

TCSS 562: SOFTWARE ENGINEERING FOR CLOUD COMPUTING

Cloud Computing:
*AWS Demo,
Fundamental Cloud Architectures*

Wes J. Lloyd
School of Engineering and Technology
University of Washington - Tacoma

FEEDBACK FROM 10/29

- If storing files on S3 using a Lambda service, what charges result?
 - Example: 1 GB file (S3 Standard Storage)
 - US-EAST-1 (Virginia) Region
- S3 Storage costs:
FREE TIER: 5GB/month/free for first 12-months
then: 2.3¢/GB/month afterwards
- Lambda ↔ S3 transfer cost:
 - Transfers between S3 and any service(s) (e.g. Lambda) within the same region are **FREE**.

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.2

FEEDBACK - 2

- Transaction costs
 - PUT,COPY,POST,LIST requests 2,000 for 1¢
 - GET, SELECT requests 25,000 for 1¢
- Can files on S3 persist throughout TCSS 562?
 - In this case, what charges can be expected?
 - First year (<5GB) - no charges
 - After Firs Year – standard billing charges
- For storage on Lambda, do we need to clear the Lambda service and redeploy to get new charge?

October 31, 2018	TCSS562: Software Engineering for Cloud Computing [Fall 2018] School of Engineering and Technology, University of Washington - Tacoma	L11.3
------------------	--	-------

OTHER S3 COSTS

- Data Download from S3:
 - 1st GB in month = FREE
 - Next 9.999 TB/Month = 9¢/GB/month
- Data Upload to S3: FREE
- Transfer between regions: varies from 1-2¢/GB/month

October 31, 2018	TCSS562: Software Engineering for Cloud Computing [Fall 2018] School of Engineering and Technology, University of Washington - Tacoma	L11.4
------------------	--	-------

OBJECTIVES

- Tutorial 4
- Tutorial 5
- Midterm 11/7
- Term Project Check-in

- AWS Demo cont'd
- Cloud Computing: Concepts, Technology & Architecture Book:
 - Ch. 5 Cloud Enabling Technologies / Virtualization

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.5

AWS DEMO

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.6

CLOUDWATCH

- Integration with many AWS services
- CloudTrail – enable detailed persisted logging to S3 for Lambda, other services
- Configure a Billing Alarm
- CloudWatch Events
 - Can be used to configure Lambda warming triggers
 - CloudWatch has rules and targets
- CloudWatch Metrics

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.7

AWS EC2

- Elastic Compute Cloud
- Instance types: <https://ec2instances.info>
 - On demand instance – full price
 - Reserved instance – contract based
 - Spot instance – auction based, terminates with 2 minute warning
 - Dedicated/reserved host – reserved HW
 - Reserved host
 - Instance families:
General, compute-optimized, memory-optimized, GPU, etc.

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.8

AWS EC2 - 2

- Internet connectivity
- Security Groups (firewall)
- Storage types
 - Instance storage - ephemeral storage
 - 1st, 2nd, and 3rd generation (e.g. c3/m3), and now c5d/m5d
 - EBS - Elastic block store
 - EFS - Elastic file system

October 31, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.9

INSTANCE STORAGE

- Also called ephemeral storage
- Persisted using images saved to S3 (simple storage service)
 - ~2.3¢ per GB/month on S3
 - 5GB of free tier storage space on S3
- Requires “burning” an image
- Mutli-step process:
 - Create image files
 - Upload chunks to S3
 - Register image
- Launching a VM
 - Requires downloading image components from S3, reassembling them... is potentially slow
- VMs with instance store backed root volumes not pause-able
- Historically root volume limited to 10-GB max- **faster Imaging...**

October 31, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.10

ELASTIC BLOCK STORE

- EBS cost model is different than instance storage (uses S3)
 - ~10¢ per GB/month
 - 30GB of free tier storage space
- EBS provides “live” mountable volumes
 - Listed under volumes
 - **Data volumes**: can be mounted/unmounted to any VM, dynamically at any time
 - **Root volumes**: hosts OS files and acts as a boot device for VM
 - In Linux drives are linked to a mount point “directory”
- Snapshots back up EBS volume data to S3
 - Enables replication (required for horizontal scaling)
 - EBS volumes not actively used should be snapshotted, and deleted to save EBS costs...

