throughput mode
 - Throughput entitlement = 50kb/sec per GB

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma

L10.31

31

ELASTIC FILE SYSTEM (EFS) - 4

Performance Comparison, Amazon EFS and Amazon EBS

Information subject to revision

	Amazon EFS	Amazon EBS Provisioned IOPS
Per-operation latency	Low, consistent latency.	Lowest, consistent latency.
Throughput scale	10+ GB per second.	Up to 2 GB per second.

Storage Characteristics Comparison, Amazon EFS and Amazon EBS

	Amazon EFS	Amazon EBS Provisioned IOPS
Availability and durability	Data is stored redundantly across multiple AZs.	Data is stored redundantly in a single AZ.
Access	Up to thousands of Amazon EC2 instances, from multiple AZs, can connect concurrently to a file system.	A single Amazon EC2 instance in a single AZ can connect to a file system.
Use cases	Big data and analytics, media processing workflows, content management, web serving, and home directories.	Boot volumes, transactional and NoSQL databases, data warehousing, and ETL.

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma

L10.32

32

AMAZON MACHINE IMAGES

- AMIs
- Unique for the operating system (root device image)
- Two types
 - Instance store
 - Elastic block store (EBS)
- Deleting requires multiple steps
 - Deregister AMI
 - Delete associated data - (*files in S3*)
- Forgetting both steps leads to costly “orphaned” data
 - No way to instantiate a VM from deregistered AMIs
 - Data still in S3 resulting in charges

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.33

33

EC2 VIRTUALIZATION - PARAVIRTUAL

- 1st, 2nd, 3rd, 4th generation → XEN-based
- 5th generation instances → AWS Nitro virtualization

- XEN - two virtualization modes
- XEN Paravirtualization “paravirtual”
 - 10GB Amazon Machine Image – base image size limit
 - Addressed poor performance of old XEN HVM mode
 - I/O performed using special XEN kernel with XEN paravirtual mode optimizations for better performance
 - Requires OS to have an available paravirtual kernel
 - PV VMs: will use common **AKI** files on AWS – **Amazon kernel Image(s)**
 - *Look for common identifiers*

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.34

34

EC2 VIRTUALIZATION - HVM

- XEN HVM mode
 - Full virtualization – no special OS kernel required
 - Computer entirely simulated
 - MS Windows runs in “hvm” mode
 - Allows work around: 10GB instance store root volume limit
 - Kernel is on the root volume (under /boot)
 - No AKIs (kernel images)
 - Commonly used today (*EBS-backed instances*)

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.35

35

EC2 VIRTUALIZATION - NITRO

- Nitro based on Kernel-based-virtual-machines
 - Stripped down version of Linux KVM hypervisor
 - Uses KVM core kernel module
 - I/O access has a direct path to the device
- Goal: provide indistinguishable performance from bare metal

October 31, 2023

EC2 INSTANCE: NETWORK ACCESS

- Public IP address
- Elastic IPs
 - Costs: in-use FREE, not in-use ~12 ¢/day
 - Not in-use (e.g. “paused” EBS-backed instances)
- Security groups
 - E.g. firewall
- Identity access management (IAM)
 - AWS accounts, groups
- VPC / Subnet / Internet Gateway / Router
- NAT-Gateway

INSPECTING INSTANCE INFORMATION

- EC2 VMs run a local metadata service
- Can query instance metadata to self discover cloud configuration attributes

- Find your instance ID:

```
curl http://169.254.169.254/  
curl http://169.254.169.254/latest/  
curl http://169.254.169.254/latest/meta-data/  
curl http://169.254.169.254/latest/meta-data/instance-id  
; echo
```

- `ec2-get-info` command
- Python API that provides easy/formatted access to metadata

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.42
------------------	---	--------

42

SIMPLE STORAGE SERVICE (S3)

- Key-value blob storage
- What is the difference vs. key-value stores (NoSQL DB)?
- Can mount an S3 bucket as a volume in Linux
 - Supports common file-system operations
- Provides eventual consistency
- Can store Lambda function state for life of container.

