Upcoming Assignments

Class Activity 1 – Implicit vs. Explicit Parallelism  
Available until Oct 11 at 11:59pm | Due Oct 7 at 7:50pm | ~10 pts

Tutorial 1 - Linux  
Available until Oct 19 at 11:59pm | Due Oct 15 at 11:59pm | ~20 pts

Past Assignments

TCSS 562 - Online Daily Feedback Survey - 10/5  
Available until Oct 18 at 11:59pm | Due Oct 6 at 8:59pm | ~1 pts

TCSS 562 - Online Daily Feedback Survey - 9/30  
Available until Oct 18 at 11:59pm | Due Oct 4 at 8:59pm | ~1 pts

L12.3

TCSS 562 - Online Daily Feedback Survey - 10/5

Started: Oct 7 at 1:13am

Quiz Instructions

Question 1

0.5 pts

On a scale of 1 to 10, please classify your perspective on material covered in today's class:

12345678910

Mostly Review To MeEqual New and ReviewMostly New To Me

Question 2

0.5 pts

Please rate the pace of today's class:

12345678910

SlowJust RightFast

November 9, 2020

School of Engineering and Technology, University of Washington – Tacoma

L12.4

MATERIAL / PACE

Please classify your perspective on material covered in today's class (20 respondents):

1-mostly review, 5-equal new/review, 10-mostly new

Average – 6.30 (↓ - previous 6.74)

Please rate the pace of today's class:

1-slow, 5-just right, 10-fast

Average – 5.40 (↓ - previous 5.58)

School of Engineering and Technology, University of Washington – Tacoma

L12.5

FEEDBACK FROM 11/4

Can you please go over how to do the second part of Tutorial 4, starting from point 9 on page 22? Should we create 2 new lambda functions as we did for "hello" ?

Yes

Caesar cipher is a simple encryption method

The idea is use each character's ASCII value, and apply a numeric SHIFT to the value

Shift UP to encode

Shift DOWN to decode

'a', shift +10 → 'k'

'G', shift +30 → 'e'

Character	ASCII	Character	ASCII	Character	ASCII	Character	ASCII	Character	ASCII
A	65	a	97	0	48	A	65	a	97
B	66	b	98	1	49	B	66	b	98
C	67	c	99	2	50	C	67	c	99
D	68	d	100	3	51	D	68	d	100
E	69	e	101	4	52	E	69	e	101
F	70	f	102	5	53	F	70	f	102
G	71	g	103	6	54	G	71	g	103
H	72	h	104	7	55	H	72	h	104
I	73	i	105	8	56	I	73	i	105
J	74	j	106	9	57	J	74	j	106
K	75	k	107			K	75	k	107
L	76	l	108			L	76	l	108
M	77	m	109			M	77	m	109

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington – Tacoma

L12.6

FEEDBACK - 2

- **callservice.sh** should call the encode function with JSON (#1)
- Encode produces output (#2)
- Append the shift attribute to encode's output, and call decode to obtain JSON (#3)

(#1) Encode Input

```
{  "msg": "ServerlessComputingWithFaaS",  "shift": 22}
```

(#2) Encode Output

```
{  "value": "QanranhaaoYkllqpejc8epd8uwo",  "uuid": "036c9df1-4a1d-4993-bb69-f9fd0ab29816",  "error": "",  "vmsptime": 1539943078,  "newcontainer": 0}
```

(#3) Decode Output

```
{  "value": "ServerlessComputingWithFaaS",  "uuid": "f047b513-e611-4cac-8370-713fb2771db4",  "error": "",  "vmsptime": 1539943078,  "newcontainer": 0}
```

November 9, 2020

TCCS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.7

FEEDBACK - 3

- There is some flexibility on the coding/implementation
  - See internet for examples of Caesar cipher Java implementation
- The main objective is to complete the 2-function application that accepts a message, shifts the message, and then shifts it back. Both functions should have API gateway endpoints, and callservice.sh should orchestrate the entire "pipeline".
- Running callservice.sh should allow testing of encode & decode

November 9, 2020

TCCS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.8

FEEDBACK - 3

- Weekly tutorials are going very fast and finding little tough to keep up.
- Deadline extensions
- Tutorial 3:
  - Wed Nov 4 → Fri Nov 6
- Tutorial 4:
  - Mon Nov 9 → Fri Nov 13

November 9, 2020

CLOUD ENABLING TECHNOLOGY

November 9, 2020

TCCS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.12

CLOUD ENABLING TECHNOLOGY

- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.13

1. BROADBAND NETWORKS AND INTERNET ARCHITECTURE

- Clouds must be connected to a network
- Inter-networking: Users' network must connect to cloud's network
- Public cloud computing relies heavily on the Internet

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.14

PRIVATE CLOUD NETWORKING

The diagram illustrates a private cloud network. On the left, a cloud icon contains several server icons. A line connects this cloud to a central globe icon labeled 'corporate Internet connection'. From the globe, a line extends to the right, where it connects to a computer icon and a person icon, both labeled 'users accessing cloud services remotely'.