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.11

EBS VOLUME TYPES - 2

- Metric: I/O Operations per Second (IOPS)
- General Purpose 2 (GP2)
 - 3 IOPS per GB, Max 10,000 IOPS, 160MB/sec per volume
- Provisioned IOPS (IO1)
 - 32,000 IOPS, and 500 MB/sec throughput per volume
- Throughput Optimized HDD (ST1)
 - Up to 500 MB/sec throughput
 - 4.5 ¢ per GB/month
- Cold HDD (SC1)
 - Up to 250 MB/sec throughput
 - 2.5 ¢ per GB/month
- Magnetic
 - Up to 800 MB/sec throughput
 - 5 ¢ per GB/month

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.12

ELASTIC FILE SYSTEM (EFS)

- Network file system (based on NFSv4 protocol)
- Shared file system for EC2 instances
- Enables mounting (sharing) the same disk “volume” for R/W access across multiple instances at the same time
- Different performance and limitations vs. EBS/Instance store
- Implementation uses abstracted EC2 instances
- ~ 30 ¢ per GB/month storage – **default burstable throughput**
- **Throughput modes:**
- Can modify modes only once every 24 hours
- **Burstable Throughput Model:**
 - Baseline – 50kb/sec per GB
 - Burst – 100MB/sec per GB (for volumes sized 10GB to 1024 GB)
 - Credits – .72 minutes/day per GB

October 31, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.13

ELASTIC FILE SYSTEM (EFS) - 2

- **Burstable Throughput Rates**
 - Throughput rates: baseline vs burst
 - Credit model for bursting: maximum burst per day

File System Size (GiB)	Baseline Aggregate Throughput (MiB/s)	Burst Aggregate Throughput (MiB/s)	Maximum Burst Duration (Min/Day)	% of Time File System Can Burst (Per Day)
10	0.5	100	7.2	0.5%
256	12.5	100	180	12.5%
512	25.0	100	360	25.0%
1024	50.0	100	720	50.0%
1536	75.0	150	720	50.0%
2048	100.0	200	720	50.0%
3072	150.0	300	720	50.0%
4096	200.0	400	720	50.0%

October 31, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.14

ELASTIC FILE SYSTEM (EFS) - 3

- **Throughput Models**
- **Provisioned Throughput Model**
- **For applications with:**
 - high performance requirements, but low storage requirements
- **Get high levels of performance w/o overprovisioning capacity**
- **\$6 MB/s-Month (Virginia Region)**
 - Default is 50kb/sec for 1 GB, .05 MB/s = 30 ¢ per GB/month
- **If file system metered size has higher baseline rate based on size, file system follows default Amazon EFS Bursting Throughput model**
 - No charges for Provisioned Throughput below file system's entitlement in Bursting Throughput mode
 - Throughput entitlement = 50kb/sec per GB

October 31, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.15

ELASTIC FILE SYSTEM (EFS) - 4

Performance Comparison, Amazon EFS and Amazon EBS

	Amazon EFS	Amazon EBS Provisioned IOPS
Per-operation latency	Low, consistent latency.	Lowest, consistent latency.
Throughput scale	10+ GB per second.	Up to 2 GB per second.

Storage Characteristics Comparison, Amazon EFS and Amazon EBS

	Amazon EFS	Amazon EBS Provisioned IOPS
Availability and durability	Data is stored redundantly across multiple AZs.	Data is stored redundantly in a single AZ.
Access	Up to thousands of Amazon EC2 instances, from multiple AZs, can connect concurrently to a file system.	A single Amazon EC2 instance in a single AZ can connect to a file system.
Use cases	Big data and analytics, media processing workflows, content management, web serving, and home directories.	Boot volumes, transactional and NoSQL databases, data warehousing, and ETL.

October 31, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.16

AMAZON MACHINE IMAGES

- AMIs
- Unique for the operating system (root device image)
- Two types
 - Instance store
 - Elastic block store (EBS)
- Deleting requires multiple steps
 - Deregister AMI
 - Delete associated data - (*files in S3*)
- Forgetting both steps leads to costly “orphaned” data
 - No way to instantiate a VM from deregistered AMIs
 - Data still in S3 resulting in charges

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.17

EC2 VIRTUALIZATION - PARAVIRTUAL

- 1st, 2nd, 3rd, 4th generation → XEN-based
- 5th generation instances → AWS Nitro virtualization
- XEN - two virtualization modes
- XEN Paravirtualization “paravirtual”
 - 10GB Amazon Machine Image – base image size limit
 - Addressed poor performance of old XEN HVM mode
 - I/O performed using special XEN kernel with XEN paravirtual mode optimizations for better performance
 - Requires OS to have an available paravirtual kernel
 - PV VMs: will use common AKI files on AWS – *Amazon kernel Image(s)*
 - Look for common identifiers

