### FEEDBACK FROM 10/31

- What exactly is a container in the context of container-as-aservice and what are some examples?
- Containers are a light-weight alternative to full virtual machines
- Instead of running a distinct operating system, containers share the Linux host by running containerized Linux environments, each with a distinct root file system
- Two key Linux features enable implementation of containers:
  - Control groups (cgroups)- limit and prioritize sharing of CPU, memory, block/network I/O resources
  - Namespaces hierarchical partitions of kernel resources (7 types): pid, mnt, ipc, user, net, UTS, cgroups
- Containers are introduced in Tutorial 7

L12.7

7

### TERM PROJECT PROPOSALS

- 18 Total term project proposals received
- 12 teams of 4, 3 teams of 3
- 2 teams of 2, 2 x 2-person teams merged
- 17 proposals reviewed first-round, 1 second-round pending
  - 13 proposals accepted
  - 4 proposals revisions requested
- Application Use Cases:
  - 10 TLQ pipelines
  - 5 image processing pipelines
  - 1 Data vs. model parallelism ML training w/ GPUs
  - 1 MapReduce on AWS Lambda, AWS ECS/Fargate

November 5, 2024

8

### AWS CLOUD CREDITS UPDATE

- AWS CLOUD CREDITS ARE NOW AVAILABLE FOR TCSS 462/562
- Credit codes must be securely exchanged
- Request codes by sending an email with the subject "AWS CREDIT REQUEST" to wlloyd@uw.edu
- Codes can also be obtained in person (or zoom), in the class, during the breaks, after class, during office hours, by appt
  - 57 credit requests fulfilled as of Nov 4 @ 11:59p
- Codes not provided using discord

November 5, 2024

L12.9

9

### **OBJECTIVES - 11/5**

- Questions from 10/31
- Tutorials Questions
- Class Presentations: Cloud Technology or Research Paper Review
- Ch. 5: Cloud Enabling Technology

November 5, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

L12.10

10

### TUTORIAL 0

- Getting Started with AWS
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutori als/TCSS462\_562\_f2024\_tutorial\_0.pdf
- Create an AWS account
- Create account credentials for working with the CLI
  - Associated required security policies for tutorial 3 & 4 (admin)
- Install awsconfig package
- Setup awsconfig for working with the AWS CLI

November 5, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

11

### **TUTORIAL 4 - DUE NOV 5**

- Introduction to AWS Lambda with the Serverless Application **Analytics Framework (SAAF)**
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutori als/TCSS462\_562\_f2024\_tutorial\_4.pdf
- Obtaining a Java development environment
- Introduction to Maven build files for Java
- Create and Deploy "hello" Java AWS Lambda Function
  - Creation of API Gateway REST endpoint
- Sequential testing of "hello" AWS Lambda Function
  - API Gateway endpoint

November 5, 2024

- AWS CLI Function invocation
- Observing SAAF profiling output
- Parallel testing of "hello" AWS Lambda Function with faas\_runner
- Performance analysis using faas\_runner reports
- Two function pipeline development task

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

112 12

12

### **TUTORIAL 5 - DUE NOV 14**

- Introduction to Lambda II: Working with Files in S3 and CloudWatch Events
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutori als/TCSS462\_562\_f2024\_tutorial\_5.pdf
- Customize the Request object (add getters/setters)
  Why do this instead of HashMap?
- Import dependencies (jar files) into project for AWS S3
- Create an S3 Bucket
- Give your Lambda function(s) permission to work with S3
- Write to the CloudWatch logs
- Use of CloudTrail to generate S3 events
- Creating CloudWatch rule to capture events from CloudTrail
- Have the CloudWatch rule trigger a target Lambda function with a static JSON input object (hard-coded filename)
- Optional: for the S3 PutObject event, dynamically extract the name of the file put to the S3 bucket for processing

