

# TCSS 562: SOFTWARE ENGINEERING FOR CLOUD COMPUTING

## AWS Overview and Demo II, Cloud Enabling Technology

Wes J. Lloyd  
School of Engineering and Technology  
University of Washington - Tacoma

1

## OFFICE HOURS – FALL 2023

- **THIS WEEK**
- **Tuesdays:**
  - 2:30 to 3:30 pm - CP 229
- **\*\*\* Friday \*\*\***
  - 1:30 pm to 2:30 pm – ONLINE via Zoom
- Or email for appointment

> Office Hours set based on Student Demographics survey feedback

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.2
------------------	---	-------

2

## APOLOGY

- I accidentally used the Tuesday Office Hours Zoom link for Lecture 10
- The Lecture 10 zoom link accidentally was created for 3:40 'am' instead of 'pm'
- Initially there were fewer people on Zoom
  - I thought it was due to Halloween
- Many students figured out the Zoom link after awhile
- The lecture 10 recording is unaffected by the Zoom link swap
- I apologize for the error

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.3
------------------	---	-------

3

## LOOKING FOR CSS GRADUATE STUDENT VOLUNTEER

- The Computer Science & Systems program is looking for a graduate CSS student to volunteer to serve on the CSS hiring committee in the AY 2023-24
- The CSS program is planning to expand and hire 3 new tenure-track professors to start in AY 2024-25.
- Most of the volunteer effort will be in Winter 2024
- We will invite from 9 to 12 new faculty candidates to campus for interviews
- Candidates will give research talks from ~12:30 to 1:20p
- The student volunteer will help advertise the sessions amongst students and survey students to capture feedback regarding the candidates
- The volunteer will work with Toan Nguyen the undergraduate CSS representative
- If interested, contact: [wllloyd@uw.edu](mailto:wllloyd@uw.edu)

TCSS 562 - Online Daily Feedback Survey - 10/5  
Started: Oct 7 at 1:13am  
Quiz Instructions

Question 1 0.5 pts

On a scale of 1 to 10, please classify your perspective on material covered in today's class:

1 2 3 4 5 6 7 8 9 10  
Mostly Review To Me Equal New and Review Mostly New to Me

Question 2 0.5 pts

Please rate the pace of today's class:

1 2 3 4 5 6 7 8 9 10  
Slow Just Right Fast

November 2, 2023 TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma L11.7

7

## MATERIAL / PACE

- Please classify your perspective on material covered in today's class (**47** respondents):
  - 1-mostly review, 5-equal new/review, 10-mostly new
  - **Average - 6.23** (↑ - *previous 6.11*)
- Please rate the pace of today's class:
  - 1-slow, 5-just right, 10-fast
  - **Average - 5.77** (↑ - *previous 5.31*)
- **Response rates:**
  - TCSS 462: 26/44 - 59.1%
  - TCSS 562: 21/25 - 84.0%

November 2, 2023 TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma L11.8

8

## FEEDBACK FROM 10/31

- **When an ec2 instance associated with a persistent spot request is terminated, does it automatically come back because the spot request is still active?**
- YES, if there is capacity for the instance type, availability zone, etc.
- NO, if there is temporarily no capacity, but once capacity is restored, the instance will be restored
  
- **Does the instance stay off until the load on AWS EC2 decreases?**
- Yes, if the termination was due to high demand
  
- **KEY POINT:** Nothing removes the persistent spot request except the user deleting the spot request.

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.9

9

## FEEDBACK - 2

- **EC2 Spot Instance Advisor:**
- <https://aws.amazon.com/ec2/spot/instance-advisor/>
- Provides sortable list of ec2 instance types with interruption (termination) frequencies
- Helps you choose an instance type that is less likely to be terminated
  
- **Best practices for using spot instances:**
- <https://docs.aws.amazon.com/whitepapers/latest/cost-optimization-leveraging-ec2-spot-instances/spot-best-practices.html>

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.10

10

## FEEDBACK - 3

- ***What is “bare metal”?***
- A bare metal server is not shared with anyone
- There is no virtualization hypervisor  
*(program the contextualizes and hosts virtual machines)*
- The operating system is installed directly on the root disk and the machine is booted directly like a laptop or desktop computer
- The user can install any operating system and make configurations changes to the machine’s base operating system
- The user can then install and control a virtualization hypervisor on bare metal servers
- Bare metal servers were offered on AWS starting in ~2017

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.11
------------------	---	--------

11

## TERM PROJECT PROPOSALS

- 18 Total term project proposals received
- 14 teams of 4
- 4 teams of 3
- 8 proposals reviewed thus far, 10 remaining
  - 4 proposals accepted
  - 4 proposals – revisions requested
- Application Use Cases (summary to be provided):
  - 5 TLQ pipelines
  - 1 image generation (AI image generation model on ec2)
  - 1 NLP pipeline (sentiment analysis)
  - 1 serverless chatbot