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.18

EC2 VIRTUALIZATION - HVM

- **XEN HVM mode**
 - Full virtualization – no special OS kernel required
 - Computer entirely simulated
 - MS Windows runs in “hvm” mode
 - Allows work around: 10GB instance store root volume limit
 - Kernel is on the root volume (under /boot)
 - No AKIs (kernel images)
 - Commonly used today (*EBS-backed instances*)

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.19

EC2 VIRTUALIZATION - NITRO

- **Nitro based on Kernel-based-virtual-machines**
 - Stripped down version of Linux KVM hypervisor
 - Uses KVM core kernel module
 - I/O access has a direct path to the device
- Goal: provide indistinguishable performance from bare metal

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.20

EVOLUTION OF AWS VIRTUALIZATION

From: <http://www.brendangregg.com/blog/2017-11-29/aws-ec2-virtualization-2017.html>

AWS EC2 Virtualization Types

Bare-metal performance

Near-metal performance

Optimized performance

Poor performance

Most

Importance

Least

CPU, Memory

Network I/O

Local Storage I/O

Remote Storage I/O

Interrupts, Timers

Motherboard, Boot

#	Tech	Type	With							
1	VM	Fully Emulated		VS	VS	VS	VS	VS	VS	VS
2	VM	Xen PV 3.0	PV drivers	P	P	P	P	P	VS	VS
3	VM	Xen HVM 3.0	PV drivers	VH	P	P	P	P	VS	VS
4	VM	Xen HVM 4.0.1	PVHVM drivers	VH	P	P	P	P	P	VS
5	VM	Xen AWS 2013	PVHVM + SR-IOV(net)	VH	VH	P	P	P	P	VS
6	VM	Xen AWS 2017	PVHVM + SR-IOV(net, stor.)	VH	VH	VH	P	P	P	VS
7	VM	AWS Nitro 2017		VH	VH	VH	VH	VH	VH	VS
8	HW	AWS Bare Metal 2017		H	H	H	H	H	H	H
		Bare Metal		H	H	H	H	H	H	H

VM: Virtual Machine. HW: Hardware.

VS: Virt. in software. VH: Virt. in hardware. P: Paravirt. Not all combinations shown.

SR-IOV(net): ixgbe/ena driver. SR-IOV(storage): nvme driver.

School of Engineering and Technology, University of Washington - Tacoma

L11.21

INSTANCE ACTIONS

Stop

- Costs of “pausing” an instance

Terminate

Reboot

Image management

Creating an image

- EBS (snapshot)

Bundle image

- Instance-store

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.22

EC2 INSTANCE: NETWORK ACCESS

- Public IP address
- Elastic IPs
 - Costs: in-use FREE, not in-use ~12 \$/day
 - Not in-use (e.g. “paused” EBS-backed instances)
- Security groups
 - E.g. firewall
- Identity access management (IAM)
 - AWS accounts, groups
- VPC / Subnet / Internet Gateway / Router
- NAT-Gateway

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.23

SIMPLE VPC

- Recommended when using Amazon EC2

The diagram illustrates a Simple VPC setup. It shows a VPC (Virtual Private Cloud) with a Subnet (Subnet 1) containing an EC2 Instance. The VPC is connected to the Internet via a Router and an Internet Gateway. A Custom Route Table is shown with the following routes:

Destination	Target
10.0.0.0/16	local
0.0.0.0/0	igw-id

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.24

VIRTUAL PRIVATE CLOUD (VPC)

- Core components
 - VPCs
 - Subnets
 - Route Tables
 - Internet Gateways
 - DHCP Option Sets
 - Elastic IPs
 - NAT Gateways

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.26

SIMPLE STORAGE SERVICE (S3)

- Key-value blob storage
- What is the difference vs. key-value stores (NoSQL DB)?
- Can mount an S3 bucket as a volume in Linux
 - Supports common file-system operations
- Provides eventual consistency
- Can store Lambda function state for life of container.

