

OFFICE HOURS – FALL 2024

- **THIS WEEK**
- Campus is closed next Monday November 11, due to the Veteran’s Day holiday
- **Tuesdays:**
 - 2:30 to 3:30 pm - CP 229
- ***** Friday *****
 - 11:00 am to 12:00 pm – via Zoom
- Or email for appointment

> Office Hours set based on Student Demographics survey feedback

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.2
------------------	---	-------

2

OBJECTIVES – 11/7

- Questions from 11/7
- Tutorials Questions
- Class Presentations:
 - Cloud Technology or Research Paper Review
- Ch. 5: Cloud Enabling Technology
- Tutorial 5 Demo

4

TCSS 562 - Online Daily Feedback Survey - 10/5

Started: Oct 7 at 1:13am

Quiz Instructions

Question 1 0.5 pts

On a scale of 1 to 10, please classify your perspective on material covered in today's class:

1	2	3	4	5	6	7	8	9	10
Mostly Review To Me				Equal New and Review					Mostly New to Me

Question 2 0.5 pts

Please rate the pace of today's class:

1	2	3	4	5	6	7	8	9	10
Slow				Just Right					Fast

November 7, 2024TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - TacomaL13.5

5

MATERIAL / PACE

- Please classify your perspective on material covered in today's class (**50** respondents):
 - 1-mostly review, 5-equal new/review, 10-mostly new
 - **Average - 5.42** (↓ - *previous 5.93*)

- Please rate the pace of today's class:
 - 1-slow, 5-just right, 10-fast
 - **Average - 5.39** (↑ - *previous 5.30*)

- **Response rates:**
 - TCSS 462: 24/42 - 57.14%
 - TCSS 562: 12/20 - 60.00%

------------------	---	-------

7

AWS CLOUD CREDITS UPDATE

- AWS CLOUD CREDITS ARE NOW AVAILABLE FOR TCSS 462/562
- Credit codes must be securely exchanged
- Request codes by sending an email with the subject “AWS CREDIT REQUEST” to wllloyd@uw.edu
- Codes can also be obtained in person (or zoom), in the class, during the breaks, after class, during office hours, by appt
 - 57 credit requests fulfilled as of Nov 6 @ 11:59p
- Codes not provided using discord

**Don't Forget to Terminate (Shutdown)
all EC2 instances for Tutorials 3**

**Spot instances:
c5d.large instance @ ~3.2 cents / hour**

**\$0.78 / day
\$5.48 / week
\$23.78 / month
\$285.42 / year**

AWS CREDITS → → → → → → → →

10

TUTORIAL 4 – DUE NOV 5

- Introduction to AWS Lambda with the Serverless Application Analytics Framework (SAAF)
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2024_tutorial_4.pdf
- Obtaining a Java development environment
- Introduction to Maven build files for Java
- Create and Deploy “hello” Java AWS Lambda Function
 - Creation of API Gateway REST endpoint
- Sequential testing of “hello” AWS Lambda Function
 - API Gateway endpoint
 - AWS CLI Function invocation
- Observing SAAF profiling output
- Parallel testing of “hello” AWS Lambda Function with faas_runner
- Performance analysis using faas_runner reports
- Two function pipeline development task

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.11
------------------	---	--------

11

TUTORIAL 4 - NOTES

- Sometimes students get unexpected results when adding **Thread.sleep(10000)** to the hello Lambda function:
- It is possible that:
 1. Results from the SAAF Report Generator were from a test run before the **Thread.Sleep()** statement was added to the code
- OR -
 2. The **Thread.Sleep()** statement was added in the incorrect location of the code
- OR -
 3. When opening the CSV output from the Report Generator, the file separator characters were set incorrectly.
- The only separator for a CSV file is the comma ","
Be sure to correctly open the CSV file in the spreadsheet.
Columns can be offset resulting in the wrong answers being provided for Question 6.