COST SAVINGS MEASURES

- ***From Tutorial 3:***
- **#1: ALWAYS USE SPOT INSTANCES FOR COURSE/RESEARCH RELATED PROJECTS**
- **#2: NEVER LEAVE AN EBS VOLUME IN YOUR ACCOUNT THAT IS NOT ATTACHED TO A RUNNING VM**
- **#3: BE CAREFUL USING PERSISTENT REQUESTS FOR SPOT INSTANCES**
- **#4: TO SAVE/PERSIST DATA, USE EBS SNAPSHOTS AND THEN**
- **#5: DELETE EBS VOLUMES FOR TERMINATED EC2 INSTANCES.**
- **#6: UNUSED SNAPSHOTS AND UNUSED EBS VOLUMES SHOULD BE PROMPTLY DELETED !!**
- **#7: USE PERSISTENT SPOT REQUESTS AND THE “STOP” FEATURE TO PAUSE VMS DURING SHORT BREAKS**

CLOUD ENABLING TECHNOLOGY

- *Adapted from Ch. 5 from Cloud Computing Concepts, Technology & Architecture*
- **Broadband networks and internet architecture**
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.63
------------------	---	--------

63

1. BROADBAND NETWORKS AND INTERNET ARCHITECTURE

- Clouds must be connected to a network
- Inter-networking: Users' network must connect to cloud's network
- Public cloud computing relies heavily on the **internet**

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.64
------------------	---	--------

64

PRIVATE CLOUD NETWORKING

- For institutions with in-house private clouds

The diagram illustrates a private cloud network. On the left, a cloud contains three server racks and three desktop computers labeled 'in-office users'. A blue router connects these to a vertical firewall. To the right of the firewall is a 'corporate Internet connection' represented by a globe and two red routers. Further right, another red router connects to 'remote users', which includes a person at a computer and a person with a mobile phone. Text next to the remote users says 'users accessing cloud services remotely'.

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.65
------------------	---	--------

65

PUBLIC CLOUD NETWORKING

- Resources can be extended by adding public cloud
- Places further dependency on the internet to provide connectivity

The diagram shows a hybrid cloud setup. At the top left, a 'private cloud network' contains server racks and desktops labeled 'in-office users', connected to a blue router and a firewall. To the right is a 'corporate Internet connection' with a globe and red routers. Further right, 'remote users' (a person at a computer and a person with a mobile phone) are shown. Text next to them says 'users accessing cloud services remotely'. Below this, a 'cloud provider network' is shown as a cloud containing two rows of server racks. It is connected to a 'cloud provider Internet connection' with a globe and red routers. Lines connect the corporate and cloud provider Internet connections to the remote users.

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.66
------------------	---	--------

66

INTERNETWORKING KEY POINTS

- Cloud consumers and providers typically communicate via the internet
- Decentralized provisioning and management model is not controlled by the cloud consumers or providers
- Inter-networking (internet) relies on connectionless packet switching and route-based interconnectivity
- Routers and switches support communication
- Network bandwidth and latency influence QoS, which is heavily impacted by network congestion

L10.68

68

2. DATA CENTER TECHNOLOGY

- Grouping servers together (clusters):
- Enables power sharing
- Higher efficiency in shared IT resource usage (less duplication of effort)
- Improved accessibility and organization

- Key components:
 - Virtualized and physical server resources
 - Standardized, modular hardware
 - Automation support: enable server provisioning, configuration, patching, monitoring without supervision... **tool/API support is desirable**

70

DATA CENTER TECHNOLOGY – KEY COMPONENTS

- Remote operation / management
- **High availability support:** **redundant everything**
Includes: power supplies, cabling, environmental control systems, communication links, duplicate warm replica HW
- **Secure design:** physical and logical access control
- **Servers:** rackmount, etc.
- **Storage:** hard disk arrays (RAID)
- storage area network (SAN): disk array w/ multiple servers (individual nodes w/ disks) and a dedicated network
- network attached storage (NAS): inexpensive single node with collection of disks, provides shared filesystems, for NFS, etc.
- **Network hardware:** backbone routers (WAN to LAN connectivity), firewalls, VPN gateways, managed switches/routers

72

3. VIRTUALIZATION TECHNOLOGY

- Convert a physical IT resource into a virtual IT resource
- Servers, storage, network, power (virtual UPSs)
- Virtualization supports:
 - Hardware independence
 - Server consolidation
 - Resource replication
 - Resource pooling
 - Elastic scalability
- Virtual servers
 - Operating-system based virtualization
 - Hardware-based virtualization

School of Engineering and Technology, University of Washington - Tacoma

L10.74

74

KEY VIRTUALIZATION TRADEOFF

■ Tradeoff space:

What is the “right” level of abstraction in the cloud for sharing resources with users?