November 5, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

L12.13

13

### **TUTORIAL 6**

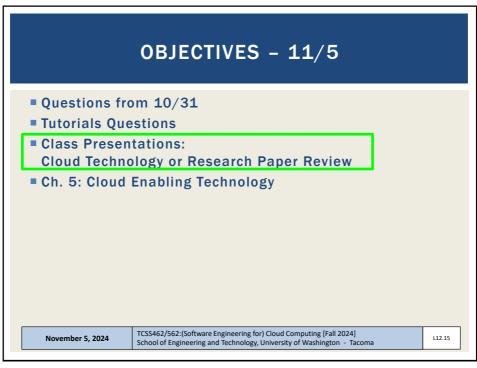

- Introduction to Lambda III: Serverless Databases
- To be posted...
- Create and use Sqlite databases using sqlite3 tool
- Deploy Lambda function with Sqlite3 database under /tmp
- Compare in-memory vs. file-based Sqlite DBs on Lambda
- Create an Amazon Aurora "Serverless" v2 MySQL database
- Using an ec2 instance in the same VPC (Region + availability zone) connect and interact with the database using the mysql CLI app
- Deploy an AWS Lambda function that uses the MySQL "serverless" database

November 5, 2024

## ■ TWO OPTIONS: ■ Cloud technology presentation ■ Cloud research paper presentation ■ Recent & suggested papers will be posted at: http://faculty.washington.edu/wlloyd/courses/tcss562/papers/ ■ Submit presentation type and topics (paper or technology) with desired dates of presentation via Canvas by: Sunday November 17<sup>th</sup> @ 11:59pm ■ Presentation dates ■ Tuesday November 26 (1-2 slots) ■ Tuesday December 3 (3-4 slots), Thursday December 5 (3-4 slots) November 5, 2024 | TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

16

17

### **EC2 VIRTUALIZATION - PARAVIRTUAL**

- 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup> generation → XEN-based
- 5<sup>th</sup> generation instances → AWS Nitro virtualization
- XEN two virtualization modes
- XEN Paravirtualization "paravirtual"
  - 10GB Amazon Machine Image base image size limit
  - Addressed poor performance of old XEN HVM mode
  - I/O performed using special XEN kernel with XEN paravirtual mode optimizations for better performance
  - Requires OS to have an available paravirtual kernel
  - PV VMs: will use common <u>AKI</u> files on AWS Amazon kernel Image(s)
    - Look for common identifiers

November 5, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

L12.18

18

### **EC2 VIRTUALIZATION - HVM**

- XEN HVM mode
  - Full virtualization no special OS kernel required
  - Computer entirely simulated
  - MS Windows runs in "hvm" mode
  - Allows work around: 10GB instance store root volume limit
  - Kernel is on the root volume (under /boot)
  - No AKIs (kernel images)
  - Commonly used today (EBS-backed instances)

November 5, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

L12.19

19

### **EC2 VIRTUALIZATION - NITRO**

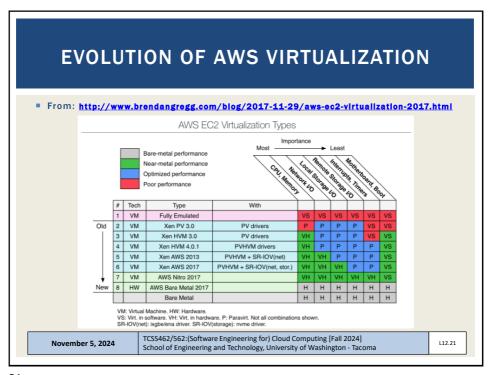

- Nitro based on Kernel-based-virtual-machines
  - Stripped down version of Linux KVM hypervisor
  - Uses KVM core kernel module
  - I/O access has a direct path to the device
- Goal: provide indistinguishable performance from bare metal