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.12

12

TUTORIAL 4 - NOTES - 2

- The sleep statement must go between the **START FUNCTION** and **END FUNCTION** comments in the **handleRequest()** method specified as the AWS Lambda function's handler under runtime settings in the AWS Lambda GUI.

```
//*****START FUNCTION IMPLEMENTATION*****  
    try  
    {  
        Thread.sleep(10000);  
    }  
    catch (InterruptedException ie)  
    {  
        System.out.println("Interruption occurred while sleeping.");  
    }  
//*****END FUNCTION IMPLEMENTATION*****
```

- Code must be recompiled and redeployed after modification

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.13

13

TUTORIAL 4 – NOTES - 3

- **SANITY CHECK:** consider that adding 10 seconds of sleep to your AWS Lambda function will cause the function to run for at least 10 seconds. This will impact the outputs requested for Question 6:
- **avg_runtime** is the server-side (cloud) runtime of the function
- This is the time it takes for the function to run on AWS Lambda (cloud)
- Adding sleep of 10 seconds should increase a function's **avg_runtime**
- **avg_roundTripTime** is the total time for a request from a client (laptop?) to travel to the server (cloud), make the function call, and return.
- If trying to make 50 calls at once on a laptop with a small # of CPU cores this time may be slow
- Adding sleep of 10 seconds should increase a function's **avg_roundTripTime**

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.14

14

TUTORIAL 4 – NOTES - 4

- **avg_cpudleDelta** time is the amount of time the Lambda function's Firecracker two vCPUs are idle during the function call on the server measured in centiseconds:

100 centiseconds = 1 second

100 centiseconds = 1000 milliseconds

- By default, AWS Lambda functions with 512 MB run in a runtime environment with access to two vCPU cores
- This is the total vCPU idle time for both cores (it is doubled)
- Adding sleep of 10 seconds should increase your function's **avg_cpudleDelta**
- **How much should avg_cpudleDelta increase ?**

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.15

15

TUTORIAL 5 – DUE NOV 14

- Introduction to Lambda II: Working with Files in S3 and CloudWatch Events
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2024_tutorial_5.pdf
- Customize the Request object (add getters/setters)
 - Why do this instead of HashMap ?
- Import dependencies (jar files) into project for AWS S3
- Create an S3 Bucket
- Give your Lambda function(s) permission to work with S3
- Write to the CloudWatch logs
- Use of CloudTrail to generate S3 events
- Creating CloudWatch rule to capture events from CloudTrail
- Have the CloudWatch rule trigger a target Lambda function with a static JSON input object (hard-coded filename)
- **Optional:** for the S3 PutObject event, dynamically extract the name of the file put to the S3 bucket for processing

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.16

16

TUTORIAL 6

- Introduction to Lambda III: Serverless Databases
- To be posted...

- Create and use Sqlite databases using sqlite3 tool
- Deploy Lambda function with Sqlite3 database under /tmp
- Compare in-memory vs. file-based Sqlite DBs on Lambda
- Create an Amazon Aurora “Serverless” v2 MySQL database
- Using an ec2 instance in the same VPC (Region + availability zone) connect and interact with the database using the mysql CLI app
- Deploy an AWS Lambda function that uses the MySQL “serverless” database

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.17

17

TUTORIAL 7

- Introduction to Docker
- To be posted

- Must complete using Ubuntu 22.04 (for cgroups v2)
- Use DOCX file for copying and pasting Docker install commands
- Topics:
 - Installing Docker
 - Creating a container using a Dockerfile
 - Using cgroups virtual filesystem to monitor CPU utilization of a container
 - Persisting container images to Docker Hub image repository
 - Container vertical scaling of CPU/memory resources
 - Testing container CPU and memory isolation

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.18

18

TUTORIAL COVERAGE

- Docker CLI → Docker Engine (dockerd) → containerd → runc

- Working with the docker CLI:
 - docker run create a container
 - docker ps -a list containers, find CONTAINER ID
 - docker exec --it run a process in an existing container
 - docker stop stop a container
 - docker kill kill a container
 - docker help list available commands
 - man docker Docker Linux manual pages

