

TCSS 562: SOFTWARE ENGINEERING FOR CLOUD COMPUTING

Cloud Enabling Technology II

Wes J. Lloyd
 School of Engineering and Technology
 University of Washington - Tacoma

1

OFFICE HOURS - FALL 2023

- THIS WEEK**
- Campus is closed Friday November 10, due to the Veteran's Day holiday
- Tuesdays:**
 - 2:30 to 3:30 pm - CP 229
- *** Thursday *****
 - 6:00 pm to 7:00 pm - CP 229 and via Zoom
- Or email for appointment

> Office Hours set based on Student Demographics survey feedback

November 7, 2023 | TCSS462/562 (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma | L12.2

2

OBJECTIVES - 11/7

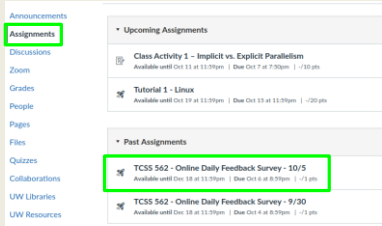

- Questions from 11/2**
- Tutorials Questions
- Class Presentations: Cloud Technology or Research Paper Review
- Ch. 5: Cloud Enabling Technology

November 7, 2023 | TCSS462/562 (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma | L12.3

3

ONLINE DAILY FEEDBACK SURVEY

- Daily Feedback Quiz in Canvas - Take After Each Class
- Extra Credit for completing

November 7, 2023 | TCSS462/562 (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma | L12.4

4

TCSS 562 - Online Daily Feedback Survey - 10/5

Started: Oct 7 at 1:13am

Quiz Instructions

Question 1 (0.5 pts)

On a scale of 1 to 10, please classify your perspective on material covered in today's class:

1 2 3 4 5 6 7 8 9 10

Mostly Review To Me | Equal New and Review | Mostly New To Me

Question 2 (0.5 pts)

Please rate the pace of today's class:

1 2 3 4 5 6 7 8 9 10

Slow | Just Right | Fast

November 7, 2023 | TCSS462/562 (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma | L12.5

5

MATERIAL / PACE

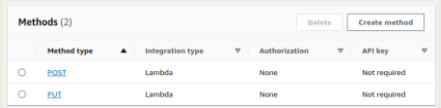

- Please classify your perspective on material covered in today's class (**5.4** respondents):
 - 1-mostly review, 5-equal new/review, 10-mostly new
 - Average - 6.11 (↓ - previous 6.23)**
- Please rate the pace of today's class:
 - 1-slow, 5-just right, 10-fast
 - Average - 5.52 (↓ - previous 5.77)**
- Response rates:**
 - TCSS 462: 34/44 - 77.27%
 - TCSS 562: 20/25 - 80.00%

November 7, 2023 | TCSS462/562 (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma | L12.6

6

FEEDBACK FROM 11/2

- Can the API Gateway distribute different types of requests to different AWS Lambda functions using one endpoint URL?
- Yes - for the resources, you can define two methods, where each method points to a different AWS Lambda function

November 7, 2023 | TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] | School of Engineering and Technology, University of Washington - Tacoma | L12.7

7

TERM PROJECT PROPOSALS

- 18 Total term project proposals received
- 14 teams of 4
- 4 teams of 3
- Round 1: 18 proposals reviewed thus far
 - 9 proposals accepted
 - 9 proposals - revisions requested
- Application Use Cases (summary to be provided):
 - 15 TLQ pipelines
 - 1 image generation (AI image generation model on ec2)
 - 1 NLP pipeline (sentiment analysis)
 - 1 serverless chatbot

November 7, 2023 | TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] | School of Engineering and Technology, University of Washington - Tacoma | L12.8

8

AWS CLOUD CREDITS UPDATE

- AWS CLOUD CREDITS ARE NOW AVAILABLE FOR TCSS 462/562
- Credits provided on request with expiry of Sept 30, 2024
- Credit codes must be securely exchanged
- Request codes by sending an email with the subject "AWS CREDIT REQUEST" to wloyd@uw.edu
- Codes can also be obtained in person (or zoom), in the class, during the breaks, after class, during office hours, by appt
 - 61 credit requests fulfilled as of Nov 6 @ 11:59p
- Codes not provided using discord