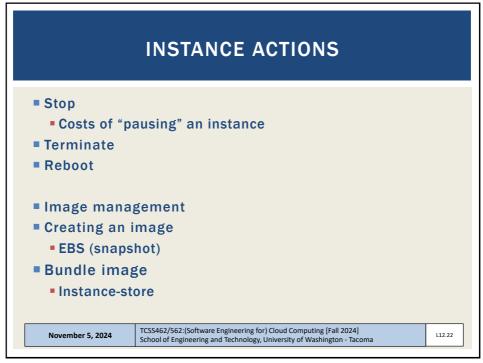

November 5, 2024

### INSPECTING INSTANCE INFORMATION EC2 VMs run a local metadata service Can query instance metadata to self discover cloud config attributes Version 2 (default) of the metadata service requires a token Get Token: TOKEN=`curl -X PUT "http://169.254.169.254/latest/api /token" -H "X-aws-ec2-metadata-token-ttl-seconds: 21600"` Find your instance ID: curl -H "X-aws-ec2-metadata-token: \$TOKEN" http://169.254.169.254/ curl -H "X-aws-ec2-metadata-token: \$TOKEN" http://169.254.169.254/latest/ curl -H "X-aws-ec2-metadata-token: \$TOKEN" http://169.254.169.254/latest/meta-data/ curl -H "X-aws-ec2-metadata-token: \$TOKEN" http://169.254.169.254/latest/meta-data/instance-id; echo See: https://docs.aws.amazon.com/AWSEC2/latest/UserGuide/configuring-instance-metadata-service.html#instance-metadata-retrieval-examples TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma November 5, 2024

26

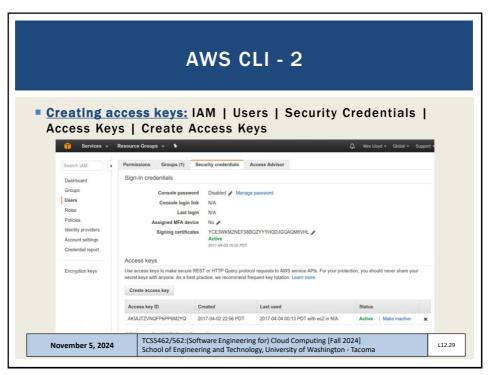

### SIMPLE STORAGE SERVICE (S3) Rey-value blob storage What is the difference vs. key-value stores (NoSQL DB)? Can mount an S3 bucket as a volume in Linux Supports common file-system operations Provides eventual consistency Can store Lambda function state for life of container.

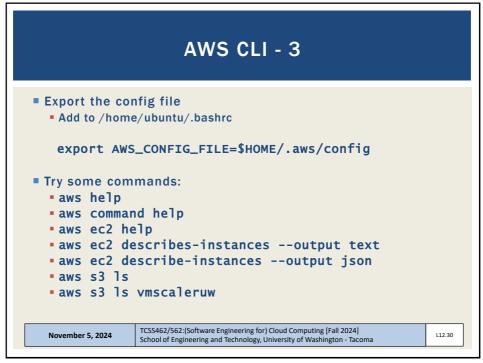

School of Engineering and Technology, University of Washington - Tacoma

27

# AWS CLI Launch Ubuntu 16.04 VM Instances | Launch Instance Install the general AWS CLI Sudo apt install awscli Create config file [default] aws\_access\_key\_id = <access key id>aws\_access\_key\_id = <access key id>aws\_secret\_access\_key = <secret access key>region = us-east-1

28

30

### LEGACY / SERVICE SPECIFIC CLI(S)

- sudo apt install ec2-api-tools
- Provides more concise output
- Additional functionality
- Define variables in .bashrc or another sourced script:
- export AWS\_ACCESS\_KEY={your access key}
- export AWS\_SECRET\_KEY={your secret key}
- ec2-describe-instances
- ec2-run-instances
- ec2-request-spot-instances
- EC2 management from Java:
- http://docs.aws.amazon.com/AWSJavaSDK/latest/javad oc/index.html
- Some AWS services have separate CLI installable by package

November 5, 2024

L12.31

31

### **AMI TOOLS**

- Amazon Machine Images tools
- For working with disk volumes
- Can create live copies of any disk volume
  - Your local laptop, ec2 root volume (EBS), ec2 ephemeral disk
- Installation:

https://docs.aws.amazon.com/AWSEC2/latest/UserGuide/ami-tools-commands.html

- AMI tools reference:
- https://docs.aws.amazon.com/AWSEC2/latest/UserGuide/ami -tools-commands.html
- Some functions may require private key & certificate files

