

TCSS 562: SOFTWARE ENGINEERING FOR CLOUD COMPUTING

Cloud Computing:
AWS Demo,
Fundamental Cloud Architectures

Wes J. Lloyd
School of Engineering and Technology
University of Washington - Tacoma

OBJECTIVES

- Term Project Checkin – Monday Nov 12
- Midterm Wednesday 11/7
- No Lab this week
- Tutorial 5 – Wednesday 11/14
- Tutorial 6 – Monday 11/19

- AWS Demo cont'd
- Cloud Computing: Concepts, Technology & Architecture Book:
 - Ch. 5 Cloud Enabling Technologies / Virtualization

November 5, 2018

L12.2

QUESTIONS

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.3

AWS DEMO

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.4

AMAZON MACHINE IMAGES

- AMIs
- Unique for the operating system (root device image)
- Two types
 - Instance store
 - Elastic block store (EBS)
- Deleting requires multiple steps
 - Deregister AMI
 - Delete associated data - (*files in S3*)
- Forgetting both steps leads to costly “orphaned” data
 - No way to instantiate a VM from deregistered AMIs
 - Data still in S3 resulting in charges

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.5

EC2 VIRTUALIZATION - PARAVIRTUAL

- 1st, 2nd, 3rd, 4th generation → XEN-based
- 5th generation instances → AWS Nitro virtualization
- XEN - two virtualization modes
- XEN Paravirtualization “paravirtual”
 - 10GB Amazon Machine Image – base image size limit
 - Addressed poor performance of old XEN HVM mode
 - I/O performed using special XEN kernel with XEN paravirtual mode optimizations for better performance
 - Requires OS to have an available paravirtual kernel
 - PV VMs: will use common AKI files on AWS – *Amazon kernel Image(s)*
 - Look for common identifiers

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.6

EC2 VIRTUALIZATION - HVM

- **XEN HVM mode**
 - Full virtualization – no special OS kernel required
 - Computer entirely simulated
 - MS Windows runs in “hvm” mode
 - Allows work around: 10GB instance store root volume limit
 - Kernel is on the root volume (under /boot)
 - No AKIs (kernel images)
 - Commonly used today (*EBS-backed instances*)

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.7

EC2 VIRTUALIZATION - NITRO

- **Nitro based on Kernel-based-virtual-machines**
 - Stripped down version of Linux KVM hypervisor
 - Uses KVM core kernel module
 - I/O access has a direct path to the device
- Goal: provide indistinguishable performance from bare metal

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.8

EVOLUTION OF AWS VIRTUALIZATION

From: <http://www.brendangregg.com/blog/2017-11-29/aws-ec2-virtualization-2017.html>

AWS EC2 Virtualization Types

Bare-metal performance

Near-metal performance

Optimized performance

Poor performance

Most

Importance

Least

CPU, Memory

Network I/O

Local Storage I/O

Remote Storage I/O

Interrupts, Timers

Motherboard, Boot

#	Tech	Type	With						
1	VM	Fully Emulated		VS	VS	VS	VS	VS	VS
2	VM	Xen PV 3.0	PV drivers	P	P	P	P	VS	VS
3	VM	Xen HVM 3.0	PV drivers	VH	P	P	P	VS	VS
4	VM	Xen HVM 4.0.1	PVHVM drivers	VH	P	P	P	P	VS
5	VM	Xen AWS 2013	PVHVM + SR-IOV(net)	VH	VH	P	P	P	VS
6	VM	Xen AWS 2017	PVHVM + SR-IOV(net, stor.)	VH	VH	VH	P	P	VS
7	VM	AWS Nitro 2017		VH	VH	VH	VH	VH	VS
8	HW	AWS Bare Metal 2017		H	H	H	H	H	H
		Bare Metal		H	H	H	H	H	H

VM: Virtual Machine. HW: Hardware.

VS: Virt. in software. VH: Virt. in hardware. P: Paravirt. Not all combinations shown.