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.12
------------------	---	--------

12

## AWS CLOUD CREDITS UPDATE

- AWS CLOUD CREDITS ARE NOW AVAILABLE FOR TCSS 462/562
- Credits provided on request with expiry of Sept 30, 2024
- Credit codes must be securely exchanged
- Request codes by sending an email with the subject "AWS CREDIT REQUEST" to [wllloyd@uw.edu](mailto:wllloyd@uw.edu)
- Codes can also be obtained in person (or zoom), in the class, during the breaks, after class, during office hours, by appt
  - 57 credit requests fulfilled as of Nov 1 @ 11:59p
- Codes not provided using discord

November 2, 2023	TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.13
------------------	--	--------

13

## OBJECTIVES - 11/2

- Questions from 10/31
- **Tutorials Questions**
- Tutorial 6 - Serverless Databases
- AWS Overview and demo
- Tutorial 4 Demo
- Ch. 5: Cloud Enabling Technology

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.14
------------------	---	--------

14

## TUTORIAL 0

- Getting Started with AWS
- [http://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462\\_562\\_f2023\\_tutorial\\_0.pdf](http://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_0.pdf)
- Create an AWS account
- Create account credentials for working with the CLI
- Install awsconfig package
- Setup awsconfig for working with the AWS CLI

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.15
------------------	---	--------

15

## TUTORIAL 3 – DUE OCT 30

- Best Practices for Working with Virtual Machines on Amazon EC2
- [http://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462\\_562\\_f2023\\_tutorial\\_3.pdf](http://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_3.pdf)
- Creating a spot VM
- Creating an image from a running VM
- Persistent spot request
- Stopping (pausing) VMs
- EBS volume types
- Ephemeral disks (local disks)
- Mounting and formatting a disk
- Disk performance testing with Bonnie++
- Cost Saving Best Practices

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.16
------------------	---	--------

16

## TUTORIAL 4 – DUE NOV 6

- Introduction to AWS Lambda with the Serverless Application Analytics Framework (SAAF)
- [https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462\\_562\\_f2023\\_tutorial\\_4.pdf](https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_4.pdf) (link to be posted)
- Obtaining a Java development environment
- Introduction to Maven build files for Java
- Create and Deploy “hello” Java AWS Lambda Function
  - Creation of API Gateway REST endpoint
- Sequential testing of “hello” AWS Lambda Function
  - API Gateway endpoint
  - AWS CLI Function invocation
- Observing SAAF profiling output
- Parallel testing of “hello” AWS Lambda Function with faas\_runner
- Performance analysis using faas\_runner reports
- Two function pipeline development task

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.17

17

## TUTORIAL 5 – DUE NOV 13

- Introduction to Lambda II: Working with Files in S3 and CloudWatch Events
- [https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462\\_562\\_f2023\\_tutorial\\_5.pdf](https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_5.pdf)
- Customize the Request object (add getters/setters)
  - Why do this instead of HashMap ?
- Import dependencies (jar files) into project for AWS S3
- Create an S3 Bucket
- Give your Lambda function(s) permission to work with S3
- Write to the CloudWatch logs
- Use of CloudTrail to generate S3 events
- Creating CloudWatch rule to capture events from CloudTrail
- Have the CloudWatch rule trigger a target Lambda function with a static JSON input object (hard-coded filename)
- **Optional:** for the S3 PutObject event, dynamically extract the name of the file put to the S3 bucket for processing

23

# CLOUD ENABLING TECHNOLOGY

24

## CLOUD ENABLING TECHNOLOGY

- *Adapted from Ch. 5 from Cloud Computing Concepts, Technology & Architecture*
- **Broadband networks and internet architecture**
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.25
------------------	---	--------

25

## 1. BROADBAND NETWORKS AND INTERNET ARCHITECTURE

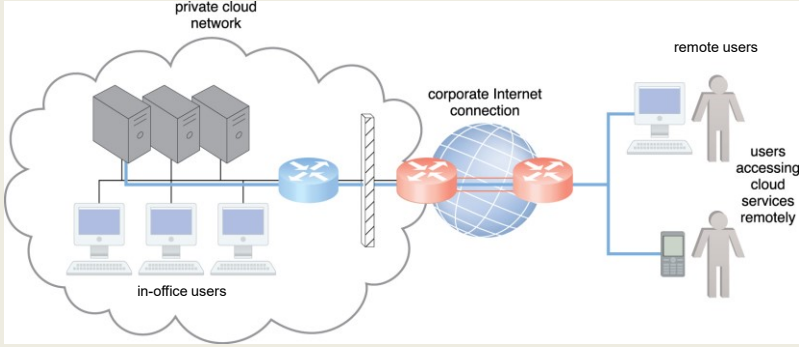

- Clouds must be connected to a network
- Inter-networking: Users' network must connect to cloud's network
- Public cloud computing relies heavily on the **internet**