Degree of Hardware Abstraction

Abstraction Concerns:

- Overhead
- Performance
- Isolation
- Security

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.75
------------------	---	--------

75

ABSTRACTION CONCERNS

- **Overhead with too many instances w/ heavy abstractions**
 - Too many instances using a heavy abstraction can lead to hidden resource utilization and waste
 - Example: Dedicated server with 48 VMs each with separate instance of Ubuntu Linux
 - Idle VMs can reduce performance of co-resident jobs/tasks
- **“Virtualization” Overhead**
 - Cost of virtualization an OS instance
 - Overhead has dropped from ~100% to ~1% over last decade
- **Performance**
 - Impacted by weight of abstraction and virtualization overhead

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.76
------------------	---	--------

76

ABSTRACTION CONCERNS - 2

■ Isolation

■ From others:

What user A does should not impact user B in any noticeable way

■ Security

■ User A and user B's data should be always separate

■ User A's actions are not perceivable by User B

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.77

77

TYPES OF ABSTRACTION IN THE CLOUD

■ **Virtual Machines** – original IaaS cloud abstraction

■ **OS and Application Containers** – seen with CaaS

■ **OS Container** – replacement for VM, mimics full OS instance, heavier

■ OS containers run 100s of processes just like a VM

■ **App Container** – Docker: packages dependencies to easily transport and run an application anywhere

■ Application containers run only a few processes

■ **Micro VMs** – FaaS / CaaS

■ Lighter weight alternative to full VM (KVM, XEN, VirtualBox)

■ Firecracker

■ **Unikernel Operating Systems** – research mostly

■ Single process, multi-thread operating system

■ Designed for cloud, objective to reduce overhead of running too many OS instances

October 31, 2023

School of Engineering and Technology, University of Washington - Tacoma

L10.78

78

VIRTUAL MACHINES

- **Type 1 hypervisor**
 - Typically involves a special virtualization kernel that runs directly on the system to share the underlying machine with many guest VMs
 - Paravirtualization introduced to directly share system resources with guests bypassing full emulation
 - VM becomes equal participant in sharing the network card for example
- **Type 2 hypervisor**
 - Typically involves the **Full Virtualization** of the guest, where everything is simulated/emulated
- **Hardware level support** (i.e. features introduced on CPUs) have made virtualization faster in all respects shrinking virtualization overhead

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.79
------------------	---	--------

79

TYPE 1 HYPERVISOR

The diagram illustrates the architecture of a Type 1 Hypervisor. At the top, three orange rounded rectangles represent individual VMs, each containing the text 'VM (guest operating system and application software)'. These VMs sit on a larger orange rounded rectangle labeled 'Virtual Machine Management Hypervisor'. This hypervisor layer sits on a final orange rounded rectangle at the bottom labeled 'Hardware (virtualization host)'.

- **Host OS and VMs run atop the hypervisor**
- **The boot OS is the hypervisor kernel**
- **Xen dom0**

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.80
------------------	---	--------

80

TYPE 1 HYPERVISOR

- Acts as a control program
- Miniature OS kernel that manages VMs
- Boots and runs on bare metal
- Also known as Virtual Machine Monitor (VMM)
- **Paravirtualization:** Kernel includes I/O drivers
- VM guest Oses must use special kernel to interoperate
- Paravirtualization provides hooks to the guest VMs
- Kernel traps instructions (i.e. device I/O) to implement sharing & multiplexing
- User mode instructions run directly on the CPU
- Objective: minimize virtualization overhead
- Classic example is XEN (dom0 kernel)

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.81
------------------	---	--------