SR-IOV(net): ixgbe/ena driver. SR-IOV(storage): nvme driver.

School of Engineering and Technology, University of Washington - Tacoma

L12.10

EC2 INSTANCE: NETWORK ACCESS

- Public IP address
- Elastic IPs
 - Costs: in-use FREE, not in-use ~12 \$/day
 - Not in-use (e.g. “paused” EBS-backed instances)
- Security groups
 - E.g. firewall
- Identity access management (IAM)
 - AWS accounts, groups
- VPC / Subnet / Internet Gateway / Router
- NAT-Gateway

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.11

SIMPLE VPC

- Recommended when using Amazon EC2

The diagram illustrates a Simple VPC setup. It shows a VPC (Virtual Private Cloud) with a CIDR block of 10.0.0.0/16, located in a specific Region. Inside the VPC, there is a Subnet (Subnet 1) with a CIDR block of 10.0.0.0/24. An EC2 Instance is deployed within this subnet, with a private IP address of 10.0.0.5. The VPC is connected to the Internet via a Router and an Internet Gateway. A Custom Route Table is shown, which defines the routing for traffic within the VPC and to the Internet. The route table has two entries: one for the destination 10.0.0.0/16 with a target of 'local', and another for the destination 0.0.0.0/0 with a target of 'igw-id' (the Internet Gateway ID). The VPC is also connected to the Internet via a Router and an Internet Gateway. The VPC is labeled 'VPC 1' and the Region is labeled 'Region'.

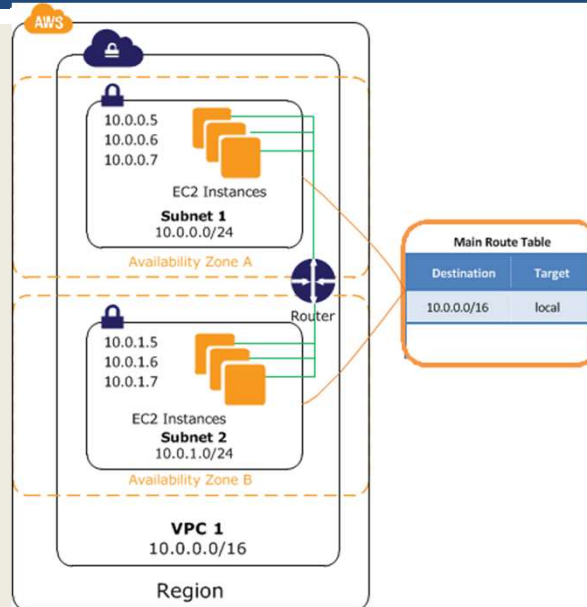

Destination	Target
10.0.0.0/16	local
0.0.0.0/0	igw-id

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.12

VPC SPANNING AVAILABILITY ZONES

VIRTUAL PRIVATE CLOUD (VPC)

■ Core components

- VPCs
- Subnets
- Route Tables
- Internet Gateways
- DHCP Option Sets
- Elastic IPs
- NAT Gateways

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.14

SIMPLE STORAGE SERVICE (S3)

- Key-value blob storage
- What is the difference vs. key-value stores (NoSQL DB)?
- Can mount an S3 bucket as a volume in Linux
 - Supports common file-system operations
- Provides eventual consistency
- Can store Lambda function state for life of container.

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.15

AWS CLI

- Launch Ubuntu 16.04 VM
 - Instances | Launch Instance
- Install the general AWS CLI
 - `sudo apt install awscli`
- Create config file
[default]
`aws_access_key_id = <access key id>`
`aws_secret_access_key = <secret access key>`
`region = us-east-1`