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.26
------------------	---	--------

26

## PRIVATE CLOUD NETWORKING

- For institutions with in-house private clouds

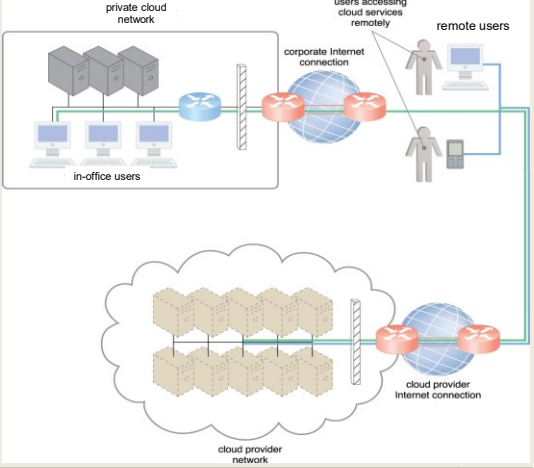

The diagram illustrates a private cloud network. On the left, a cloud contains three server racks and three desktop computers, labeled 'private cloud network' and 'in-office users'. A blue router connects this network to a central globe representing the 'corporate Internet connection'. To the right, another red router connects the corporate Internet to 'remote users', which includes a person at a computer and a person with a mobile phone. A caption below the diagram reads: 'users accessing cloud services remotely'.

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.27
------------------	---	--------

27

## PUBLIC CLOUD NETWORKING

- Resources can be extended by adding public cloud
- Places further dependency on the internet to provide connectivity

The diagram shows a hybrid cloud architecture. At the top, a 'private cloud network' with servers and 'in-office users' is connected via a blue router to a central 'corporate Internet connection' (globe). This corporate Internet is also connected to 'remote users' (person at computer and person with phone). Below this, a 'cloud provider network' (cloud with server racks) is connected via a red router to a 'cloud provider Internet connection' (globe). This provider Internet is also connected to the 'remote users', showing that they can access services from the public cloud through the corporate Internet.

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.28
------------------	---	--------

28

## INTERNETWORKING KEY POINTS

- Cloud consumers and providers typically communicate via the internet
- Decentralized provisioning and management model is not controlled by the cloud consumers or providers
- Inter-networking (internet) relies on connectionless packet switching and route-based interconnectivity
- Routers and switches support communication
- Network bandwidth and latency influence QoS, which is heavily impacted by network congestion

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.29

29

## CLOUD ENABLING TECHNOLOGY

- *Adapted from Ch. 5 from Cloud Computing Concepts, Technology & Architecture*
- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.30

30

## 2. DATA CENTER TECHNOLOGY

- Grouping servers together (clusters):
- Enables power sharing
- Higher efficiency in shared IT resource usage (less duplication of effort)
- Improved accessibility and organization

- Key components:
  - Virtualized and physical server resources
  - Standardized, modular hardware
  - Automation support: enable server provisioning, configuration, patching, monitoring without supervision... **tool/API support is desirable**

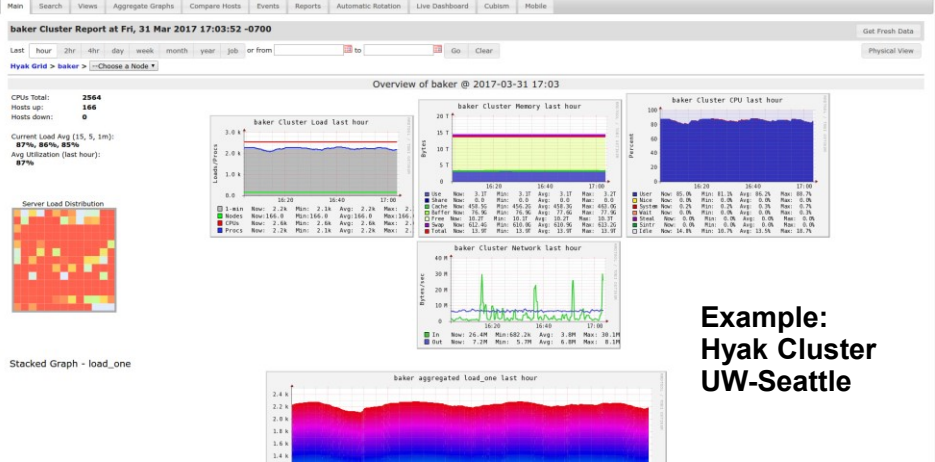

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.31

31

## CLUSTER MANAGEMENT TOOLS

The screenshot displays the Hyak Cluster Management Tool interface for the 'baker' cluster. It includes a navigation menu at the top, a search bar, and a main dashboard with several charts:

- Overview of baker @ 2017-03-31 17:03:** Shows CPU usage (2564 total, 156 up, 0 down), current load (87% avg), and server load distribution.
- baker Cluster Load last hour:** A line graph showing load over time.
- baker Cluster Memory last hour:** A line graph showing memory usage over time.
- baker Cluster CPU last hour:** A line graph showing CPU usage over time.
- baker Cluster Network last hour:** A line graph showing network activity over time.
- baker aggregated load\_one last hour:** A heatmap-style graph showing aggregated load over time.