November 5, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

.12.32

32

### PRIVATE KEY AND CERTIFICATE FILE

- Install openssl package on VM
- # generate private key file \$openssl genrsa 2048 > mykey.pk
- # generate signing certificate file \$openssl req -new -x509 -nodes -sha256 -days 36500 -key mykey.pk -outform PEM -out signing.cert
- Add signing.cert to IAM | Users | Security Credentials | -- new signing certificate --
- From: http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/set-up-ami-tools.html?icmpid=docs\_iam\_console#ami-tools-create-certificate

November 5, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

L12.33

33

### PRIVATE KEY, CERTIFICATE FILE

- These files, combined with your AWS\_ACCESS\_KEY and AWS\_SECRET\_KEY and AWS\_ACCOUNT\_ID enable you to publish new images from the CLI
- Objective:
- 1. Configure VM with software stack
- 2. Burn new image for VM replication (horizontal scaling)
- An alternative to bundling volumes and storing in S3 is to use a containerization tool such as Docker. . .
- Create image script . . .

### **COST SAVINGS MEASURES**

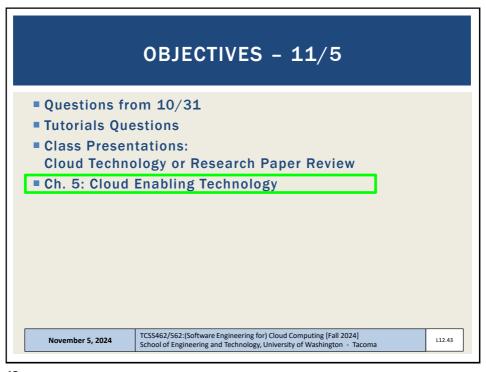

- From Tutorial 3:
- #1: ALWAYS USE SPOT INSTANCES FOR COURSE/RESEARCH RELATED PROJECTS
- #2: NEVER LEAVE AN EBS VOLUME IN YOUR ACCOUNT THAT IS NOT ATTACHED TO A RUNNING VM
- #3: BE CAREFUL USING PERSISTENT REQUESTS FOR SPOT INSTANCES
- #4: TO SAVE/PERSIST DATA, USE EBS SNAPSHOTS AND THEN
- #5: DELETE EBS VOLUMES FOR TERMINATED EC2 INSTANCES.
- #6: UNUSED SNAPSHOTS AND UNUSED EBS VOLUMES SHOULD BE PROMPTLY DELETED !!
- #7: USE PERSISTENT SPOT REQUESTS AND THE "STOP" FEATURE TO PAUSE VMS DURING SHORT BREAKS

## CLOUD ENABLING TECHNOLOGY Adapted from Ch. 5 from Cloud Computing Concepts, Technology & Architecture Broadband networks and internet architecture Data center technology Virtualization technology Multitenant technology Web/web services technology TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

45

46

48

### INTERNETWORKING KEY POINTS

- Cloud consumers and providers typically communicate via the internet
- Decentralized provisioning and management model is not controlled by the cloud consumers or providers
- Inter-networking (internet) relies on connectionless packet switching and route-based interconnectivity
- Routers and switches support communication
- Network bandwidth and latency influence QoS, which is heavily impacted by network congestion

50

52

### DATA CENTER TECHNOLOGY - KEY COMPONENTS

- Remote operation / management
- High availability support: \*\*redundant everything\*\* Includes: power supplies, cabling, environmental control systems, communication links, duplicate warm replica HW
- Secure design: physical and logical access control
- Servers: rackmount, etc.
- **Storage**: hard disk arrays (RAID)
- storage area network (SAN): disk array w/ multiple servers (individual nodes w/ disks) and a dedicated network
- network attached storage (NAS): inexpensive single node with collection of disks, provides shared filesystems, for NFS, etc.
- Network hardware: backbone routers (WAN to LAN connectivity), firewalls, VPN gateways, managed switches/routers