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.27

AWS CLI

- Launch Ubuntu 16.04 VM
 - Instances | Launch Instance
- Install the general AWS CLI
 - `sudo apt install awscli`
- Create config file
[default]
`aws_access_key_id = <access key id>`
`aws_secret_access_key = <secret access key>`
`region = us-east-1`

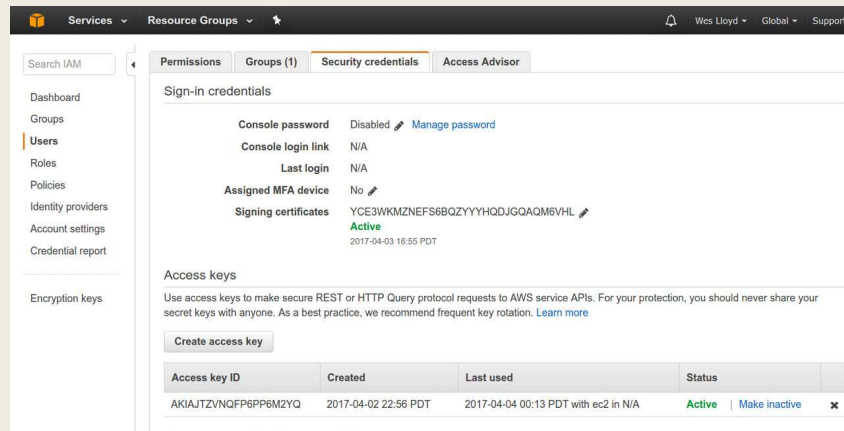

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.28

AWS CLI - 2

- **Creating access keys:** IAM | Users | Security Credentials | Access Keys | Create Access Keys

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.29

AWS CLI - 3

- **Export the config file**
 - Add to `/home/ubuntu/.bashrc`

```
export AWS_CONFIG_FILE=$HOME/.aws/config
```

- **Try some commands:**
 - `aws help`
 - `aws command help`
 - `aws ec2 help`
 - `aws ec2 describes-instances --output text`
 - `aws ec2 describe-instances --output json`
 - `aws s3 ls`
 - `aws s3 ls vmscaleruw`

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.30

ALTERNATIVE CLI

- `sudo apt install ec2-api-tools`
- Provides more concise output
- Additional functionality
- Define variables in `.bashrc` or another sourced script:
 - `export AWS_ACCESS_KEY={your access key}`
 - `export AWS_SECRET_KEY={your secret key}`
- `ec2-describe-instances`
- `ec2-run-instances`
- `ec2-request-spot-instances`
- EC2 management from Java:
 - <http://docs.aws.amazon.com/AWSJavaSDK/latest/javadoc/index.html>

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.31

INSPECTING INSTANCE INFORMATION

- Find your instance ID:

```
curl http://169.254.169.254/  
curl http://169.254.169.254/latest/  
curl http://169.254.169.254/latest/meta-data/  
curl http://169.254.169.254/latest/meta-data/instance-id  
; echo
```
- `ec2-get-info` command (??)

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.32

PRIVATE KEY AND CERTIFICATE FILE

- Install openssl package on VM

```
# generate private key file
```

```
$openssl genrsa 2048 > mykey.pk
```

```
# generate signing certificate file
```

```
$openssl req -new -x509 -nodes -sha256 -days 36500 -key  
mykey.pk -outform PEM -out signing.cert
```

- Add signing.cert to IAM | Users | Security Credentials |
- - *new signing certificate* - -

- From: http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/setup-ami-tools.html?icmpid=docs_iam_console#ami-tools-create-certificate

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.33

PRIVATE KEY, CERTIFICATE FILE

- These files, combined with your `AWS_ACCESS_KEY` and `AWS_SECRET_KEY` and `AWS_ACCOUNT_ID` enable you to publish new images from the CLI

- Objective:

1. Configure VM with software stack
2. Burn new image for VM replication (**horizontal scaling**)

- Some folks may just install Docker. . .

- Create image script . . .