Example:  
Hyak Cluster  
UW-Seattle

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.32

32

## DATA CENTER TECHNOLOGY – KEY COMPONENTS

- Remote operation / management
- **High availability support:** \*\*redundant everything\*\*  
Includes: power supplies, cabling, environmental control systems, communication links, duplicate warm replica HW
- **Secure design:** physical and logical access control
- **Servers:** rackmount, etc.
- **Storage:** hard disk arrays (RAID)
- storage area network (SAN): disk array w/ multiple servers (individual nodes w/ disks) and a dedicated network
- network attached storage (NAS): inexpensive single node with collection of disks, provides shared filesystems, for NFS, etc.
- **Network hardware:** backbone routers (WAN to LAN connectivity), firewalls, VPN gateways, managed switches/routers

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.33
------------------	---	--------

33

## CLOUD ENABLING TECHNOLOGY

- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.34
------------------	---	--------

34

## 3. VIRTUALIZATION TECHNOLOGY

- Convert a physical IT resource into a virtual IT resource
- Servers, storage, network, power (virtual UPSs)
- Virtualization supports:
  - Hardware independence
  - Server consolidation
  - Resource replication
  - Resource pooling
  - Elastic scalability
- Virtual servers
  - Operating-system based virtualization
  - Hardware-based virtualization

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.35

35

## VIRTUAL MACHINES

- Emulation/simulation of a computer in software
- Provides a substitute for a real computer or server
- Virtualization platforms provide functionality to run an entire operating system
- Allows running multiple different operating systems, or operating systems with different versions simultaneously on the same computer

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.36

36

## KEY VIRTUALIZATION TRADEOFF

■ Tradeoff space:

**What is the “right” level of abstraction in the cloud for sharing resources with users?**

**Degree of Hardware Abstraction**

**Abstraction Concerns:**

- **Overhead**
- **Performance**
- **Isolation**
- **Security**

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.37
------------------	---	--------

37

## ABSTRACTION CONCERNS

- **Overhead with too many instances w/ heavy abstractions**
  - Too many instances using a heavy abstraction can lead to hidden resource utilization and waste
  - Example: Dedicated server with 48 VMs each with separate instance of Ubuntu Linux
  - Idle VMs can reduce performance of co-resident jobs/tasks
- **“Virtualization” Overhead**
  - Cost of virtualization an OS instance
  - Overhead has dropped from ~100% to ~1% over last decade
- **Performance**
  - Impacted by weight of abstraction and virtualization overhead

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.38
------------------	---	--------

38

## ABSTRACTION CONCERNS - 2

- **Isolation**
  - From others:  
What user A does should not impact user B in any noticeable way
- **Security**
  - User A and user B's data should be always separate
  - User A's actions are not perceivable by User B

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.39
------------------	---	--------

39

## TYPES OF ABSTRACTION IN THE CLOUD

- **Virtual Machines** – original IaaS cloud abstraction
- **OS and Application Containers** – seen with CaaS
  - **OS Container** – replacement for VM, mimics full OS instance, heavier
  - OS containers run 100s of processes just like a VM
  - **App Container** – Docker: packages dependencies to easily transport and run an application anywhere
  - Application containers run only a few processes
- **Micro VMs** – FaaS / CaaS
  - Lighter weight alternative to full VM (KVM, XEN, VirtualBox)
  - Firecracker
- **Unikernel Operating Systems** – research mostly
  - Single process, multi-thread operating system
  - Designed for cloud, objective to reduce overhead of running too many OS instances

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.40
------------------	---	--------

40

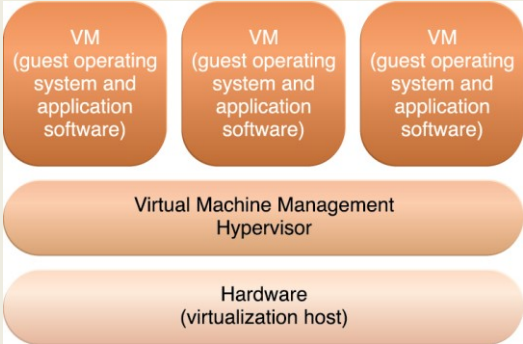

# VIRTUAL MACHINES

- **Type 1 hypervisor**
  - Typically involves a special virtualization kernel that runs directly on the system to share the underlying machine with many guest VMs
  - Paravirtualization introduced to directly share system resources with guests bypassing full emulation
  - VM becomes equal participant in sharing the network card for example
- **Type 2 hypervisor**
  - Typically involves the **Full Virtualization** of the guest, where everything is simulated/emulated
- **Hardware level support** (i.e. features introduced on CPUs) have made virtualization faster in all respects shrinking virtualization overhead