L12.54

54

### 3. VIRTUALIZATION TECHNOLOGY

- Convert a physical IT resource into a virtual IT resource
- Servers, storage, network, power (virtual UPSs)
- Virtualization supports:
  - Hardware independence
  - Server consolidation
  - Resource replication
  - Resource pooling
  - Elastic scalability
- Virtual servers
  - Operating-system based virtualization
  - Hardware-based virtualization

November 5, 2024

58

### **ABSTRACTION CONCERNS - 2**

### Isolation

- From others:
   What user A does should not impact user B in any noticeable way
- Security
  - User A and user B's data should be always separate
  - User A's actions are not perceivable by User B

November 5, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

L12.59

59

### TYPES OF ABSTRACTION IN THE CLOUD

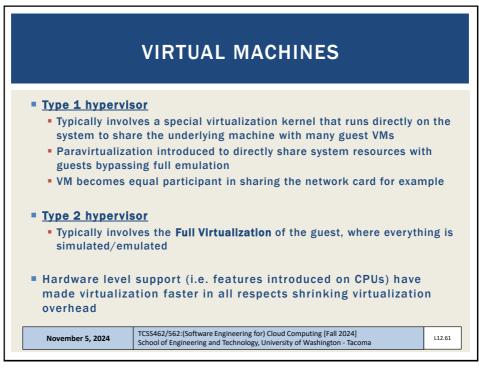

- Virtual Machines original laaS cloud abstraction
- OS and Application Containers seen with CaaS
  - OS Container replacement for VM, mimics full OS instance, heavier
  - OS containers run 100s of processes just like a VM
  - App Container Docker: packages dependencies to easily transport and run an application anywhere
  - Application containers run only a few processes
- Micro VMs FaaS / CaaS
  - Lighter weight alternative to full VM (KVM, XEN, VirtualBox)
  - Firecracker
- Unikernel Operating Systems research mostly
  - Single process, multi-thread operating system
  - Designed for cloud, objective to reduce overhead of running too many OS instances

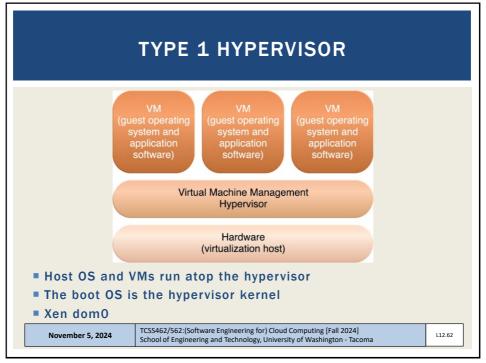

November 5, 2024

L12.60

60

62

### TYPE 1 HYPERVISOR

- Acts as a control program
- Miniature OS kernel that manages VMs
- Boots and runs on bare metal
- Also known as Virtual Machine Monitor (VMM)
- Paravirtualization: Kernel includes I/O drivers
- VM guest OSes must use special kernel to interoperate
- Paravirtualization provides hooks to the guest VMs
- Kernel traps instructions (i.e. device I/O) to implement sharing & multiplexing
- User mode instructions run directly on the CPU
- Objective: minimize virtualization overhead
- Classic example is XEN (dom0 kernel)

November 5, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

L12.63

63

### COMMON VMMS: PARAVIRTUALIZATION

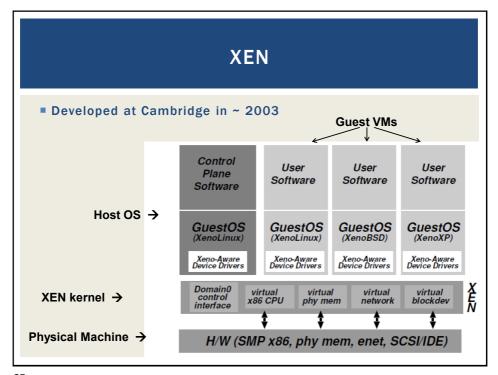

- TYPE 1 Hypervisor
- XEN
- Citrix Xen-server (a commercial version of XEN)
- VMWare ESXi
- KVM (virtualization support in kernel)
- Paravirtual I/O drivers introduced
  - XEN
  - KVM
  - Virtualbox