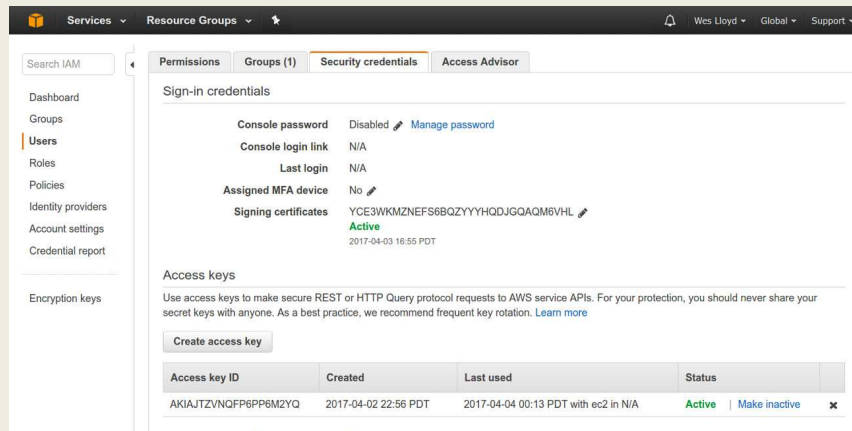

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.16

AWS CLI - 2

- **Creating access keys:** IAM | Users | Security Credentials | Access Keys | Create Access Keys

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.17

AWS CLI - 3

- **Export the config file**
 - Add to `/home/ubuntu/.bashrc`

```
export AWS_CONFIG_FILE=$HOME/.aws/config
```

- **Try some commands:**
 - `aws help`
 - `aws command help`
 - `aws ec2 help`
 - `aws ec2 describes-instances --output text`
 - `aws ec2 describe-instances --output json`
 - `aws s3 ls`
 - `aws s3 ls vmscaleruw`

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.18

ALTERNATIVE CLI

- `sudo apt install ec2-api-tools`
- Provides more concise output
- Additional functionality
- Define variables in `.bashrc` or another sourced script:
 - `export AWS_ACCESS_KEY={your access key}`
 - `export AWS_SECRET_KEY={your secret key}`
- `ec2-describe-instances`
- `ec2-run-instances`
- `ec2-request-spot-instances`
- EC2 management from Java:
 - <http://docs.aws.amazon.com/AWSJavaSDK/latest/javadoc/index.html>

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.19

INSPECTING INSTANCE INFORMATION

- Find your instance ID:

```
curl http://169.254.169.254/  
curl http://169.254.169.254/latest/  
curl http://169.254.169.254/latest/meta-data/  
curl http://169.254.169.254/latest/meta-data/instance-id  
; echo
```
- `ec2-get-info` command (??)

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.20

PRIVATE KEY AND CERTIFICATE FILE

- Install openssl package on VM

```
# generate private key file
```

```
$openssl genrsa 2048 > mykey.pk
```

```
# generate signing certificate file
```

```
$openssl req -new -x509 -nodes -sha256 -days 36500 -key  
mykey.pk -outform PEM -out signing.cert
```

- Add signing.cert to IAM | Users | Security Credentials |
- - *new signing certificate* - -

- From: http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/setup-ami-tools.html?icmpid=docs_iam_console#ami-tools-create-certificate

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.21

PRIVATE KEY, CERTIFICATE FILE

- These files, combined with your `AWS_ACCESS_KEY` and `AWS_SECRET_KEY` and `AWS_ACCOUNT_ID` enable you to publish new images from the CLI

- Objective:

1. Configure VM with software stack
2. Burn new image for VM replication (**horizontal scaling**)

- Some folks may just install Docker. . .

- Create image script . . .