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.41
------------------	---	--------

41

# TYPE 1 HYPERVISOR

The diagram illustrates the architecture of a Type 1 Hypervisor. At the top, three orange rounded rectangles represent individual VMs, each containing the text 'VM (guest operating system and application software)'. These VMs are positioned above a larger orange rounded rectangle labeled 'Virtual Machine Management Hypervisor'. Below the hypervisor is another large orange rounded rectangle labeled 'Hardware (virtualization host)'. This shows a direct path from the VMs through the hypervisor to the hardware, without a host operating system.

- **Host OS and VMs run atop the hypervisor**
- **The boot OS is the hypervisor kernel**
- **Xen dom0**

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.42
------------------	---	--------

42

## TYPE 1 HYPERVISOR

- Acts as a control program
- Miniature OS kernel that manages VMs
- Boots and runs on bare metal
- Also known as Virtual Machine Monitor (VMM)
- **Paravirtualization:** Kernel includes I/O drivers
- VM guest Oses must use special kernel to interoperate
- Paravirtualization provides hooks to the guest VMs
- Kernel traps instructions (i.e. device I/O) to implement sharing & multiplexing
- User mode instructions run directly on the CPU
- Objective: minimize virtualization overhead
- Classic example is XEN (dom0 kernel)

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.43
------------------	---	--------

43

## COMMON VMMS: PARAVIRTUALIZATION

- TYPE 1 Hypervisor
- XEN
- Citrix Xen-server (a commercial version of XEN)
- VMWare ESXi
- KVM (virtualization support in kernel)
  
- Paravirtual I/O drivers introduced
  - XEN
  - KVM
  - Virtualbox

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.44
------------------	---	--------