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.19

19

```
Commands:
attach      Attach local standard input, output, and error streams to a running container
build      Build an image from a Dockerfile
commit     Create a new image from a container's changes
cp         Copy files/folders between a container and the local filesystem
create     Create a new container
deploy     Deploy a new stack or update an existing stack
diff       Inspect changes to files or directories on a container's filesystem
events     Get real time events from the server
exec       Run a command in a running container
export     Export a container's filesystem as a tar archive
history    Show the history of an image
images     List images
import     Import the contents from a tarball to create a filesystem image
info       Display system-wide information
inspect    Return low-level information on Docker objects
kill       Kill one or more running containers
load       Load an image from a tar archive or STDIN
login      Log in to a Docker registry
logout     Log out from a Docker registry
logs       Fetch the logs of a container
pause     Pause all processes within one or more containers
port       List port mappings or a specific mapping for the container
ps         List containers
pull       Pull an image or a repository from a registry
push       Push an image or a repository to a registry
rename     Rename a container
restart    Restart one or more containers
rm         Remove one or more containers
rmi        Remove one or more images
run        Run a command in a new container
save       Save one or more images to a tar archive (streamed to STDOUT by default)
search     Search the Docker Hub for images
start     Start one or more stopped containers
stats     Display a live stream of container(s) resource usage statistics
stop       Stop one or more running containers
tag        Create a tag TARGET_IMAGE that refers to SOURCE_IMAGE
top        Display the running processes of a container
unpause   Unpause all processes within one or more containers
update    Update configuration of one or more containers
version    Show the Docker version information
wait      Block until one or more containers stop, then print their exit codes
```

Docker CLI

20

TUTORIAL 7

- Tutorial introduces use of two common Linux performance benchmark applications
 - stress-ng
 - 100s of CPU, memory, disk, network stress tests
- Sysbench
 - Used in tutorial for memory stress test

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.21

21

OBJECTIVES - 11/7

- Questions from 11/7
- Tutorials Questions
- **Class Presentations:
Cloud Technology or Research Paper Review**
- Ch. 5: Cloud Enabling Technology
- Tutorial 5 Demo

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.22

22

GROUP PRESENTATION

- **TWO OPTIONS:**
- *Cloud technology presentation*
- *Cloud research paper presentation*
 - Recent & suggested papers will be posted at:
<http://faculty.washington.edu/wlloyd/courses/tcss562/papers/>
- **Submit presentation type and topics (paper or technology) with desired dates of presentation via Canvas by:
*Sunday November 17th @ 11:59pm***
- **Presentation dates:**
 - Tuesday November 26
 - Tuesday December 3*, Thursday December 5
 - * - day of quiz 2. only 1 presentation slot

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.23
------------------	---	--------

23

24

INSPECTING INSTANCE INFORMATION

- EC2 VMs run a local metadata service
- Can query instance metadata to self discover cloud config attributes
- **Version 2 (default) of the metadata service requires a token**
- Get Token:

```
TOKEN=`curl -X PUT "http://169.254.169.254/latest/api /token" -H "X-aws-ec2-metadata-token-ttl-seconds: 21600"
```
- Find your instance ID:

```
curl -H "X-aws-ec2-metadata-token: $TOKEN" http://169.254.169.254/  
  
curl -H "X-aws-ec2-metadata-token: $TOKEN"  
http://169.254.169.254/latest/  
  
curl -H "X-aws-ec2-metadata-token: $TOKEN"  
http://169.254.169.254/latest/meta-data/  
  
curl -H "X-aws-ec2-metadata-token: $TOKEN"  
http://169.254.169.254/latest/meta-data/instance-id ; echo
```

See: <https://docs.aws.amazon.com/AWSEC2/latest/UserGuide/configuring-instance-metadata-service.html#instance-metadata-retrieval-examples>

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.25
------------------	---	--------

25

SIMPLE STORAGE SERVICE (S3)

- Key-value blob storage
- What is the difference vs. key-value stores (NoSQL DB)?
- Can mount an S3 bucket as a volume in Linux
 - Supports common file-system operations
- Provides eventual consistency
- Can store Lambda function state for life of container.

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.26

26

AWS CLI

- Launch Ubuntu 16.04 VM
 - Instances | Launch Instance
- Install the general AWS CLI
 - `sudo apt install awscli`
- Create config file

```
[default]
aws_access_key_id = <access key id>
aws_secret_access_key = <secret access key>
region = us-east-1
```