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.34

CREATE A NEW INSTANCE STORE
IMAGE SCRIPT

```
image=$1
echo "Burn image $image"
echo "$image" > image.id
mkdir /mnt/tmp
AWS_KEY_DIR=/home/ubuntu/.aws
export EC2_URL=http://ec2.amazonaws.com
export S3_URL=https://s3.amazonaws.com
export EC2_PRIVATE_KEY=${AWS_KEY_DIR}/mykey.pk
export EC2_CERT=${AWS_KEY_DIR}/signing.cert
export AWS_USER_ID={your account id}
export AWS_ACCESS_KEY={your aws access key}
export AWS_SECRET_KEY={your aws secret key}
ec2-bundle-vol -s 5000 -u ${AWS_USER_ID} -c ${EC2_CERT} -k ${EC2_PRIVATE_KEY}
--ec2cert /etc/ec2/amitools/cert-ec2.pem --no-inherit -r x86_64 -p $image -i
/etc/ec2/amitools/cert-ec2.pem
cd /tmp
ec2-upload-bundle -b tcss562 -m $image.manifest.xml -a ${AWS_ACCESS_KEY} -s
${AWS_SECRET_KEY} --url http://s3.amazonaws.com --location US
ec2-register tcss562/$image.manifest.xml --region us-east-1 --kernel aki-
88aa75e1
```

L11.35

OBJECTIVES

- Cloud Enabling Technology (Ch. 5 Erl book)

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.36

CLOUD ENABLING TECHNOLOGY

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.37

CLOUD ENABLING TECHNOLOGY

- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.38

1. BROADBAND NETWORKS AND INTERNET ARCHITECTURE

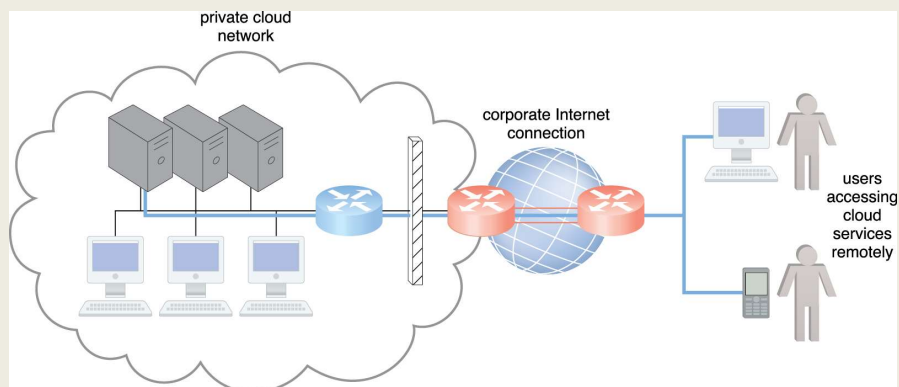

- Clouds must be connected to a network
- Inter-networking: Users' network must connect to cloud's network
- Public cloud computing relies heavily on the internet

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.39

PRIVATE CLOUD NETWORKING

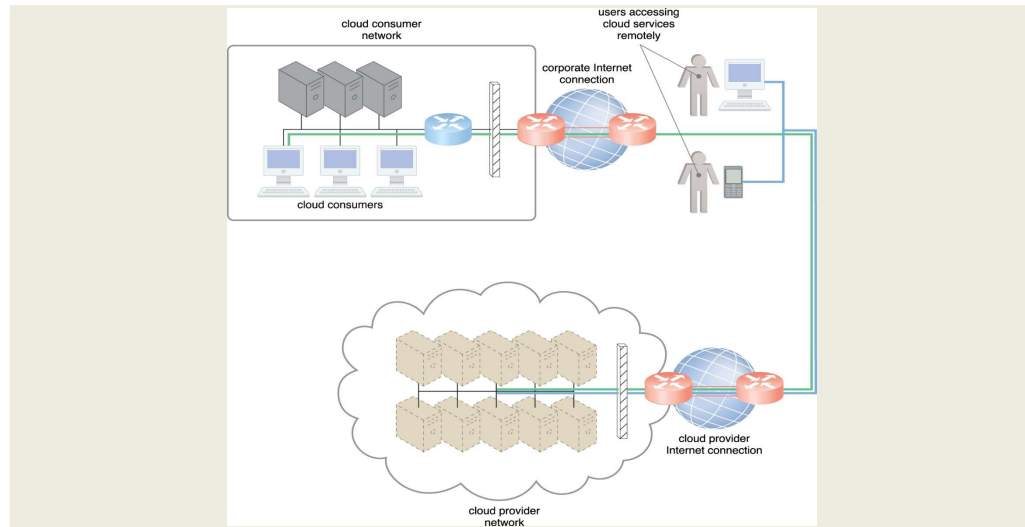

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.40

PUBLIC CLOUD NETWORKING

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.41

INTERNETWORKING KEY POINTS

- Cloud consumers and providers typically communicate via the internet
- Decentralized provisioning and management model is not controlled by the cloud consumers or providers
- Inter-networking (internet) relies on connectionless packet switching and route-based interconnectivity
- Routers and switches support communication
- Network bandwidth and latency influence QoS, which is heavily impacted by network congestion