44

45

## XEN - 2

- VMs managed as “domains”
- Domain 0 is the hypervisor domain
  - Host OS is installed to run on bare-metal, but doesn't directly facilitate virtualization (*unlike KVM*)
- Domains 1..n are guests (VMs) – not bare-metal

```
xentop - 17:53:48 Xen 3.1.2-398.e15
3 domains: 1 running, 2 blocked, 0 paused, 0 crashed, 0 dying, 0 shutdown

------------------	---	--------

46

## XEN - 3

- Physical machine boots special XEN kernel
- Kernel provides paravirtual API to manage CPU & device multiplexing
- Guests require modified XEN-aware kernels
- Xen supports full-virtualization for unmodified OS guests in hvm mode
- Amazon EC2 largely based on modified version of XEN hypervisor (EC2 gens 1-4)
- XEN provides its own CPU schedulers, I/O scheduling

November 2, 2023

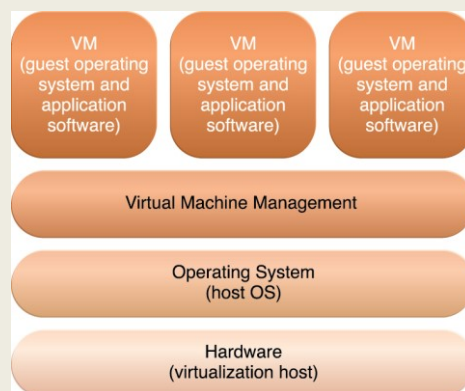

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.47

47

## TYPE 2 HYPERVISOR

- Adds additional layer

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.48

48

## TYPE 2 HYPERVISOR

- **Problem: Original x86 CPUs could not trap special instructions**
- Instructions not specially marked
- **Solution: Use Full Virtualization**
- Trap ALL instructions
- “Fully” simulate entire computer
- Tradeoff: Higher Overhead
- **Benefit: Can virtualize any operating system without modification**

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.49
------------------	---	--------

49

## CHECK FOR VIRTUALIZATION SUPPORT

- See:  
<https://cyberciti.biz/faq/linux-xen-vmware-kvm-intel-vt-amd-v-support>
- # check for Intel VT CPU virtualization extensions on Linux  
`grep -color vmx /proc/cpuinfo`
- # check for AMD V CPU virtualization extensions on Linux  
`grep -color svm /proc/cpuinfo`
- Also see 'lscpu' → “Virtualization:”
- Other Intel CPU features that help virtualization:  
`ept vpid tpr_shadow flexpriority vnmi`

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.50
------------------	---	--------

50

# KERNEL BASED VIRTUAL MACHINES (KVM)

- x86 HW notoriously difficult to virtualize
- Extensions added to 64-bit Intel/AMD CPUs
  - Provides hardware assisted virtualization
  - New “guest” operating mode
  - Hardware state switch
  - Exit reason reporting
  - Intel/AMD implementations different
    - Linux uses vendor specific kernel modules

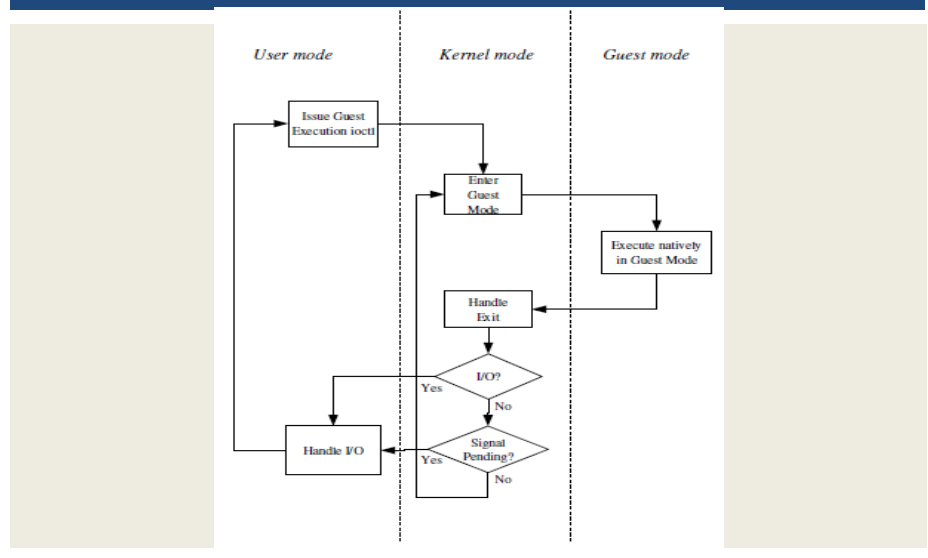

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.51

51

## KVM - 2

52

## KVM - 3

- **KVM has /dev/kvm device file node**
  - **Linux character device, with operations:**
    - Create new VM
    - Allocate memory to VM
    - Read/write virtual CPU registers
    - Inject interrupts into vCPUs
    - Running vCPUs
- **VMs run as Linux processes**
  - **Scheduled by host Linux OS**
  - **Can be pinned to specific cores with “taskset”**

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.53

53

## KVM PARAVIRTUALIZED I/O

- **KVM - Virtio**
  - **Custom Linux based paravirtual device drivers**
  - **Supersedes QEMU hardware emulation (full virt.)**
  - **Based on XEN paravirtualized I/O**
  - **Custom block device driver provides paravirtual device emulation**
    - Virtual bus (memory ring buffer)
    - Requires hypercall facility
    - Direct access to memory

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.54

54

## KVM DIFFERENCES FROM XEN

- KVM requires CPU VMX support
  - Virtualization management extensions
- KVM can virtualize any OS without special kernels
  - Less invasive
- KVM was originally separate from the Linux kernel, but then integrated
- KVM is type 1 hypervisor because the machine boots Linux which has integrated support for virtualization
- Different than XEN because XEN kernel alone is not a full-fledged OS

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.55

55

## KVM ENHANCEMENTS

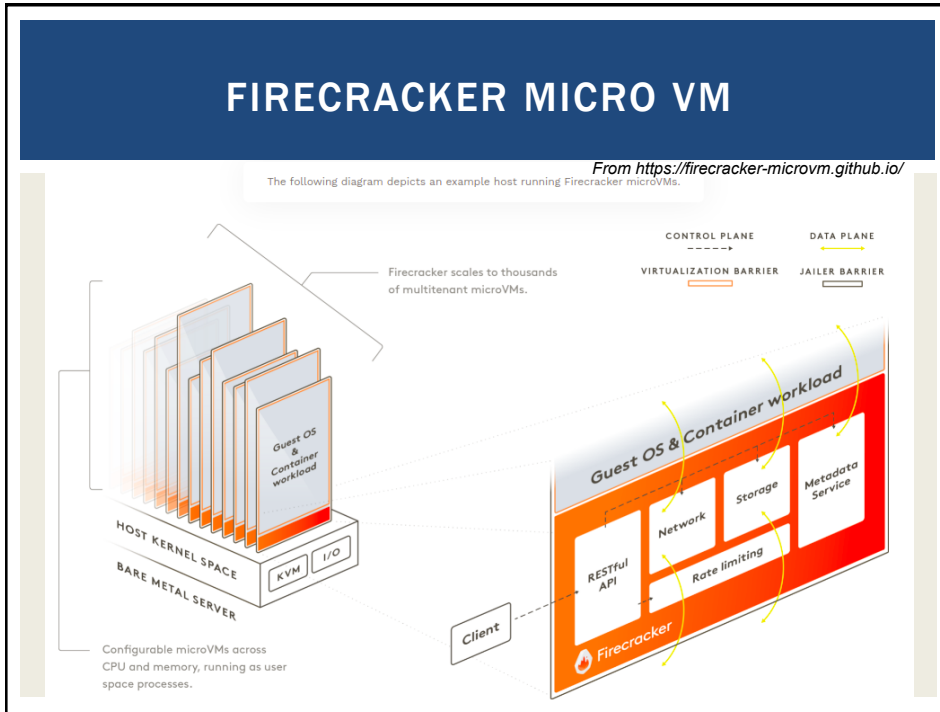

- Paravirtualized device drivers
  - Virtio
- Guest Symmetric Multiprocessor (SMP) support
  - Leverages multiple on-board CPUs
  - Supported as of Linux 2.6.23
- VM Live Migration
- Linux scheduler integration
  - Optimize scheduler with knowledge that KVM processes are virtual machines

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.56

56

57

## FIRECRACKER MICRO VM

- Provides a virtual machine monitor (VMM) (i.e. hypervisor) using **KVM** to create and manage microVMs
- Has a minimalist design with goals to improve security, decreases the startup time, and increases hardware utilization
- Excludes unnecessary devices and guest functionality to reduce memory footprint and attack surface area of each microVM