November 7, 2023 | TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] | School of Engineering and Technology, University of Washington - Tacoma | L12.9

9

OBJECTIVES - 11/7

- Questions from 11/2
 - Tutorials Questions**
 - Class Presentations:
 - Cloud Technology or Research Paper Review
 - Ch. 5: Cloud Enabling Technology

November 7, 2023 | TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] | School of Engineering and Technology, University of Washington - Tacoma | L12.10

10

TUTORIAL 0

- Getting Started with AWS
- http://faculty.washington.edu/wloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_0.pdf
- Create an AWS account
- Create account credentials for working with the CLI
- Install awsconfig package
- Setup awsconfig for working with the AWS CLI

November 7, 2023 | TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] | School of Engineering and Technology, University of Washington - Tacoma | L12.11

11

TUTORIAL 4 - DUE NOV 7

- Introduction to AWS Lambda with the Serverless Application Analytics Framework (SAAF)
- https://faculty.washington.edu/wloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_4.pdf (link to be posted)
- Obtaining a Java development environment
- Introduction to Maven build files for Java
- Create and Deploy "hello" Java AWS Lambda Function
 - Creation of API Gateway REST endpoint
- Sequential testing of "hello" AWS Lambda Function
 - API Gateway endpoint
 - AWS CLI Function invocation
- Observing SAAF profiling output
- Parallel testing of "hello" AWS Lambda Function with faas_runner
- Performance analysis using faas_runner reports
- Two function pipeline development task

November 7, 2023 | TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] | School of Engineering and Technology, University of Washington - Tacoma | L12.12

12

TUTORIAL 5 - DUE NOV 14

- Introduction to Lambda II: Working with Files in S3 and CloudWatch Events
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_5.pdf
- Customize the Request object (add getters/setters)
 - Why do this instead of HashMap ?
- Import dependencies (jar files) into project for AWS S3
- Create an S3 Bucket
- Give your Lambda function(s) permission to work with S3
- Write to the CloudWatch logs
- Use of CloudTrail to generate S3 events
- Creating CloudWatch rule to capture events from CloudTrail
- Have the CloudWatch rule trigger a target Lambda function with a static JSON input object (hard-coded filename)
- Optional:** for the S3 PutObject event, dynamically extract the name of the file put to the S3 bucket for processing

November 7, 2023 | TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] | L12.13
School of Engineering and Technology, University of Washington - Tacoma

13

TUTORIAL 6 - NOV 21

- Introduction to Lambda III: Serverless Databases
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2023_tutorial_6.pdf
- Create and use Sqlite databases using sqlite3 tool
- Deploy Lambda function with Sqlite3 database under /tmp
- Compare in-memory vs. file-based Sqlite DBs on Lambda
- Create an Amazon Aurora "Serverless" v2 MySQL database
- Using an ec2 instance in the same VPC (Region + availability zone) connect and interact with the database using the mysql CLI app
- Deploy an AWS Lambda function that uses the MySQL "serverless" database

November 7, 2023 | TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] | L12.14
School of Engineering and Technology, University of Washington - Tacoma

14

OBJECTIVES - 11/7

- Questions from 11/2
- Tutorials Questions
- Class Presentations:
Cloud Technology or Research Paper Review
- Ch. 5: Cloud Enabling Technology

November 7, 2023 | TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] | L12.15
School of Engineering and Technology, University of Washington - Tacoma

15

GROUP PRESENTATION

- TWO OPTIONS:**
- Cloud technology presentation**
- Cloud research paper presentation**
 - Recent & suggested papers will be posted at:
<http://faculty.washington.edu/wlloyd/courses/tcss562/papers/>
- Submit presentation type and topics (paper or technology) with desired dates of presentation via Canvas by:
Friday November 17th @ 11:59pm
- Presentation dates:
 - Tuesday November 28, Thursday November 30
 - Tuesday December 5, Thursday December 7