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.22

CREATE A NEW INSTANCE STORE
IMAGE SCRIPT

```
image=$1
echo "Burn image $image"
echo "$image" > image.id
mkdir /mnt/tmp
AWS_KEY_DIR=/home/ubuntu/.aws
export EC2_URL=http://ec2.amazonaws.com
export S3_URL=https://s3.amazonaws.com
export EC2_PRIVATE_KEY=${AWS_KEY_DIR}/mykey.pk
export EC2_CERT=${AWS_KEY_DIR}/signing.cert
export AWS_USER_ID={your account id}
export AWS_ACCESS_KEY={your aws access key}
export AWS_SECRET_KEY={your aws secret key}
ec2-bundle-vol -s 5000 -u ${AWS_USER_ID} -c ${EC2_CERT} -k ${EC2_PRIVATE_KEY}
--ec2cert /etc/ec2/amitools/cert-ec2.pem --no-inherit -r x86_64 -p $image -i
/etc/ec2/amitools/cert-ec2.pem
cd /tmp
ec2-upload-bundle -b tcss562 -m $image.manifest.xml -a ${AWS_ACCESS_KEY} -s
${AWS_SECRET_KEY} --url http://s3.amazonaws.com --location US
ec2-register tcss562/$image.manifest.xml --region us-east-1 --kernel aki-
88aa75e1
```

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.23

OBJECTIVES

- Cloud Enabling Technology (Ch. 5 Erl book)

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.24

CLOUD ENABLING TECHNOLOGY

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.25

CLOUD ENABLING TECHNOLOGY

- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.26

1. BROADBAND NETWORKS AND INTERNET ARCHITECTURE

- Clouds must be connected to a network
- Inter-networking: Users' network must connect to cloud's network
- Public cloud computing relies heavily on the internet

November 5, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.27

PRIVATE CLOUD NETWORKING

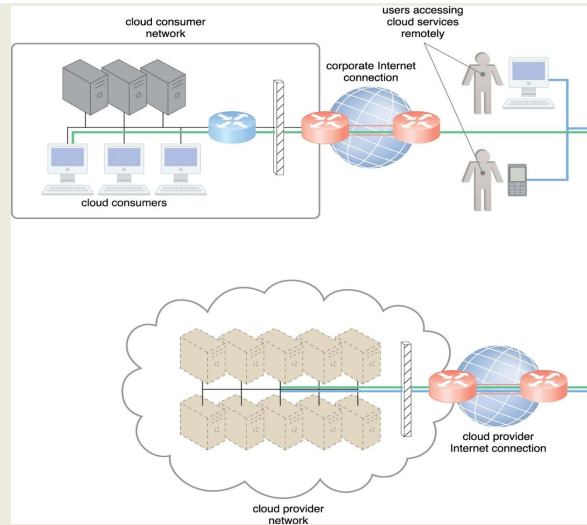

November 5, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.28

PUBLIC CLOUD NETWORKING

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.29

INTERNETWORKING KEY POINTS

- Cloud consumers and providers typically communicate via the internet
- Decentralized provisioning and management model is not controlled by the cloud consumers or providers
- Inter-networking (internet) relies on connectionless packet switching and route-based interconnectivity
- Routers and switches support communication
- Network bandwidth and latency influence QoS, which is heavily impacted by network congestion

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.30

2. DATA CENTER TECHNOLOGY

- Grouping servers together:
- Enables power sharing
- Higher efficiency in shared IT resource usage (less duplication of effort)
- Improved accessibility and organization
- Key components:
 - Virtualized and physical server resources
 - Standardized, modular hardware
 - Automation support: ease server provisioning, configuration, patching, monitoring without supervision... *tools are desirable*