- Supports boot time of **<125ms**, **<5 MiB** memory footprint
- Can run **100s** of microVMs on a host, launching up to **150/sec**
- Is available on **64-bit Intel, AMD, and Arm CPUs**
- Used to host **AWS Lambda** and **AWS Fargate**
- Has been open sourced under the **Apache 2.0** license

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.58
------------------	---	--------

58

## FIRECRACKER - 2

- **Minimalistic**
- MicroVMs run as separate processes on the host
- Only 5 emulated devices are available: virtio-net, virtio-block, virtio-vsock, serial console, and a minimal keyboard controller used only to stop the microVM
- Rate limiters can be created and configured to provision resources to support bursts or specific bandwidth/operation limitations
- **Configuration**
- A RESTful API enables common actions such as configuring the number of vCPUs or launching microVMs
- A metadata service between the host and guest provides configuration information

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.59
------------------	---	--------

59

## FIRECRACKER - 2

- **Security**
- Runs in user space (*not the root user*) on top of the Linux Kernel-based Virtual Machine (KVM) hypervisor to create microVMs
- Lambda functions, Fargate containers, or container groups can be encapsulated using Firecracker through KVM, enabling workloads from different customers to run on the same machine, without sacrificing security or efficiency
- MicroVMs are further isolated with common Linux user-space security barriers using a companion program called “jailer” which provides a second line of defense if KVM is compromised

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.60
------------------	---	--------

60

# UNIKERNELS

- Lightweight alternative to containers and VMs
  - Custom Cloud Operating System
  - Single process, multiple threads, runs one program
  - Launch separately atop of hypervisor (XEN/KVM)
  - Reduce overhead, duplication of heavy weight OS
  
- OSv is most well known unikernel
- Several others exist has research projects
- More information at: <http://unikernel.org/>
- Google Trends OSv →

61

# VIRTUALIZATION MANAGEMENT

- Virtual infrastructure management (VIM) tools
- Tools that manage pools of virtual machines, resources, etc.
- Private cloud software systems can be considered as a VIM
  
- Considerations:
  - Performance overhead
    - Paravirtualization: custom OS kernels, I/O passed directly to HW w/ special drivers
  - Hardware compatibility for virtualization
  - Portability: virtual resources tend to be difficult to migrate cross-clouds

November 2, 2023 TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L11.62

62

## VIRTUAL INFRASTRUCTURE MANAGEMENT (VIM)

- **Middleware to manage virtual machines and infrastructure of IaaS “clouds”**
  
- **Examples**
  - **OpenNebula**
  - **Nimbus**
  - **Eucalyptus**
  - **OpenStack**

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.63
------------------	---	--------

63

## VIM FEATURES

- **Create/destroy VM Instances**
- **Image repository**
  - **Create/Destroy/Update images**
  - **Image persistence**
  
- **Contextualization of VMs**
  - **Networking address assignment**
    - **DHCP / Static IPs**
  - **Manage SSH keys**

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.64
------------------	---	--------

64

## VIM FEATURES - 2

- Virtual network configuration/management
  - Public/Private IP address assignment
  - Virtual firewall management
  - Configure/support isolated VLANs (private clusters)
- Support common virtual machine managers (VMMs)
  - XEN, KVM, VMware
  - Support via libvirt library

November 2, 2023

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023]  
School of Engineering and Technology, University of Washington - Tacoma

L11.65

65

## VIM FEATURES - 3

- Shared “Elastic” block storage
  - Facility to create/update/delete VM disk volumes
    - Amazon EBS
    - Eucalyptus SC
    - OpenStack Volume Controller

November 2, 2023

66

## CONTAINER ORCHESTRATION FRAMEWORKS

- Middleware to manage Docker application container deployments across virtual clusters of Docker hosts (VMs)
- Considered Infrastructure-as-a-Service
  
- Opensource
  - Kubernetes framework
  - Docker swarm
  - Apache Mesos/Marathon
  
- Proprietary
  - Amazon Elastic Container Service

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.67
------------------	---	--------

67

## CONTAINER SERVICES

- Public cloud container cluster services