### TYPE 2 HYPERVISOR

- Problem: Original x86 CPUs could not trap special instructions
- Instructions not specially marked
- Solution: Use Full Virtualization
- Trap ALL instructions
- "Fully" simulate entire computer
- Tradeoff: Higher Overhead
- Benefit: Can virtualize any operating system without modification

# KVM - 3 KVM has /dev/kvm device file node Linux character device, with operations: Create new VM Allocate memory to VM Read/write virtual CPU registers Inject interrupts into vCPUs Running vCPUs VMs run as Linux processes Scheduled by host Linux OS Can be pinned to specific cores with "taskset" November 5, 2024 TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

73

# KVM PARAVIRTUALIZED I/O • KVM - Virtio • Custom Linux based paravirtual device drivers • Supersedes QEMU hardware emulation (full virt.) • Based on XEN paravirtualized I/O • Custom block device driver provides paravirtual device emulation • Virtual bus (memory ring buffer) • Requires hypercall facility • Direct access to memory November 5, 2024 | TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] | School of Engineering and Technology, University of Washington - Tacoma

74

## KVM DIFFERENCES FROM XEN

- KVM requires CPU VMX support
  - Virtualization management extensions
- KVM can virtualize any OS without special kernels
  - Less invasive
- KVM was originally separate from the Linux kernel, but then integrated
- KVM is type 1 hypervisor because the machine boots Linux which has integrated support for virtualization
- Different than XEN because XEN kernel alone is not a full-fledged OS

November 5, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

L12.75

75

### **KVM ENHANCEMENTS**

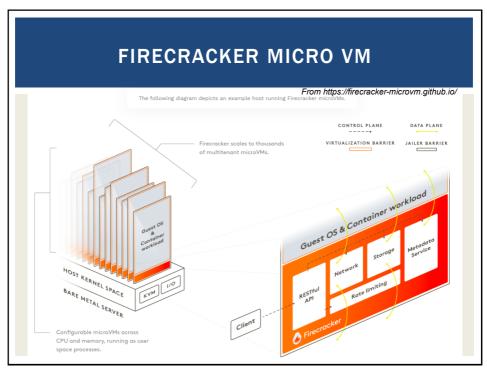

- Paravirtualized device drivers
  - Virtio
- Guest Symmetric Multiprocessor (SMP) support
  - Leverages multiple on-board CPUs
  - Supported as of Linux 2.6.23
- VM Live Migration
- Linux scheduler integration
  - Optimize scheduler with knowledge that KVM processes are virtual machines

L12.76

76

### FIRECRACKER MICRO VM

- Provides a virtual machine monitor (VMM) (i.e. hypervisor) using KVM to create and manage microVMs
- Has a minimalist design with goals to improve security, decreases the startup time, and increases hardware utilization
- Excludes unnecessary devices and guest functionality to reduce memory footprint and attack surface area of each microVM
- Supports boot time of <125ms, <5 MiB memory footprint</p>
- Can run 100s of microVMs on a host, launching up to 150/sec
- Is available on 64-bit Intel, AMD, and Arm CPUs
- Used to host AWS Lambda and AWS Fargate
- Has been open sourced under the Apache 2.0 license

November 5, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

L12.78

78

# FIRECRACKER - 2

- Minimalistic
- MicroVMs run as separate processes on the host
- Only 5 emulated devices are available: virtio-net, virtio-block, virtio-vsock, serial console, and a minimal keyboard controller used only to stop the microVM
- Rate limiters can be created and configured to provision resources to support bursts or specific bandwidth/operation limitations
- Configuration
- A RESTful API enables common actions such as configuring the number of vCPUs or launching microVMs
- A metadata service between the host and guest provides configuration information