November 7, 2024

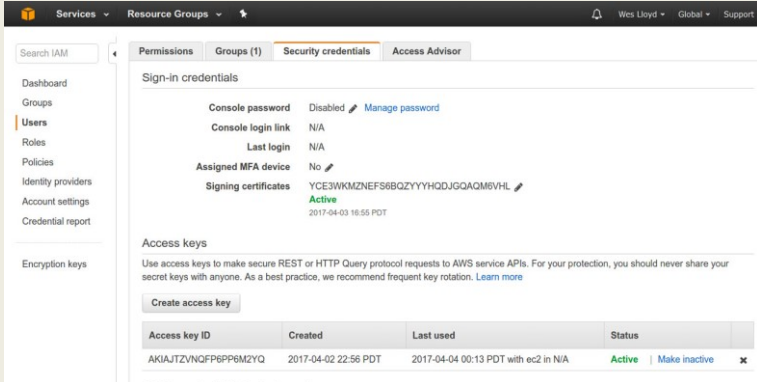

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.27

27

AWS CLI - 2

- **Creating access keys:** IAM | Users | Security Credentials | Access Keys | Create Access Keys

Access key ID	Created	Last used	Status
AKIAJZVNQFP6PP6MZYQ	2017-04-02 22:56 PDT	2017-04-04 00:13 PDT with ec2 in N/A	Active Make inactive ✕

November 7, 2024 | TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma | L13.28

28

AWS CLI - 3

- **Export the config file**
 - Add to `/home/ubuntu/.bashrc`

```
export AWS_CONFIG_FILE=$HOME/.aws/config
```
- **Try some commands:**
 - `aws help`
 - `aws command help`
 - `aws ec2 help`
 - `aws ec2 describes-instances --output text`
 - `aws ec2 describe-instances --output json`
 - `aws s3 ls`
 - `aws s3 ls vmscaleruw`

November 7, 2024 | TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma | L13.29

29

LEGACY / SERVICE SPECIFIC CLI(S)

- `sudo apt install ec2-api-tools`
- Provides more concise output
- Additional functionality
- Define variables in `.bashrc` or another sourced script:
 - `export AWS_ACCESS_KEY={your access key}`
 - `export AWS_SECRET_KEY={your secret key}`
- `ec2-describe-instances`
- `ec2-run-instances`
- `ec2-request-spot-instances`
- EC2 management from Java:
 - <http://docs.aws.amazon.com/AWSJavaSDK/latest/javadoc/index.html>
- Some AWS services have separate CLI installable by package

November 7, 2024

School of Engineering and Technology, University of Washington - Tacoma

L13.31

31

PRIVATE KEY AND CERTIFICATE FILE

- Install openssl package on VM

```
# generate private key file
```

```
$openssl genrsa 2048 > mykey.pk
```

```
# generate signing certificate file
```

```
$openssl req -new -x509 -nodes -sha256 -days 36500 -key  
mykey.pk -outform PEM -out signing.cert
```

- Add signing.cert to IAM | Users | Security Credentials |
- - *new signing certificate* - -

- From: http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/setup-ami-tools.html?icmpid=docs_iam_console#ami-tools-create-certificate

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.32

32

PRIVATE KEY, CERTIFICATE FILE

- These files, combined with your `AWS_ACCESS_KEY` and `AWS_SECRET_KEY` and `AWS_ACCOUNT_ID` enable you to publish new images from the CLI

- Objective:

1. Configure VM with software stack
2. Burn new image for VM replication (**horizontal scaling**)

- An alternative to bundling volumes and storing in S3 is to use a containerization tool such as Docker. . .

- Create image script . . .

PARTITION THE DISK

Welcome to fdisk (util-linux 2.34).

Command (m for help): **n**

Partition type

- p primary (0 primary, 0 extended, 4 free)
- e extended (container for logical partitions)

Select (default p): **p**

Partition number (1-4, default 1): **1**

First sector (2048-97656249, default 2048): **2048**

Last sector, +/-sectors or +/-size{K,M,G,T,P} (2048-97656249, default 97656249): **2459648**

Created a new partition 1 of type 'Linux' and of size 1.2 GiB.

Command (m for help): **t**

Selected partition **1**

Hex code (type L to list all codes): **83**

Changed type of partition 'Linux' to 'Linux'.