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.42

2. DATA CENTER TECHNOLOGY

- Grouping servers together:
- Enables power sharing
- Higher efficiency in shared IT resource usage (less duplication of effort)
- Improved accessibility and organization
- Key components:
 - Virtualized and physical server resources
 - Standardized, modular hardware
 - Automation support: ease server provisioning, configuration, patching, monitoring without supervision... *tools are desirable*

CLUSTER MANAGEMENT TOOLS

DATA CENTER TECHNOLOGY – KEY COMPONENTS

- Remote operation / management
- **High availability support:** **redundant everything**
Includes: power supplies, cabling, environmental control systems, communication links, duplicate warm replica hardware
- **Secure design:** physical and logical access control
- **Servers:** rackmount, etc.
- **Storage:** hard disk arrays (RAID), storage area network (SAN): disk array with dedicated network, network attached storage (NAS): disk array on network for NFS, etc.
- **Network hardware:** backbone routers (WAN to LAN connectivity), firewalls, VPN gateways, managed switches/routers

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.45

3. VIRTUALIZATION TECHNOLOGY

- Convert a physical IT resource into a virtual IT resource
- Servers, storage, network, power (virtual UPSs)
- Virtualization supports:
 - Hardware independence
 - Server consolidation
 - Resource replication
 - Resource pooling
 - Elastic scalability
- Virtual servers
 - Operating-system based virtualization
 - Hardware-based virtualization

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.46

VIRTUAL MACHINES

- Emulation/simulation of a computer in software
- Provides a substitute for a real computer or server
- Virtualization platforms provide functionality to run an entire operating system
- Allows running multiple different operating systems, or operating systems with different versions simultaneously on the same computer

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.47

KEY VIRTUALIZATION TRADEOFF

- Tradeoff space:

**Degree of
Hardware
Abstraction**

**Concerns:
Overhead
Performance
Isolation
Security**

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.48

TYPE 1 HYPERVISOR

- Host OS and VMs run atop the hypervisor
- The boot OS is the hypervisor kernel
- Xen dom0

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.49

TYPE 1 HYPERVISOR

- Acts as a control program
- Miniature OS kernel that manages VMs
- Boots and runs on bare metal
- Also known as Virtual Machine Monitor (VMM)
- Paravirtualization: Kernel includes I/O drivers
- VM guest OSes must use special kernel to interoperate
- Paravirtualization provides hooks to the guest VMs
- Kernel traps instructions (i.e. device I/O) to implement sharing & multiplexing
- User mode instructions run directly on the CPU
- Objective: minimize virtualization overhead
- Classic example is XEN (dom0 kernel)

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.50

COMMON VMMS: PARAVIRTUALIZATION

- TYPE 1
- XEN
 - Citrix Xen-server (a commercial version of XEN)
- VMWare ESXi
- KVM (virtualization support in kernel)
- Paravirtual I/O drivers introduced
 - XEN
 - KVM
 - Virtualbox