  - Azure Kubernetes Service (AKS)
  - Amazon Elastic Container Service for Kubernetes (EKS)
  - Google Kubernetes Engine (GKE)
  
- Container-as-a-Service
  - Azure Container Instances (ACI - April 2018)
  - AWS Fargate (November 2017)
  - Google Kubernetes Engine Serverless Add-on (July 2018)
  - Google Cloud Run (2019)
  - Google Cloud Run jobs (2022)

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.68
------------------	---	--------

68

## CLOUD ENABLING TECHNOLOGY

- *Adapted from Ch. 5 from Cloud Computing Concepts, Technology & Architecture*
- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- **Multitenant technology**
- Web/web services technology

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.69
------------------	---	--------

69

## 4. MULTITENANT APPLICATIONS

- Each tenant (like in an apartment) has their own view of the application
- Tenants are unaware of their neighbors
- Tenants can only access their data, no access to data and configuration that is not their own
- Customizable features
  - UI, business process, data model, access control
- Application architecture
  - User isolation, data security, recovery/backup by tenant, scalability for a tenant, for tenants, metered usage, data tier isolation

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.70
------------------	---	--------

70

## MULTITENANT APPS - 2

- Forms the basis for SaaS (applications)

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.71
------------------	---	--------

71

## CLOUD ENABLING TECHNOLOGY

- Adapted from Ch. 5 from *Cloud Computing Concepts, Technology & Architecture*
- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology**

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.72
------------------	---	--------

72

## 5. WEB SERVICES/WEB

- Web services technology is a key foundation of cloud computing’s “**as-a-service**” cloud delivery model
- SOAP - “Simple” object access protocol
  - First generation web services
  - WSDL - web services description language
  - UDDI - universal description discovery and integration
  - SOAP services have their own unique interfaces
- REST - instead of defining a custom technical interface REST services are built on the use of HTTP protocol
- HTTP GET, PUT, POST, DELETE

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.73
------------------	---	--------

73

## HYPERTEXT TRANSPORT PROTOCOL (HTTP)

- An ASCII-based request/reply protocol for transferring information on the web
- HTTP request includes:
  - request method (GET, POST, etc.)
  - Uniform Resource Identifier (URI)
  - HTTP protocol version understood by the client
  - headers—extra info regarding transfer request
- HTTP response from server
  - Protocol version & status code →
  - Response headers
  - Response body

**HTTP status codes:**

2xx — *all is well*

3xx — *resource moved*

4xx — *access problem*

5xx — *server error*

November 2, 2023	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L11.74
------------------	---	--------

74

## REST: REPRESENTATIONAL STATE TRANSFER

- Web services protocol
- *Supersedes SOAP* – Simple Object Access Protocol
- Access and manipulate web resources with a predefined set of stateless operations (known as web services)
- Requests are made to a URI
- Responses are most often in JSON, but can also be HTML, ASCII text, XML, no real limits as long as text-based
- HTTP verbs: GET, POST, PUT, DELETE, ...

79

## REST - 2

- App manipulates one or more types of resources.
- Everything the app does can be characterized as some kind of operation on one or more resources.
- Frequently services are CRUD operations (create/read/update/delete)
  - Create a new resource
  - Read resource(s) matching criterion
  - Update data associated with some resource
  - Destroy a particular a resource
- Resources are often implemented as objects in OO languages

School of Engineering and Technology, University of Washington - Tacoma

L11.80

80

## REST ARCHITECTURAL ADVANTAGES

- **Performance:** component interactions can be the dominant factor in user-perceived performance and network efficiency
- **Scalability:** to support large numbers of services and interactions among them
- **Simplicity:** of the Uniform Interface
- **Modifiability:** of services to meet changing needs (even while the application is running)
- **Visibility:** of communication between services
- **Portability:** of services by redeployment
- **Reliability:** resists failure at the system level as redundancy of infrastructure is easy to ensure