November 7, 2023 | TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] | L12.16
School of Engineering and Technology, University of Washington - Tacoma

16

OBJECTIVES - 11/7

- Questions from 11/2
- Tutorials Questions
- Class Presentations:
Cloud Technology or Research Paper Review
- Ch. 5: Cloud Enabling Technology

November 7, 2023 | TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] | L12.17
School of Engineering and Technology, University of Washington - Tacoma

17

CLOUD ENABLING TECHNOLOGY

18

CLOUD ENABLING TECHNOLOGY

- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.19

19

3. VIRTUALIZATION TECHNOLOGY

- Convert a physical IT resource into a virtual IT resource
- Servers, storage, network, power (virtual UPSs)
- Virtualization supports:
 - Hardware independence
 - Server consolidation
 - Resource replication
 - Resource pooling
 - Elastic scalability
- Virtual servers
 - Operating-system based virtualization
 - Hardware-based virtualization

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.20

20

VIRTUAL MACHINES

- Emulation/simulation of a computer in software
- Provides a substitute for a real computer or server
- Virtualization platforms provide functionality to run an entire operating system
- Allows running multiple different operating systems, or operating systems with different versions simultaneously on the same computer

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.21

21

KEY VIRTUALIZATION TRADEOFF

▪ Tradeoff space:
What is the "right" level of abstraction in the cloud for sharing resources with users?

Degree of Hardware Abstraction

Abstraction Concerns:

- Overhead
- Performance
- Isolation
- Security

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.22

22

ABSTRACTION CONCERNS

- **Overhead with too many instances w/ heavy abstractions**
 - Too many instances using a heavy abstraction can lead to hidden resource utilization and waste
 - Example: Dedicated server with 48 VMs each with separate instance of Ubuntu Linux
 - Idle VMs can reduce performance of co-resident jobs/tasks
- **"Virtualization" Overhead**
 - Cost of virtualization an OS instance
 - Overhead has dropped from ~100% to ~1% over last decade
- **Performance**
 - Impacted by weight of abstraction and virtualization overhead

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.23

23

ABSTRACTION CONCERNS - 2

- **Isolation**
 - From others: What user A does should not impact user B in any noticeable way
- **Security**
 - User A and user B's data should be always separate
 - User A's actions are not perceivable by User B

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.24

24

TYPES OF ABSTRACTION IN THE CLOUD

- **Virtual Machines** – original IaaS cloud abstraction
- **OS and Application Containers** – seen with CaaS
 - **OS Container** – replacement for VM, mimics full OS instance, heavier
 - OS containers run 100s of processes just like a VM
 - **App Container** – Docker: packages dependencies to easily transport and run an application anywhere
 - Application containers run only a few processes
- **Micro VMs** – FaaS / CaaS
 - Lighter weight alternative to full VM (KVM, XEN, VirtualBox)
 - Firecracker
- **Unikernel Operating Systems** – research mostly
 - Single process, multi-thread operating system
 - Designed for cloud, objective to reduce overhead of running too many OS instances

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L12.25

25

VIRTUAL MACHINES

- **Type 1 hypervisor**
 - Typically involves a special virtualization kernel that runs directly on the system to share the underlying machine with many guest VMs
 - Paravirtualization introduced to directly share system resources with guests bypassing full emulation
 - VM becomes equal participant in sharing the network card for example
- **Type 2 hypervisor**
 - Typically involves the **Full Virtualization** of the guest, where everything is simulated/emulated
- Hardware level support (i.e. features introduced on CPUs) have made virtualization faster in all respects shrinking virtualization overhead

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L12.26

26

TYPE 1 HYPERVISOR

- Host OS and VMs run atop the hypervisor
- The boot OS is the hypervisor kernel
- Xen dom0