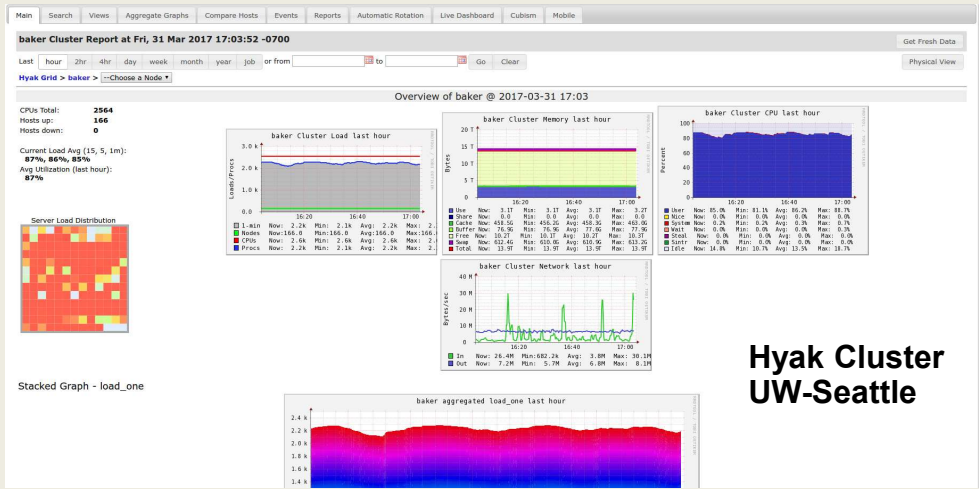

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.31

CLUSTER MANAGEMENT TOOLS

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.32

DATA CENTER TECHNOLOGY – KEY COMPONENTS

- Remote operation / management
- **High availability support:** **redundant everything**
Includes: power supplies, cabling, environmental control systems, communication links, duplicate warm replica hardware
- **Secure design:** physical and logical access control
- **Servers:** rackmount, etc.
- **Storage:** hard disk arrays (RAID), storage area network (SAN): disk array with dedicated network, network attached storage (NAS): disk array on network for NFS, etc.
- **Network hardware:** backbone routers (WAN to LAN connectivity), firewalls, VPN gateways, managed switches/routers

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.33

3. VIRTUALIZATION TECHNOLOGY

- Convert a physical IT resource into a virtual IT resource
- Servers, storage, network, power (virtual UPSs)
- Virtualization supports:
 - Hardware independence
 - Server consolidation
 - Resource replication
 - Resource pooling
 - Elastic scalability
- Virtual servers
 - Operating-system based virtualization
 - Hardware-based virtualization

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.34

VIRTUAL MACHINES

- Emulation/simulation of a computer in software
- Provides a substitute for a real computer or server
- Virtualization platforms provide functionality to run an entire operating system
- Allows running multiple different operating systems, or operating systems with different versions simultaneously on the same computer

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.35

KEY VIRTUALIZATION TRADEOFF

- Tradeoff space:

**Degree of
Hardware
Abstraction**

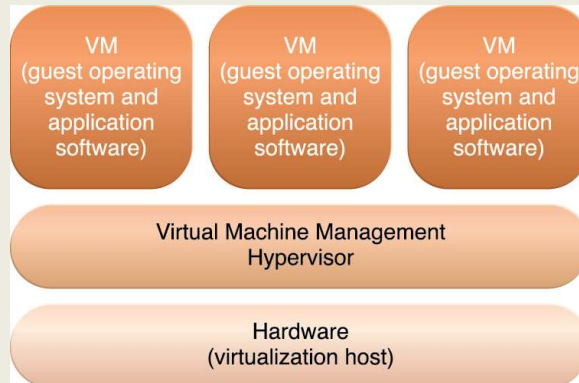

**Concerns:
Overhead
Performance
Isolation
Security**

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.36

TYPE 1 HYPERVISOR

- Host OS and VMs run atop the hypervisor
- The boot OS is the hypervisor kernel
- Xen dom0

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.37

TYPE 1 HYPERVISOR

- Acts as a control program
- Miniature OS kernel that manages VMs
- Boots and runs on bare metal
- Also known as Virtual Machine Monitor (VMM)
- Paravirtualization: Kernel includes I/O drivers
- VM guest OSes must use special kernel to interoperate
- Paravirtualization provides hooks to the guest VMs
- Kernel traps instructions (i.e. device I/O) to implement sharing & multiplexing
- User mode instructions run directly on the CPU
- Objective: minimize virtualization overhead
- Classic example is XEN (dom0 kernel)

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.38

COMMON VMMS: PARAVIRTUALIZATION

- TYPE 1
- XEN
 - Citrix Xen-server (a commercial version of XEN)
- VMWare ESXi
- KVM (virtualization support in kernel)