Command (m for help): **w (to write and exit)**

COPY DATA TO NEW DISK PARTITION

```
# now check if the partition has been created.
# it should be listed as /dev/nvme1n1p1:
ls /dev/nvme1n1*

# now copy the data to the partition
sudo dd if=vhd.img of=/dev/nvme1n1p1

# mount the disk
sudo mount /dev/nvme1n1p1 /mnt

# and check if the hello file is there
cat /mnt/hello.txt

# we were able to copy the disk image to the cloud
# and we never had to format the cloud disk
# this examples copies a filesystem from a local disk
# to the cloud disk
```

40

COST SAVINGS MEASURES

- ***From Tutorial 3:***
- **#1: ALWAYS USE SPOT INSTANCES FOR COURSE/RESEARCH RELATED PROJECTS**
- **#2: NEVER LEAVE AN EBS VOLUME IN YOUR ACCOUNT THAT IS NOT ATTACHED TO A RUNNING VM**
- **#3: BE CAREFUL USING PERSISTENT REQUESTS FOR SPOT INSTANCES**
- **#4: TO SAVE/PERSIST DATA, USE EBS SNAPSHOTS AND THEN**
- **#5: DELETE EBS VOLUMES FOR TERMINATED EC2 INSTANCES.**
- **#6: UNUSED SNAPSHOTS AND UNUSED EBS VOLUMES SHOULD BE PROMPTLY DELETED !!**
- **#7: USE PERSISTENT SPOT REQUESTS AND THE “STOP” FEATURE TO PAUSE VMS DURING SHORT BREAKS**

OBJECTIVES - 11/7

- Questions from 11/7
- Tutorials Questions
- Class Presentations:
Cloud Technology or Research Paper Review
- **Ch. 5: Cloud Enabling Technology**
- Tutorial 5 Demo

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.42
------------------	---	--------

42

CLOUD ENABLING TECHNOLOGY

43

CLOUD ENABLING TECHNOLOGY

- *Adapted from Ch. 5 from Cloud Computing Concepts, Technology & Architecture*
- **Broadband networks and internet architecture**
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.44
------------------	---	--------

44

1. BROADBAND NETWORKS AND INTERNET ARCHITECTURE

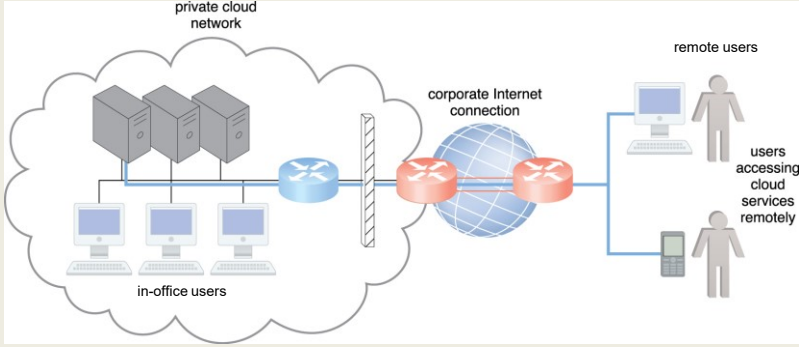

- Clouds must be connected to a network
- Inter-networking: Users' network must connect to cloud's network
- Public cloud computing relies heavily on the **internet**

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.45
------------------	---	--------

45

PRIVATE CLOUD NETWORKING

- For institutions with in-house private clouds

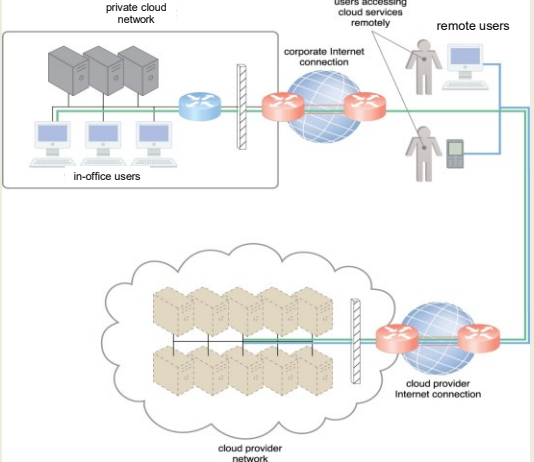

The diagram illustrates a private cloud network. On the left, a cloud contains three server racks and three desktop computers labeled 'in-office users'. A blue router connects these to a vertical firewall. To the right of the firewall is a 'corporate Internet connection' represented by a globe and two red routers. Further right, another red router connects to 'remote users', which includes a person at a computer and a person with a smartphone. Text next to the remote users says 'users accessing cloud services remotely'.

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.46
------------------	---	--------

46

PUBLIC CLOUD NETWORKING

- Resources can be extended by adding public cloud
- Places further dependency on the internet to provide connectivity

The diagram shows two network components. The top component is identical to the private cloud network diagram. The bottom component, labeled 'cloud provider network', shows a cloud containing two rows of server racks. A blue router connects this network to a 'cloud provider Internet connection' represented by a globe and two red routers. This cloud provider network is connected to the corporate Internet connection of the private cloud network.