81

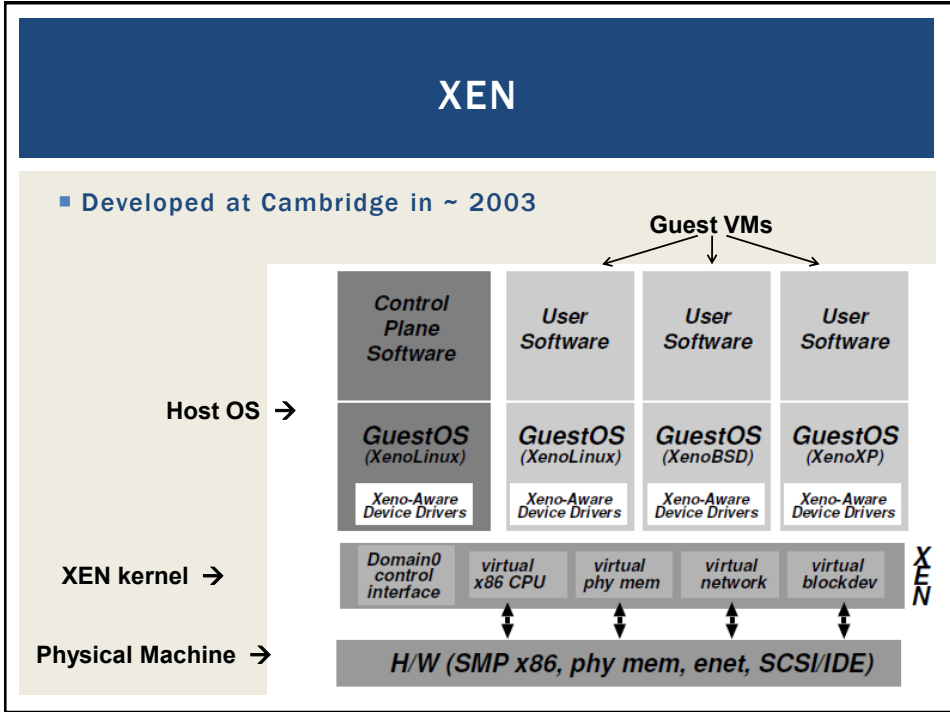

COMMON VMMS: PARAVIRTUALIZATION

- TYPE 1 Hypervisor
- XEN
- Citrix Xen-server (a commercial version of XEN)
- VMWare ESXi
- KVM (virtualization support in kernel)

- Paravirtual I/O drivers introduced
 - XEN
 - KVM
 - Virtualbox

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.82
------------------	---	--------