- Paravirtual I/O drivers introduced
 - XEN
 - KVM
 - Virtualbox

November 5, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.39

XEN - 2

- VMs managed as “domains”
- Domain 0 is the hypervisor domain
 - Host OS is installed to run on bare-metal, but doesn’t directly facilitate virtualization (*unlike KVM*)
- Domains 1..n are guests (VMs) – not bare-metal

```
xentop - 17:53:48 Xen 3.1.2-398.el5
3 domains: 1 running, 2 blocked, 0 paused, 0 crashed, 0 dying, 0 shutdown
Mem: 8379564k total, 8377876k used, 1688k free CPUs: 4 @ 2400MHz
```

NAME	STATE	CPU(sec)	CPU(%)	MEM(k)	MEM(%)	MAXMEM(k)	MAXMEM(%)	VCPUS	
NETS	NETTX(k)	NETRX(k)	VBDS	VBD RD	VBD WR	SSID			
centos	--b---		46	0.0	532352	6.4	1064960	12.7	1
1	27960	885	1	0	6313	37119	0		
centos-2	--b---		17	0.0	1056640	12.6	2113536	25.2	1
1	50	0	1	0	3981	541	0		
Domain-0	-----r		2979	19.3	6568960	78.4	no limit	n/a	4
4	1057374	290072	0	0	0	0	0		

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.41

XEN - 3

- Physical machine boots special XEN kernel
- Kernel provides paravirtual API to manage CPU & device multiplexing
- Guests require modified XEN-aware kernels
- Xen supports full-virtualization for unmodified OS guests in hvm mode
- Amazon EC2 largely based on modified version of XEN hypervisor (EC2 gens 1-4)
- XEN provides its own CPU schedulers, I/O scheduling

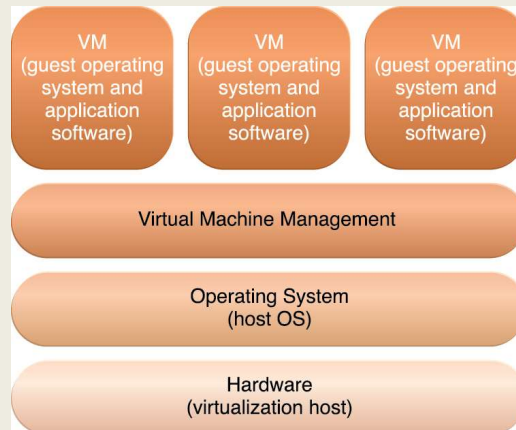

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.42

TYPE 2 HYPERVISOR

- Adds additional layer

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.43

TYPE 2 HYPERVISOR

- Problem: Original x86 CPUs could not trap special instructions
- Instructions not specially marked
- Solution: Use Full Virtualization
- Trap ALL instructions
- “Fully” simulate entire computer
- Tradeoff: Higher Overhead
- Benefit: Can virtualize any operating system without modification

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.44

KERNEL BASED VIRTUAL MACHINES (KVM)