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L12.27

27

TYPE 1 HYPERVISOR

- Acts as a control program
- Miniature OS kernel that manages VMs
- Boots and runs on bare metal
- Also known as Virtual Machine Monitor (VMM)
- **Paravirtualization**: Kernel includes I/O drivers
- VM guest OSes must use special kernel to interoperate
- Paravirtualization provides hooks to the guest VMs
- Kernel traps instructions (i.e. device I/O) to implement sharing & multiplexing
- User mode instructions run directly on the CPU
- **Objective: minimize virtualization overhead**
- Classic example is XEN (dom0 kernel)

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L12.28

28

COMMON VMMS: PARAVIRTUALIZATION

- **TYPE 1 Hypervisor**
- XEN
- Citrix Xen-server (a commercial version of XEN)
- VMWare ESXi
- KVM (virtualization support in kernel)
- Paravirtual I/O drivers introduced
 - XEN
 - KVM
 - Virtualbox

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L12.29

29

XEN

- Developed at Cambridge in ~ 2003

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L12.30

30

XEN - 2

- VMs managed as "domains"
- Domain 0 is the hypervisor domain
 - Host OS is installed to run on bare-metal, but doesn't directly facilitate virtualization (*unlike KVM*)
- Domains 1..n are guests (VMs) - not bare-metal

```

xenop - 17:53:48 Xen 3.1.2-398.el5
3 domains: 1 running, 2 blocked, 0 paused, 0 crashed, 0 dying, 0 shutdown
Mem: 8379564k total, 8377876k used, 1688k free CPU: 4 @ 2400MHz
NAME STATE CPU(sec) CPU(%) MEM(k) MEM(%) MAXMEM(k) MRXMEM(%) VCPUS
NETS NETTX(k) NETRX(k) VBDs VBD OO VBD RD VBD WR SSI#
centos --b--- 46 0.0 532352 6.4 1064960 12.7 1
1 27960 885 1 0 6313 37119 0
centos-2 --b--- 17 0.0 1056640 12.6 2113536 25.2 1
1 50 0 1 0 3981 541 0
Domain-0 ----r 2979 19.3 6568960 78.4 no limit n/a 4
4 1057374 290072 0 0 0 0 0 0
    
```

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.31

31

XEN - 3

- Physical machine boots special XEN kernel
- Kernel provides paravirtual API to manage CPU & device multiplexing
- Guests require modified XEN-aware kernels
- Xen supports full-virtualization for unmodified OS guests in hvm mode
- Amazon EC2 largely based on modified version of XEN hypervisor (EC2 gens 1-4)
- XEN provides its own CPU schedulers, I/O scheduling

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.32

32

TYPE 2 HYPERVISOR

- Adds additional layer

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.33

33

TYPE 2 HYPERVISOR

- Problem: Original x86 CPUs could not trap special instructions
- Instructions not specially marked
- Solution: Use Full Virtualization
- Trap ALL instructions
- "Fully" simulate entire computer
- Tradeoff: Higher Overhead
- Benefit: Can virtualize any operating system without modification

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.34

34

CHECK FOR VIRTUALIZATION SUPPORT

- See: <https://cyberciti.biz/faq/linux-xen-vmware-kvm-intel-vt-amd-v-support>
- # check for Intel VT CPU virtualization extensions on Linux
`grep -color vmx /proc/cpuinfo`
- # check for AMD V CPU virtualization extensions on Linux
`grep -color svm /proc/cpuinfo`
- Also see 'lscpu' -> "Virtualization:"
- Other Intel CPU features that help virtualization:
`ept vpid tpr_shadow flexpriority vnm`

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.35

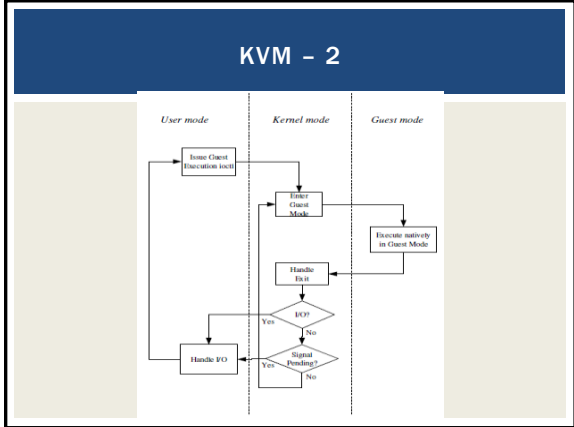

35

KERNEL BASED VIRTUAL MACHINES (KVM)