82

83

XEN - 2

- VMs managed as “domains”
- Domain 0 is the hypervisor domain
 - Host OS is installed to run on bare-metal, but doesn't directly facilitate virtualization (*unlike KVM*)
- Domains 1..n are guests (VMs) – not bare-metal

```
xentop - 17:53:48 Xen 3.1.2-398.e15

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.84
------------------	---	--------

84

XEN - 3

- Physical machine boots special XEN kernel
- Kernel provides paravirtual API to manage CPU & device multiplexing
- Guests require modified XEN-aware kernels
- Xen supports full-virtualization for unmodified OS guests in hvm mode
- Amazon EC2 largely based on modified version of XEN hypervisor (EC2 gens 1-4)
- XEN provides its own CPU schedulers, I/O scheduling

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.85
------------------	---	--------

85

TYPE 2 HYPERVISOR

- Adds additional layer

The diagram illustrates the architecture of a Type 2 Hypervisor. It consists of several layers from top to bottom: three Virtual Machines (VMs), each containing a guest operating system and application software; a Virtual Machine Management layer; an Operating System (host OS); and the Hardware (virtualization host).

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.86
------------------	---	--------

86

TYPE 2 HYPERVISOR

- **Problem: Original x86 CPUs could not trap special instructions**
- Instructions not specially marked
- **Solution: Use Full Virtualization**
- Trap ALL instructions
- “Fully” simulate entire computer
- Tradeoff: Higher Overhead
- **Benefit: Can virtualize any operating system without modification**

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.87
------------------	---	--------

87

CHECK FOR VIRTUALIZATION SUPPORT

- See:
<https://cyberciti.biz/faq/linux-xen-vmware-kvm-intel-vt-amd-v-support>
- # check for Intel VT CPU virtualization extensions on Linux
`grep -color vmx /proc/cpuinfo`
- # check for AMD V CPU virtualization extensions on Linux
`grep -color svm /proc/cpuinfo`
- Also see 'lscpu' → “Virtualization:”
- Other Intel CPU features that help virtualization:
`ept vpid tpr_shadow flexpriority vnmi`

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.88
------------------	---	--------

88

KERNEL BASED VIRTUAL MACHINES (KVM)

- x86 HW notoriously difficult to virtualize
- Extensions added to 64-bit Intel/AMD CPUs
 - Provides hardware assisted virtualization
 - New “guest” operating mode
 - Hardware state switch
 - Exit reason reporting
 - Intel/AMD implementations different
 - Linux uses vendor specific kernel modules

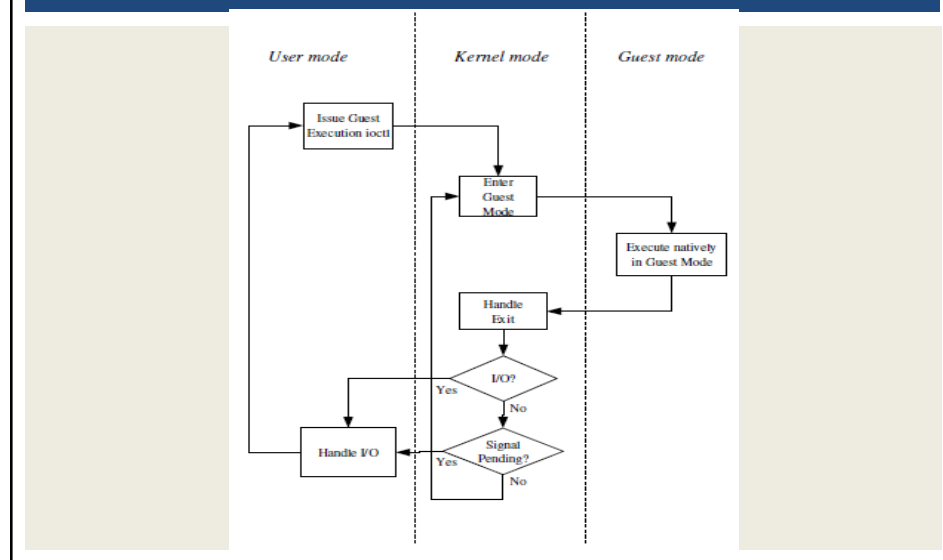

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.89

89

KVM - 2

90

KVM – 3

- KVM has /dev/kvm device file node
 - Linux character device, with operations:
 - Create new VM
 - Allocate memory to VM
 - Read/write virtual CPU registers
 - Inject interrupts into vCPUs
 - Running vCPUs
- VMs run as Linux processes
 - Scheduled by host Linux OS
 - Can be pinned to specific cores with “taskset”

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.91

91

KVM PARAVIRTUALIZED I/O

- KVM – Virtio
 - Custom Linux based paravirtual device drivers
 - Supersedes QEMU hardware emulation (full virt.)
 - Based on XEN paravirtualized I/O
 - Custom block device driver provides paravirtual device emulation
 - Virtual bus (memory ring buffer)
 - Requires hypercall facility
 - Direct access to memory

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.92

92

KVM DIFFERENCES FROM XEN

- KVM requires CPU VMX support
 - Virtualization management extensions
- KVM can virtualize any OS without special kernels
 - Less invasive
- KVM was originally separate from the Linux kernel, but then integrated
- KVM is type 1 hypervisor because the machine boots Linux which has integrated support for virtualization
- Different than XEN because XEN kernel alone is not a full-fledged OS

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.93

93

KVM ENHANCEMENTS

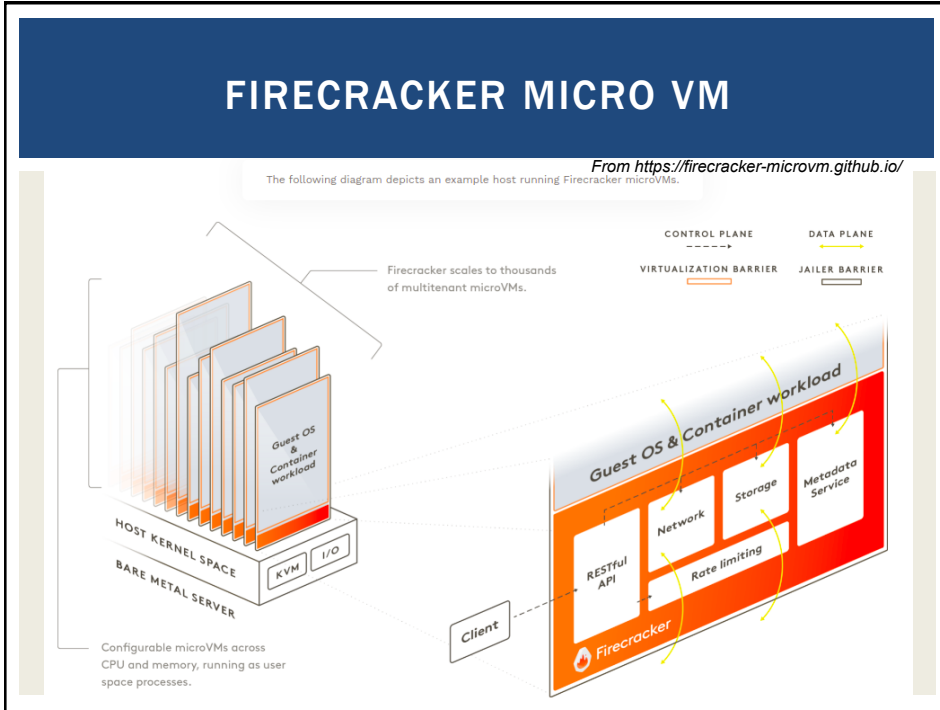

- Paravirtualized device drivers
 - Virtio
- Guest Symmetric Multiprocessor (SMP) support