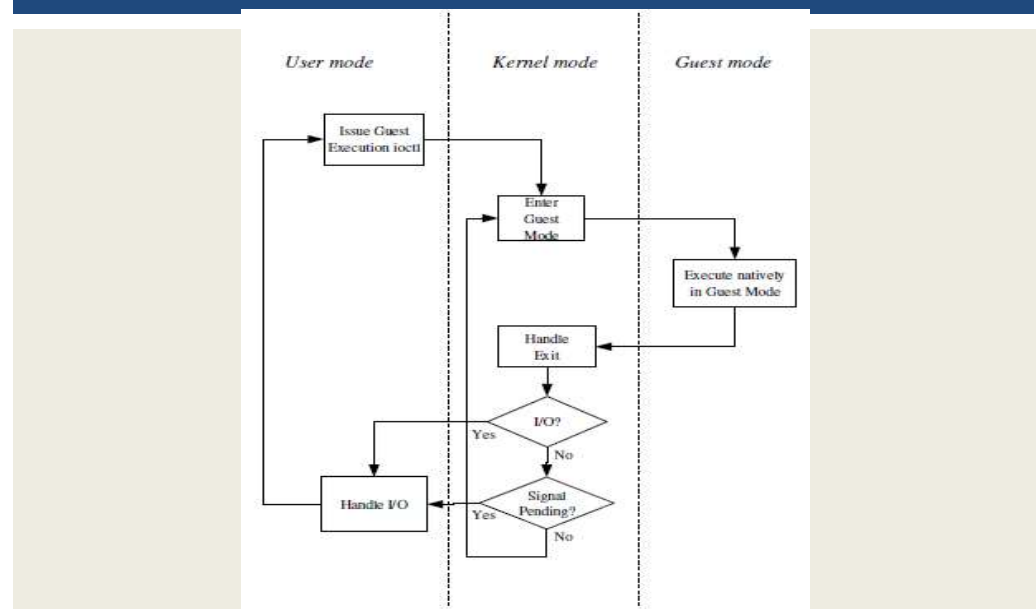

- x86 HW notoriously difficult to virtualize
- Extensions added to 64-bit Intel/AMD CPUs
 - Provides hardware assisted virtualization
 - New “guest” operating mode
 - Hardware state switch
 - Exit reason reporting
 - Intel/AMD implementations different
 - Linux uses vendor specific kernel modules

November 5, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.45

KVM - 2

KVM – 3

- KVM has /dev/kvm device file node
 - Linux character device, with operations:
 - Create new VM
 - Allocate memory to VM
 - Read/write virtual CPU registers
 - Inject interrupts into vCPUs
 - Running vCPUs
- VMs run as Linux processes
 - Scheduled by host Linux OS
 - Can be pinned to specific cores with “taskset”

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.47

KVM PARAVIRTUALIZED I/O

- KVM – Virtio
 - Custom Linux based paravirtual device drivers
 - Supersedes QEMU hardware emulation (full virt.)
 - Based on XEN paravirtualized I/O
 - Custom block device driver provides paravirtual device emulation
 - Virtual bus (memory ring buffer)
 - Requires hypercall facility
 - Direct access to memory

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.48

KVM DIFFERENCES FROM XEN

- KVM requires CPU VMX support
 - Virtualization management extensions
- KVM can virtualize any OS without special kernels
 - Less invasive
- KVM was originally separate from the Linux kernel, but then integrated
- KVM is type 1 hypervisor because the machine boots Linux which has integrated support for virtualization
- Different than XEN because XEN kernel alone is not a full-fledged OS

November 5, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.49

KVM ENHANCEMENTS

- Paravirtualized device drivers
 - Virtio
- Guest Symmetric Multiprocessor (SMP) support
 - Leverages multiple on-board CPUs
 - Supported as of Linux 2.6.23
- VM Live Migration
- Linux scheduler integration
 - Optimize scheduler with knowledge that KVM processes are virtual machines

November 5, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.50

VIRTUALIZATION MANAGEMENT

- Virtual infrastructure management (VIM) tools
- Tools that manage pools of virtual machines, resources, etc.
- Private cloud software systems can be considered as a VIM
- Considerations:
- Performance overhead
 - Paravirtualization: custom OS kernels, I/O passed directly to HW w/ special drivers
- Hardware compatibility for virtualization
- Portability: virtual resources tend to be difficult to migrate cross-clouds

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.51

VIRTUAL INFRASTRUCTURE MANAGEMENT (VIM)

- Middleware to manage virtual machines and infrastructure of IaaS “clouds”
- Examples
 - OpenNebula
 - Nimbus
 - Eucalyptus
 - OpenStack