- x86 HW notoriously difficult to virtualize
- Extensions added to 64-bit Intel/AMD CPUs
 - Provides hardware assisted virtualization
 - New "guest" operating mode
 - Hardware state switch
 - Exit reason reporting
 - Intel/AMD implementations different
 - Linux uses vendor specific kernel modules

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.36

36

37

KVM - 3

- KVM has /dev/kvm device file node
 - Linux character device, with operations:
 - Create new VM
 - Allocate memory to VM
 - Read/write virtual CPU registers
 - Inject interrupts into vCPUs
 - Running vCPUs
- VMs run as Linux processes
 - Scheduled by host Linux OS
 - Can be pinned to specific cores with “taskset”

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.38

38

KVM PARAVIRTUALIZED I/O

- KVM - Virtio
 - Custom Linux based paravirtual device drivers
 - Supersedes QEMU hardware emulation (full virt.)
 - Based on XEN paravirtualized I/O
 - Custom block device driver provides paravirtual device emulation
 - Virtual bus (memory ring buffer)
 - Requires hypercall facility
 - Direct access to memory

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.39

39

KVM DIFFERENCES FROM XEN

- KVM requires CPU VMX support
 - Virtualization management extensions
- KVM can virtualize any OS without special kernels
 - Less invasive
- KVM was originally separate from the Linux kernel, but then integrated
- KVM is type 1 hypervisor because the machine boots Linux which has integrated support for virtualization
- Different than XEN because XEN kernel alone is not a full-fledged OS

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.40

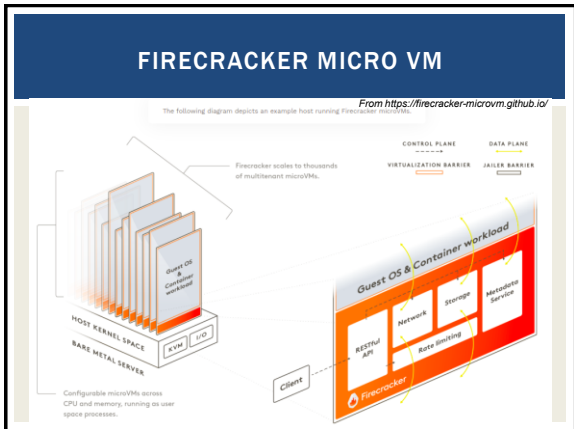

40

KVM ENHANCEMENTS

- Paravirtualized device drivers
 - Virtio
- Guest Symmetric Multiprocessor (SMP) support
 - Leverages multiple on-board CPUs
 - Supported as of Linux 2.6.23
- VM Live Migration
- Linux scheduler integration
 - Optimize scheduler with knowledge that KVM processes are virtual machines

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.41

41

42

FIRECRACKER MICRO VM

- Provides a virtual machine monitor (VMM) (i.e. hypervisor) using KVM to create and manage microVMs
- Has a minimalist design with goals to improve security, decreases the startup time, and increases hardware utilization
- Excludes unnecessary devices and guest functionality to reduce memory footprint and attack surface area of each microVM
- Supports boot time of <125ms, <5 MiB memory footprint
- Can run 100s of microVMs on a host, launching up to 150/sec
- Is available on 64-bit Intel, AMD, and Arm CPUs
- Used to host AWS Lambda and AWS Fargate
- Has been open sourced under the Apache 2.0 license

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L12.43

43

FIRECRACKER - 2

- **Minimalistic**
- MicroVMs run as separate processes on the host
- Only 5 emulated devices are available: virtio-net, virtio-block, virtio-sock, serial console, and a minimal keyboard controller used only to stop the microVM
- Rate limiters can be created and configured to provision resources to support bursts or specific bandwidth/operation limitations
- **Configuration**
- A RESTful API enables common actions such as configuring the number of vCPUs or launching microVMs
- A metadata service between the host and guest provides configuration information