 - Leverages multiple on-board CPUs
 - Supported as of Linux 2.6.23
- VM Live Migration
- Linux scheduler integration
 - Optimize scheduler with knowledge that KVM processes are virtual machines

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.94

94

95

FIRECRACKER MICRO VM

- Provides a virtual machine monitor (VMM) (i.e. hypervisor) using **KVM** to create and manage microVMs
- Has a minimalist design with goals to improve security, decreases the startup time, and increases hardware utilization
- Excludes unnecessary devices and guest functionality to reduce memory footprint and attack surface area of each microVM
- Supports boot time of **<125ms**, **<5 MiB** memory footprint
- Can run **100s** of microVMs on a host, launching up to **150/sec**
- Is available on **64-bit Intel, AMD, and Arm CPUs**
- Used to host **AWS Lambda** and **AWS Fargate**
- Has been open sourced under the **Apache 2.0** license

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.96
------------------	---	--------

96

FIRECRACKER - 2

- **Minimalistic**
- MicroVMs run as separate processes on the host
- Only 5 emulated devices are available: virtio-net, virtio-block, virtio-vsock, serial console, and a minimal keyboard controller used only to stop the microVM
- Rate limiters can be created and configured to provision resources to support bursts or specific bandwidth/operation limitations
- **Configuration**
- A RESTful API enables common actions such as configuring the number of vCPUs or launching microVMs
- A metadata service between the host and guest provides configuration information

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.97

97

FIRECRACKER - 2

- **Security**
- Runs in user space (*not the root user*) on top of the Linux Kernel-based Virtual Machine (KVM) hypervisor to create microVMs
- Lambda functions, Fargate containers, or container groups can be encapsulated using Firecracker through KVM, enabling workloads from different customers to run on the same machine, without sacrificing security or efficiency
- MicroVMs are further isolated with common Linux user-space security barriers using a companion program called “jailer” which provides a second line of defense if KVM is compromised

School of Engineering and Technology, University of Washington - Tacoma

L10.98

98

UNIKERNELS

- Lightweight alternative to containers and VMs
 - Custom Cloud Operating System
 - Single process, multiple threads, runs one program
 - Launch separately atop of hypervisor (XEN/KVM)
 - Reduce overhead, duplication of heavy weight OS

- OSv is most well known unikernel
- Several others exist has research projects
- More information at: <http://unikernel.org/>
- Google Trends OSv →

99

VIRTUALIZATION MANAGEMENT

- Virtual infrastructure management (VIM) tools
- Tools that manage pools of virtual machines, resources, etc.
- Private cloud software systems can be considered as a VIM

- Considerations:
 - Performance overhead
 - Paravirtualization: custom OS kernels, I/O passed directly to HW w/ special drivers
 - Hardware compatibility for virtualization
 - Portability: virtual resources tend to be difficult to migrate cross-clouds

October 31, 2023 TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L10.100

100

VIRTUAL INFRASTRUCTURE MANAGEMENT (VIM)

- **Middleware to manage virtual machines and infrastructure of IaaS “clouds”**

- **Examples**
 - **OpenNebula**
 - **Nimbus**
 - **Eucalyptus**
 - **OpenStack**

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.101
------------------	---	---------

101

VIM FEATURES

- **Create/destroy VM Instances**
- **Image repository**
 - **Create/Destroy/Update images**
 - **Image persistence**

- **Contextualization of VMs**
 - **Networking address assignment**
 - **DHCP / Static IPs**
 - **Manage SSH keys**

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.102
------------------	---	---------

102

VIM FEATURES - 2

- Virtual network configuration/management
 - Public/Private IP address assignment
 - Virtual firewall management
 - Configure/support isolated VLANs (private clusters)