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.52

VIM FEATURES

- Create/destroy VM Instances
- Image repository
 - Create/Destroy/Update images
 - Image persistence
- Contextualization of VMs
 - Networking address assignment
 - DHCP / Static IPs
 - Manage SSH keys

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.53

VIM FEATURES - 2

- Virtual network configuration/management
 - Public/Private IP address assignment
 - Virtual firewall management
 - Configure/support isolated VLANs (private clusters)
- Support common virtual machine managers (VMMs)
 - XEN, KVM, VMware
 - Support via libvirt library

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.54

VIM FEATURES - 3

- Shared “Elastic” block storage
 - Facility to create/update/delete VM disk volumes
 - Amazon EBS
 - Eucalyptus SC
 - OpenStack Volume Controller

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.55

4. MULTITENANT APPLICATIONS

- Each tenant (like in an apartment) has their own view of the application
- Tenants are unaware of their neighbors
- Tenants can only access their data, no access to data and configuration that is not their own
- Customizable features
 - UI, business process, data model, access control
- Application architecture
 - User isolation, data security, recovery/backup by tenant, scalability for a tenant, for tenants, metered usage, data tier isolation

November 5, 2018

TCSS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.56

MULTITENANT APPS - 2

- Forms the basis for SaaS (applications)

November 5, 2018

TCCS562: Software Engineering for Cloud Computing [Fall 2018]
School of Engineering and Technology, University of Washington - Tacoma

L12.57

WEB SERVICES/WEB

- Web services technology is a key foundation of cloud computing's "as-a-service" cloud delivery model
- SOAP – "Simple" object access protocol
 - First generation web services
 - WSDL – web services description language
 - UDDI – universal description discovery and integration
 - SOAP services have their own unique interfaces
- REST – instead of defining a custom technical interface REST services are built on the use of HTTP protocol
- HTTP GET, PUT, POST, DELETE

HYPERTEXT TRANSPORT PROTOCOL (HTTP)

- An ASCII-based request/reply protocol for transferring information on the web
- HTTP request includes:
 - request method (GET, POST, etc.)
 - Uniform Resource Identifier (URI)
 - HTTP protocol version understood by the client
 - headers—extra info regarding transfer request
- HTTP response from server
 - Protocol version & status code →
 - Response headers
 - Response body

HTTP status codes:

2xx — *all is well*
3xx — *resource moved*
4xx — *access problem*
5xx — *server error*

REST: REPRESENTATIONAL STATE TRANSFER

- Web services protocol
- *Supersedes SOAP* – Simple Object Access Protocol
- Access and manipulate web resources with a predefined set of stateless operations (known as web services)
- Requests are made to a URI
- Responses are most often in JSON, but can also be HTML, ASCII text, XML, no real limits as long as text-based
- HTTP verbs: GET, POST, PUT, DELETE, ...

REST CLIMATE SERVICES EXAMPLE

■ USDA
Lat/Long
Climate
Service
Demo

■ Just provide
a Lat/Long

```
// REST/JSON
// Request climate data for Washington

{
  "parameter": [
    {
      "name": "latitude",
      "value": 47.2529
    },
    {
      "name": "longitude",
      "value": -122.4443
    }
  ]
}
```

REST - 2

- App manipulates one or more types of resources.
- Everything the app does can be characterized as some kind of operation on one or more resources.
- Frequently services are CRUD operations (create/read/update/delete)
 - Create a new resource
 - Read resource(s) matching criterion
 - Update data associated with some resource
 - Destroy a particular a resource
- Resources are often implemented as objects in OO languages

REST ARCHITECTURAL ADVANTAGES

- **Performance:** component interactions can be the dominant factor in user-perceived performance and network efficiency
- **Scalability:** to support large numbers of services and interactions among them
- **Simplicity:** of the Uniform Interface
- **Modifiability:** of services to meet changing needs (even while the application is running)
- **Visibility:** of communication between services
- **Portability:** of services by redeployment
- **Reliability:** resists failure at the system level as redundancy of infrastructure is easy to ensure