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma

L12.79

79

## FIRECRACKER - 2

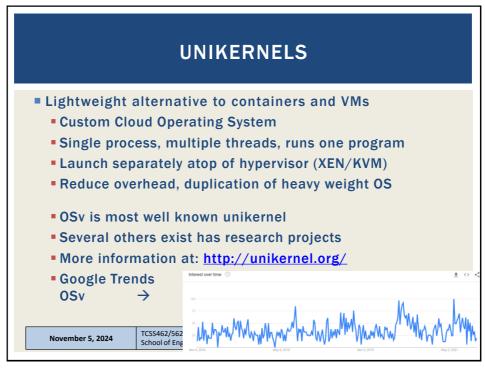

- Security
- Runs in user space (not the root user) on top of the Linux Kernel-based Virtual Machine (KVM) hypervisor to create microVMs
- Lambda functions, Fargate containers, or container groups can be encapsulated using Firecracker through KVM, enabling workloads from different customers to run on the same machine, without sacrificing security or efficiency
- MicroVMs are further isolated with common Linux user-space security barriers using a companion program called "jailer" which provides a second line of defense if KVM is compromised

## 5. WEB SERVICES/WEB

- Web services technology is a key foundation of cloud computing's "as-a-service" cloud delivery model
- SOAP "Simple" object access protocol
  - First generation web services
  - WSDL web services description language
  - UDDI universal description discovery and integration
  - SOAP services have their own unique interfaces
- REST instead of defining a custom technical interface REST services are built on the use of HTTP protocol
- HTTP GET, PUT, POST, DELETE

November 5, 2024

L12.94

94

# HYPERTEXT TRANSPORT PROTOCOL (HTTP)

- An ASCII-based request/reply protocol for transferring information on the web
- HTTP request includes:
  - request method (GET, POST, etc.)
  - Uniform Resource Identifier (URI)
  - HTTP protocol version understood by the client
  - headers—extra info regarding transfer request
- HTTP response from server
  - Protocol version & status code →
  - Response headers
  - Response body

HTTP status codes:

2xx — all is well

3xx — resource moved 4xx — access problem

5--- ------

5xx — server error

L12.95

95

### **REST: REPRESENTATIONAL STATE TRANSFER**

- Web services protocol
- Supersedes SOAP Simple Object Access Protocol
- Access and manipulate web resources with a predefined set of stateless operations (known as web services)
- Requests are made to a URI
- Responses are most often in JSON, but can also be HTML, ASCII text, XML, no real limits as long as text-based
- HTTP verbs: GET, POST, PUT, DELETE, ...

# REST - 2

- App manipulates one or more types of resources.
- Everything the app does can be characterized as some kind of operation on one or more resources.
- Frequently services are CRUD operations (create/read/update/delete)
  - Create a new resource
  - Read resource(s) matching criterion
  - Update data associated with some resource
  - Destroy a particular a resource
- Resources are often implemented as objects in 00 languages

101

## **REST ARCHITECTURAL ADVANTAGES**

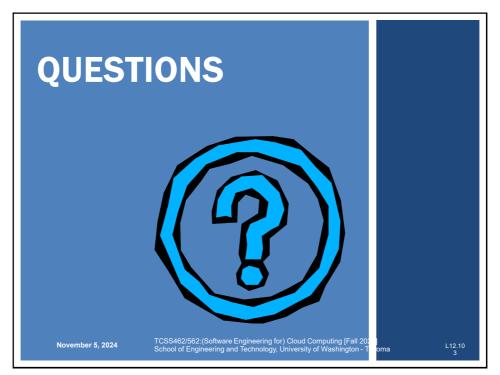

- Performance: component interactions can be the dominant factor in user-perceived performance and network efficiency
- Scalability: to support large numbers of services and interactions among them
- Simplicity: of the Uniform Interface
- Modifiability: of services to meet changing needs (even while the application is running)
- Visibility: of communication between services
- Portability: of services by redeployment
- Reliability: resists failure at the system level as redundancy of infrastructure is easy to ensure