October 31, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.51

XEN - 2

- VMs managed as “domains”
- Domain 0 is the hypervisor domain
 - Host OS is installed to run on bare-metal, but doesn’t directly facilitate virtualization (*unlike KVM*)
- Domains 1..n are guests (VMs) – not bare-metal

```

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.53

XEN - 3

- Physical machine boots special XEN kernel
- Kernel provides paravirtual API to manage CPU & device multiplexing
- Guests require modified XEN-aware kernels
- Xen supports full-virtualization for unmodified OS guests in hvm mode
- Amazon EC2 largely based on modified version of XEN hypervisor (EC2 gens 1-4)
- XEN provides its own CPU schedulers, I/O scheduling

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.54

TYPE 2 HYPERVISOR

■ Adds additional layer

VM
(guest operating system and application software)

VM
(guest operating system and application software)

VM
(guest operating system and application software)

Virtual Machine Management

Operating System
(host OS)

Hardware
(virtualization host)

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.55

TYPE 2 HYPERVISOR

■ Problem: Original x86 CPUs could not trap special instructions

■ Instructions not specially marked

■ Solution: Use Full Virtualization

■ Trap ALL instructions

■ “Fully” simulate entire computer

■ Tradeoff: Higher Overhead

■ Benefit: Can virtualize any operating system without modification

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.56

KERNEL BASED VIRTUAL MACHINES (KVM)

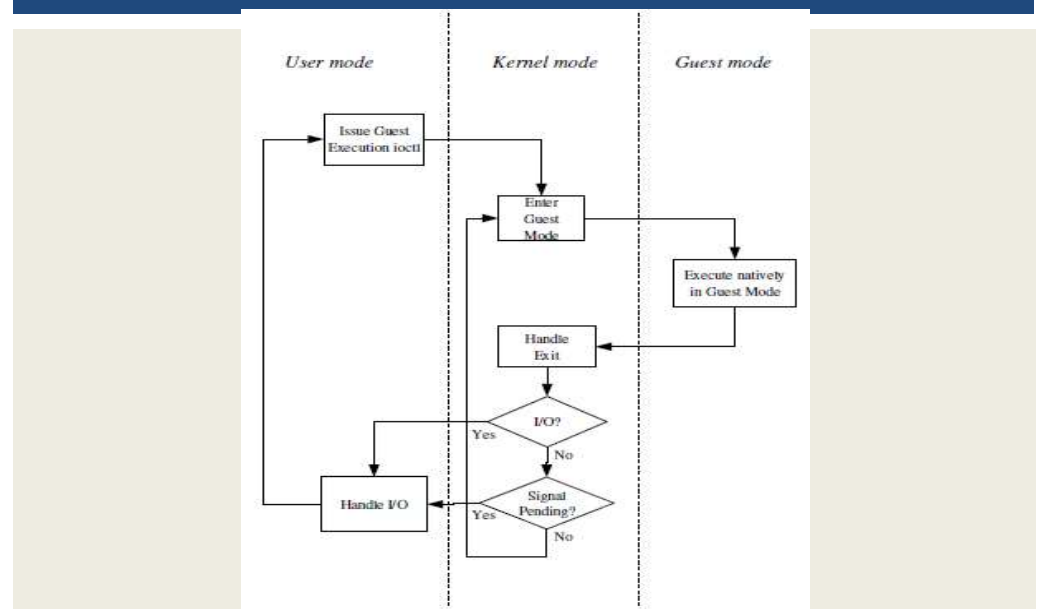

- x86 HW notoriously difficult to virtualize
- Extensions added to 64-bit Intel/AMD CPUs
 - Provides hardware assisted virtualization
 - New “guest” operating mode
 - Hardware state switch
 - Exit reason reporting
 - Intel/AMD implementations different
 - Linux uses vendor specific kernel modules

October 31, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.57

KVM - 2

KVM – 3

- KVM has /dev/kvm device file node
 - Linux character device, with operations:
 - Create new VM
 - Allocate memory to VM
 - Read/write virtual CPU registers
 - Inject interrupts into vCPUs
 - Running vCPUs
- VMs run as Linux processes
 - Scheduled by host Linux OS
 - Can be pinned to specific cores with “taskset”

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.59

KVM PARAVIRTUALIZED I/O

- KVM – Virtio
 - Custom Linux based paravirtual device drivers
 - Supersedes QEMU hardware emulation (full virt.)
 - Based on XEN paravirtualized I/O
 - Custom block device driver provides paravirtual device emulation
 - Virtual bus (memory ring buffer)
 - Requires hypercall facility
 - Direct access to memory

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.60

KVM DIFFERENCES FROM XEN

- KVM requires CPU VMX support
 - Virtualization management extensions
- KVM can virtualize any OS without special kernels
 - Less invasive
- KVM was originally separate from the Linux kernel, but then integrated
- KVM is type 1 hypervisor because the machine boots Linux which has integrated support for virtualization
- Different than XEN because XEN kernel alone is not a full-fledged OS

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.61

KVM ENHANCEMENTS

- Paravirtualized device drivers
 - Virtio
- Guest Symmetric Multiprocessor (SMP) support
 - Leverages multiple on-board CPUs
 - Supported as of Linux 2.6.23
- VM Live Migration
- Linux scheduler integration
 - Optimize scheduler with knowledge that KVM processes are virtual machines

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.62

VIRTUALIZATION MANAGEMENT

- Virtual infrastructure management (VIM) tools
- Tools that manage pools of virtual machines, resources, etc.
- Private cloud software systems can be considered as a VIM
- Considerations:
- Performance overhead
 - Paravirtualization: custom OS kernels, I/O passed directly to HW w/ special drivers
- Hardware compatibility for virtualization
- Portability: virtual resources tend to be difficult to migrate cross-clouds

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.63

VIRTUAL INFRASTRUCTURE MANAGEMENT (VIM)

- Middleware to manage virtual machines and infrastructure of IaaS “clouds”
- Examples
 - OpenNebula
 - Nimbus
 - Eucalyptus
 - OpenStack

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.64

VIM FEATURES

- Create/destroy VM Instances