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L12.44

44

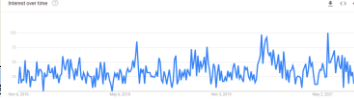

FIRECRACKER - 2

- **Security**
- Runs in user space (**not the root user**) on top of the Linux Kernel-based Virtual Machine (KVM) hypervisor to create microVMs
- Lambda functions, Fargate containers, or container groups can be encapsulated using Firecracker through KVM, enabling workloads from different customers to run on the same machine, without sacrificing security or efficiency
- MicroVMs are further isolated with common Linux user-space security barriers using a companion program called "jailer" which provides a second line of defense if KVM is compromised

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L12.45

45

UNIKERNELS

- Lightweight alternative to containers and VMs
- Custom Cloud Operating System
- Single process, multiple threads, runs one program
- Launch separately atop of hypervisor (XEN/KVM)
- Reduce overhead, duplication of heavy weight OS
- OSv is most well known unikernel
- Several others exist has research projects
- More information at: <http://unikernel.org/>
- Google Trends OSv → 

November 7, 2023 TCSS462/562 School of Eng L12.46

46

WE WILL RETURN AT ~4:50 PM

47

VIRTUALIZATION MANAGEMENT

- Virtual infrastructure management (VIM) tools
- Tools that manage pools of virtual machines, resources, etc.
- Private cloud software systems can be considered as a VIM
- Considerations:
- Performance overhead
 - Paravirtualization: custom OS kernels, I/O passed directly to HW w/ special drivers
- Hardware compatibility for virtualization
- Portability: virtual resources tend to be difficult to migrate cross-clouds

November 7, 2023 TCSS462/562: Software Engineering for Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma L12.48

48

VIRTUAL INFRASTRUCTURE MANAGEMENT (VIM)

- Middleware to manage virtual machines and infrastructure of IaaS “clouds”

- Examples
 - OpenNebula
 - Nimbus
 - Eucalyptus
 - OpenStack

November 7, 2023	TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L12.49
------------------	------------------------------------------------------------------------------------------------------------------------------------------------	--------

49

VIM FEATURES

- Create/destroy VM Instances
- Image repository
 - Create/Destroy/Update images
 - Image persistence

- Contextualization of VMs
 - Networking address assignment
 - DHCP / Static IPs
 - Manage SSH keys

November 7, 2023	TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L12.50
------------------	------------------------------------------------------------------------------------------------------------------------------------------------	--------

50

VIM FEATURES - 2

- Virtual network configuration/management
 - Public/Private IP address assignment
 - Virtual firewall management
 - Configure/support isolated VLANs (private clusters)

- Support common virtual machine managers (VMMs)
 - XEN, KVM, VMware
 - Support via libvirt library

November 7, 2023	TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L12.51
------------------	------------------------------------------------------------------------------------------------------------------------------------------------	--------

51

VIM FEATURES - 3

- Shared “Elastic” block storage
 - Facility to create/update/delete VM disk volumes
 - Amazon EBS
 - Eucalyptus SC
 - OpenStack Volume Controller

November 7, 2023	TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L12.52
------------------	------------------------------------------------------------------------------------------------------------------------------------------------	--------

52

CONTAINER ORCHESTRATION FRAMEWORKS

- Middleware to manage Docker application container deployments across virtual clusters of Docker hosts (VMs)
- Considered Infrastructure-as-a-Service

- **Open source**
 - Kubernetes framework
 - Docker swarm
 - Apache Mesos/Marathon

- **Proprietary**
 - Amazon Elastic Container Service

November 7, 2023	TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L12.53
------------------	------------------------------------------------------------------------------------------------------------------------------------------------	--------

53

CONTAINER SERVICES

- **Public cloud container cluster services**
 - Azure Kubernetes Service (AKS)
 - Amazon Elastic Container Service for Kubernetes (EKS)
 - Google Kubernetes Engine (GKE)