- Support common virtual machine managers (VMMs)
 - XEN, KVM, VMware
 - Support via libvirt library

October 31, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]
School of Engineering and Technology, University of Washington - Tacoma

L10.103

103

VIM FEATURES - 3

- Shared “Elastic” block storage
 - Facility to create/update/delete VM disk volumes
 - Amazon EBS
 - Eucalyptus SC
 - OpenStack Volume Controller

106

CLOUD ENABLING TECHNOLOGY

- *Adapted from Ch. 5 from Cloud Computing Concepts, Technology & Architecture*
- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- **Multitenant technology**
- Web/web services technology

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.107
------------------	---	---------

107

4. MULTITENANT APPLICATIONS

- Each tenant (like in an apartment) has their own view of the application
- Tenants are unaware of their neighbors
- Tenants can only access their data, no access to data and configuration that is not their own
- Customizable features
 - UI, business process, data model, access control
- Application architecture
 - User isolation, data security, recovery/backup by tenant, scalability for a tenant, for tenants, metered usage, data tier isolation

October 31, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L10.108
------------------	---	---------

108

MULTITENANT APPS - 2

- Forms the basis for SaaS (applications)

------------------	---	---------

110

5. WEB SERVICES/WEB

- Web services technology is a key foundation of cloud computing's "as-a-service" cloud delivery model
- SOAP - "Simple" object access protocol
 - First generation web services
 - WSDL - web services description language
 - UDDI - universal description discovery and integration
 - SOAP services have their own unique interfaces
- REST - instead of defining a custom technical interface REST services are built on the use of HTTP protocol
- HTTP GET, PUT, POST, DELETE

October 31, 2023

School of Engineering and Technology, University of Washington - Tacoma

L10.111

111

HYPertext TRANSPORT PROTOCOL (HTTP)

- An ASCII-based request/reply protocol for transferring information on the web
- HTTP request includes:
 - request method (GET, POST, etc.)
 - Uniform Resource Identifier (URI)
 - HTTP protocol version understood by the client
 - headers—extra info regarding transfer request
- HTTP response from server
 - Protocol version & status code →
 - Response headers
 - Response body

HTTP status codes:

2xx — *all is well*
3xx — *resource moved*
4xx — *access problem*
5xx — *server error*

School of Engineering and Technology, University of Washington - Tacoma

L10.112

112

REST: REPRESENTATIONAL STATE TRANSFER

- Web services protocol
- *Supersedes SOAP* – Simple Object Access Protocol
- Access and manipulate web resources with a predefined set of stateless operations (known as web services)
- Requests are made to a URI
- Responses are most often in JSON, but can also be HTML, ASCII text, XML, no real limits as long as text-based
- HTTP verbs: GET, POST, PUT, DELETE, ...

REST - 2

- App manipulates one or more types of resources.
- Everything the app does can be characterized as some kind of operation on one or more resources.
- Frequently services are CRUD operations (create/read/update/delete)
 - Create a new resource
 - Read resource(s) matching criterion
 - Update data associated with some resource
 - Destroy a particular a resource
- Resources are often implemented as objects in OO languages

118

REST ARCHITECTURAL ADVANTAGES

- **Performance:** component interactions can be the dominant factor in user-perceived performance and network efficiency
- **Scalability:** to support large numbers of services and interactions among them
- **Simplicity:** of the Uniform Interface
- **Modifiability:** of services to meet changing needs (even while the application is running)
- **Visibility:** of communication between services
- **Portability:** of services by redeployment
- **Reliability:** resists failure at the system level as redundancy of infrastructure is easy to ensure