- Image repository
 - Create/Destroy/Update images
 - Image persistence
- Contextualization of VMs
 - Networking address assignment
 - DHCP / Static IPs
 - Manage SSH keys

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.65

VIM FEATURES - 2

- Virtual network configuration/management
 - Public/Private IP address assignment
 - Virtual firewall management
 - Configure/support isolated VLANs (private clusters)
- Support common virtual machine managers (VMMs)
 - XEN, KVM, VMware
 - Support via libvirt library

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.66

VIM FEATURES - 3

- Shared “Elastic” block storage
 - Facility to create/update/delete VM disk volumes
 - Amazon EBS
 - Eucalyptus SC
 - OpenStack Volume Controller

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.67

4. MULTITENANT APPLICATIONS

- Each tenant (like in an apartment) has their own view of the application
- Tenants are unaware of their neighbors
- Tenants can only access their data, no access to data and configuration that is not their own
- Customizable features
 - UI, business process, data model, access control
- Application architecture
 - User isolation, data security, recovery/backup by tenant, scalability for a tenant, for tenants, metered usage, data tier isolation

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.68

MULTITENANT APPS - 2

- Forms the basis for SaaS (applications)

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.69

WEB SERVICES/WEB

- Web services technology is a key foundation of cloud computing's "as-a-service" cloud delivery model
- SOAP – “Simple” object access protocol
 - First generation web services
 - WSDL – web services description language
 - UDDI – universal description discovery and integration
 - SOAP services have their own unique interfaces
- REST – instead of defining a custom technical interface REST services are built on the use of HTTP protocol
- HTTP GET, PUT, POST, DELETE

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.70

HYPERTEXT TRANSPORT PROTOCOL (HTTP)

- An ASCII-based request/reply protocol for transferring information on the web
- HTTP request includes:
 - request method (GET, POST, etc.)
 - Uniform Resource Identifier (URI)
 - HTTP protocol version understood by the client
 - headers—extra info regarding transfer request
- HTTP response from server
 - Protocol version & status code →
 - Response headers
 - Response body

HTTP status codes:

2xx — *all is well*
3xx — *resource moved*
4xx — *access problem*
5xx — *server error*

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.71

REST: REPRESENTATIONAL STATE TRANSFER

- Web services protocol
- *Supersedes SOAP* – Simple Object Access Protocol
- Access and manipulate web resources with a predefined set of stateless operations (known as web services)
- Requests are made to a URI
- Responses are most often in JSON, but can also be HTML, ASCII text, XML, no real limits as long as text-based
- HTTP verbs: GET, POST, PUT, DELETE, ...

REST CLIMATE SERVICES EXAMPLE

■ USDA
Lat/Long
Climate
Service
Demo

■ Just provide
a Lat/Long

```
// REST/JSON
// Request climate data for Washington

{
  "parameter": [
    {
      "name": "latitude",
      "value": 47.2529
    },
    {
      "name": "longitude",
      "value": -122.4443
    }
  ]
}
```

REST - 2

- App manipulates one or more types of resources.
- Everything the app does can be characterized as some kind of operation on one or more resources.
- Frequently services are CRUD operations (create/read/update/delete)
 - Create a new resource
 - Read resource(s) matching criterion
 - Update data associated with some resource
 - Destroy a particular a resource
- Resources are often implemented as objects in OO languages

October 31, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L11.77

REST ARCHITECTURAL ADVANTAGES

- **Performance:** component interactions can be the dominant factor in user-perceived performance and network efficiency
- **Scalability:** to support large numbers of services and interactions among them
- **Simplicity:** of the Uniform Interface
- **Modifiability:** of services to meet changing needs (even while the application is running)
- **Visibility:** of communication between services
- **Portability:** of services by redeployment
- **Reliability:** resists failure at the system level as redundancy of infrastructure is easy to ensure