- **Container-as-a-Service**
 - Azure Container Instances (ACI – April 2018)
 - AWS Fargate (November 2017)
 - Google Kubernetes Engine Serverless Add-on (alpha-July 2018)

November 7, 2023	TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023] School of Engineering and Technology, University of Washington - Tacoma	L12.54
------------------	------------------------------------------------------------------------------------------------------------------------------------------------	--------

54

CLOUD ENABLING TECHNOLOGY

- Adapted from Ch. 5 from *Cloud Computing Concepts, Technology & Architecture*
- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.55

55

4. MULTITENANT APPLICATIONS

- Each tenant (like in an apartment) has their own view of the application
- Tenants are unaware of their neighbors
- Tenants can only access their data, no access to data and configuration that is not their own
- Customizable features
 - UI, business process, data model, access control
- Application architecture
 - User isolation, data security, recovery/backup by tenant, scalability for a tenant, for tenants, metered usage, data tier isolation

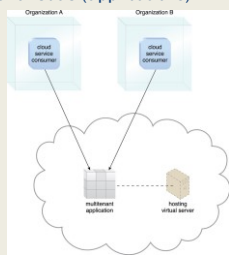

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.56

56

MULTITENANT APPS - 2

- Forms the basis for SaaS (applications)

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.57

57

CLOUD ENABLING TECHNOLOGY

- Adapted from Ch. 5 from *Cloud Computing Concepts, Technology & Architecture*
- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.58

58

5. WEB SERVICES/WEB

- Web services technology is a key foundation of cloud computing's "as-a-service" cloud delivery model
- SOAP – "Simple" object access protocol
 - First generation web services
 - WSDL – web services description language
 - UDDI – universal description discovery and integration
 - SOAP services have their own unique interfaces
- REST – instead of defining a custom technical interface REST services are built on the use of HTTP protocol
- HTTP GET, PUT, POST, DELETE

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.59

59

HYPERTEXT TRANSPORT PROTOCOL (HTTP)

- An ASCII-based request/reply protocol for transferring information on the web
- HTTP request includes:
 - request method (GET, POST, etc.)
 - Uniform Resource Identifier (URI)
 - HTTP protocol version understood by the client
 - headers—extra info regarding transfer request
- HTTP response from server
 - Protocol version & status code →
 - Response headers
 - Response body

HTTP status codes:
 2xx — all is well
 3xx — resource moved
 4xx — access problem
 5xx — server error

November 7, 2023 TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2023]
 School of Engineering and Technology, University of Washington - Tacoma L12.60

60

REST: REPRESENTATIONAL STATE TRANSFER

- Web services protocol
- *Supersedes SOAP* – Simple Object Access Protocol
- Access and manipulate web resources with a predefined set of stateless operations (known as web services)
- Requests are made to a URI
- Responses are most often in JSON, but can also be HTML, ASCII text, XML, no real limits as long as text-based
- HTTP verbs: GET, POST, PUT, DELETE, ...

REST CLIMATE SERVICES EXAMPLE

```

// REST/JSON
// Request climate data for Washington
{
  "parameter": [
    {
      "name": "latitude",
      "value": 47.2529
    },
    {
      "name": "longitude",
      "value": -122.4443
    }
  ]
}
    
```

65

REST - 2

- App manipulates one or more types of resources.
- Everything the app does can be characterized as some kind of operation on one or more resources.
- Frequently services are CRUD operations (create/read/update/delete)
 - Create a new resource
 - Read resource(s) matching criterion
 - Update data associated with some resource
 - Destroy a particular a resource
- Resources are often implemented as objects in OO languages

66

REST ARCHITECTURAL ADVANTAGES

- **Performance:** component interactions can be the dominant factor in user-perceived performance and network efficiency
- **Scalability:** to support large numbers of services and interactions among them
- **Simplicity:** of the Uniform Interface
- **Modifiability:** of services to meet changing needs (even while the application is running)
- **Visibility:** of communication between services
- **Portability:** of services by redeployment
- **Reliability:** resists failure at the system level as redundancy of infrastructure is easy to ensure