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.47
------------------	---	--------

47

INTERNETWORKING KEY POINTS

- Cloud consumers and providers typically communicate via the internet
- Decentralized provisioning and management model is not controlled by the cloud consumers or providers
- Inter-networking (internet) relies on connectionless packet switching and route-based interconnectivity
- Routers and switches support communication
- Network bandwidth and latency influence QoS, which is heavily impacted by network congestion

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.48
------------------	---	--------

48

CLOUD ENABLING TECHNOLOGY

- *Adapted from Ch. 5 from Cloud Computing Concepts, Technology & Architecture*
- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.49
------------------	---	--------

49

2. DATA CENTER TECHNOLOGY

- Grouping servers together (clusters):
- Enables power sharing
- Higher efficiency in shared IT resource usage (less duplication of effort)
- Improved accessibility and organization

- Key components:
 - Virtualized and physical server resources
 - Standardized, modular hardware
 - Automation support: enable server provisioning, configuration, patching, monitoring without supervision... **tool/API support is desirable**

School of Engineering and Technology, University of Washington - Tacoma

L13.51

51

**Example:
Hyak Cluster
UW-Seattle**

DATA CENTER TECHNOLOGY – KEY COMPONENTS

- Remote operation / management
- **High availability support:** **redundant everything**
Includes: power supplies, cabling, environmental control systems, communication links, duplicate warm replica HW
- **Secure design:** physical and logical access control
- **Servers:** rackmount, etc.
- **Storage:** hard disk arrays (RAID)
- storage area network (SAN): disk array w/ multiple servers (individual nodes w/ disks) and a dedicated network
- network attached storage (NAS): inexpensive single node with collection of disks, provides shared filesystems, for NFS, etc.
- **Network hardware:** backbone routers (WAN to LAN connectivity), firewalls, VPN gateways, managed switches/routers

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.52
------------------	---	--------

52

CLOUD ENABLING TECHNOLOGY

53

CLOUD ENABLING TECHNOLOGY

- Broadband networks and internet architecture
- Data center technology
- **Virtualization technology**
- Multitenant technology
- Web/web services technology

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.54
------------------	---	--------

54

VIRTUALIZATION MANAGEMENT

- Virtual infrastructure management (VIM) tools
- Tools that manage pools of virtual machines, resources, etc.
- Private cloud software systems can be considered as a VIM

- Considerations:
- Performance overhead
 - Paravirtualization: custom OS kernels, I/O passed directly to HW w/ special drivers
- Hardware compatibility for virtualization
- Portability: virtual resources tend to be difficult to migrate cross-clouds

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.55
------------------	---	--------

55

VIRTUAL INFRASTRUCTURE MANAGEMENT (VIM)

- Middleware to manage virtual machines and infrastructure of IaaS “clouds”

- Examples
 - OpenNebula
 - Nimbus
 - Eucalyptus
 - OpenStack

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.56
------------------	---	--------

56

VIM FEATURES

- Create/destroy VM Instances
- Image repository
 - Create/Destroy/Update images
 - Image persistence

- Contextualization of VMs
 - Networking address assignment
 - DHCP / Static IPs
 - Manage SSH keys

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.57
------------------	---	--------

57

VIM FEATURES - 2

- Virtual network configuration/management
 - Public/Private IP address assignment
 - Virtual firewall management
 - Configure/support isolated VLANs (private clusters)

- Support common virtual machine managers (VMMs)
 - XEN, KVM, VMware
 - Support via libvirt library

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.58

58

VIM FEATURES - 3

- Shared “Elastic” block storage
 - Facility to create/update/delete VM disk volumes
 - Amazon EBS
 - Eucalyptus SC
 - OpenStack Volume Controller

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.59

59

CONTAINER ORCHESTRATION FRAMEWORKS

- Middleware to manage Docker application container deployments across virtual clusters of Docker hosts (VMs)
- Considered Infrastructure-as-a-Service

- **Opensource**
 - Kubernetes framework
 - Docker swarm
 - Apache Mesos/Marathon

- **Proprietary**
 - Amazon Elastic Container Service

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.60
------------------	---	--------

60

CONTAINER SERVICES

- **Public cloud container cluster services**
 - Azure Kubernetes Service (AKS)
 - Amazon Elastic Container Service for Kubernetes (EKS)
 - Amazon Elastic Container Service (ECS)
 - Google Kubernetes Engine (GKE)

- **Container-as-a-Service**
 - Azure Container Instances (ACI - April 2018)
 - AWS Fargate (November 2017)
 - Google Kubernetes Engine Serverless Add-on (alpha-July 2018)
 - Google Cloud Run (November 2019)
 - Now provides access to NVIDIA GPUs

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.61
------------------	---	--------

61

CLOUD ENABLING TECHNOLOGY

- *Adapted from Ch. 5 from Cloud Computing Concepts, Technology & Architecture*
- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- **Multitenant technology**
- Web/web services technology

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.62
------------------	---	--------

62

4. MULTITENANT APPLICATIONS

- Each tenant (like in an apartment) has their own view of the application
- Tenants are unaware of their neighbors
- Tenants can only access their data, no access to data and configuration that is not their own
- Customizable features
 - UI, business process, data model, access control
- Application architecture
 - User isolation, data security, recovery/backup by tenant, scalability for a tenant, for tenants, metered usage, data tier isolation

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.63
------------------	---	--------

63

MULTITENANT APPS - 2

- Forms the basis for SaaS (applications)

The diagram illustrates a multi-tenant architecture. At the top, two separate boxes represent 'Organization A' and 'Organization B'. Each organization contains a 'cloud service consumer'. Arrows from these consumers point down to a central cloud icon. Inside the cloud, there is a 'multitenant application' (represented by a grid of squares) and a 'hosting virtual server' (represented by a stack of cubes). A dashed line connects the multitenant application and the hosting virtual server, indicating their interaction.

November 7, 2024	TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024] School of Engineering and Technology, University of Washington - Tacoma	L13.64

------------------	---	--------

65

5. WEB SERVICES/WEB

- Web services technology is a key foundation of cloud computing's "**as-a-service**" cloud delivery model
- SOAP - "Simple" object access protocol
 - First generation web services
 - WSDL - web services description language
 - UDDI - universal description discovery and integration
 - SOAP services have their own unique interfaces
- REST - instead of defining a custom technical interface REST services are built on the use of HTTP protocol
- HTTP GET, PUT, POST, DELETE

November 7, 2024

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2024]
School of Engineering and Technology, University of Washington - Tacoma

L13.66

66

HYPertext TRANSPORT PROTOCOL (HTTP)

- An ASCII-based request/reply protocol for transferring information on the web
- HTTP request includes:
 - request method (GET, POST, etc.)
 - Uniform Resource Identifier (URI)
 - HTTP protocol version understood by the client
 - headers—extra info regarding transfer request
- HTTP response from server
 - Protocol version & status code →
 - Response headers
 - Response body

HTTP status codes:

2xx — *all is well*
3xx — *resource moved*
4xx — *access problem*
5xx — *server error*

School of Engineering and Technology, University of Washington - Tacoma

L13.67

67

REST: REPRESENTATIONAL STATE TRANSFER

- Web services protocol
- *Supersedes SOAP* – Simple Object Access Protocol
- Access and manipulate web resources with a predefined set of stateless operations (known as web services)
- Requests are made to a URI
- Responses are most often in JSON, but can also be HTML, ASCII text, XML, no real limits as long as text-based
- HTTP verbs: GET, POST, PUT, DELETE, ...

72

REST - 2

- App manipulates one or more types of resources.
- Everything the app does can be characterized as some kind of operation on one or more resources.
- Frequently services are CRUD operations (create/read/update/delete)
 - Create a new resource
 - Read resource(s) matching criterion
 - Update data associated with some resource
 - Destroy a particular a resource
- Resources are often implemented as objects in OO languages

73

REST ARCHITECTURAL ADVANTAGES

- **Performance:** component interactions can be the dominant factor in user-perceived performance and network efficiency
- **Scalability:** to support large numbers of services and interactions among them
- **Simplicity:** of the Uniform Interface
- **Modifiability:** of services to meet changing needs (even while the application is running)
- **Visibility:** of communication between services
- **Portability:** of services by redeployment
- **Reliability:** resists failure at the system level as redundancy of infrastructure is easy to ensure