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.15

PUBLIC CLOUD NETWORKING

The diagram illustrates public cloud networking. It shows two main components: a 'cloud consumer network' at the top and a 'cloud provider network' at the bottom. The consumer network includes server and computer icons. The provider network includes server rack icons. A central globe icon labeled 'corporate Internet connection' is connected to both networks. To the right, a person icon is shown with a line connecting to the consumer network, labeled 'users accessing cloud services remotely'.

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.16

INTERNETWORKING KEY POINTS

- Cloud consumers and providers typically communicate via the internet
- Decentralized provisioning and management model is not controlled by the cloud consumers or providers
- Inter-networking (internet) relies on connectionless packet switching and route-based interconnectivity
- Routers and switches support communication
- Network bandwidth and latency influence QoS, which is heavily impacted by network congestion

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.17

CLOUD ENABLING TECHNOLOGY

- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.18

2. DATA CENTER TECHNOLOGY

- Grouping servers together (clusters):
- Enables power sharing
- Higher efficiency in shared IT resource usage (less duplication of effort)
- Improved accessibility and organization

- Key components:
  - Virtualized and physical server resources
  - Standardized, modular hardware
  - Automation support: ease server provisioning, configuration, patching, monitoring without supervision... *tools are desirable*

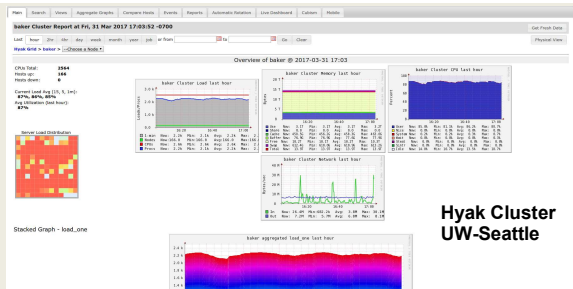

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.19

CLUSTER MANAGEMENT TOOLS

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.20

DATA CENTER TECHNOLOGY – KEY COMPONENTS

- Remote operation / management
- **High availability support:** \*\*redundant everything\*\* Includes: power supplies, cabling, environmental control systems, communication links, duplicate warm replica hardware
- **Secure design:** physical and logical access control
- **Servers:** rackmount, etc.
- **Storage:** hard disk arrays (RAID), storage area network (SAN): disk array with dedicated network, network attached storage (NAS): disk array on network for NFS, etc.
- **Network hardware:** backbone routers (WAN to LAN connectivity), firewalls, VPN gateways, managed switches/routers

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.21

CLOUD ENABLING TECHNOLOGY

- Broadband networks and internet architecture
- Data center technology
- **Virtualization technology**
- Multitenant technology
- Web/web services technology

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.22

3. VIRTUALIZATION TECHNOLOGY

- Convert a physical IT resource into a virtual IT resource
- Servers, storage, network, power (virtual UPSs)
- Virtualization supports:
  - Hardware independence
  - Server consolidation
  - Resource replication
  - Resource pooling
  - Elastic scalability
- Virtual servers
  - Operating-system based virtualization
  - Hardware-based virtualization

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.23

VIRTUAL MACHINES

- Emulation/simulation of a computer in software
- Provides a substitute for a real computer or server
- Virtualization platforms provide functionality to run an entire operating system
- Allows running multiple different operating systems, or operating systems with different versions simultaneously on the same computer

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.24

KEY VIRTUALIZATION TRADEOFF

Tradeoff space:  
What is the “right” level of abstraction?

Degree of Hardware Abstraction

Abstraction Concerns:

Overhead

Performance

Isolation

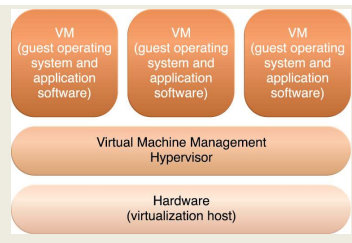

Security

November 9, 2020

TCCS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.25

TYPE 1 HYPERVISOR

Host OS and VMs run atop the hypervisor

The boot OS is the hypervisor kernel

Xen dom0

November 9, 2020

TCCS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.26

TYPE 1 HYPERVISOR

Acts as a control program

Miniature OS kernel that manages VMs

Boots and runs on bare metal

Also known as Virtual Machine Monitor (VMM)

Paravirtualization: Kernel includes I/O drivers

VM guest OSeS must use special kernel to interoperate

Paravirtualization provides hooks to the guest VMs

Kernel traps instructions (i.e. device I/O) to implement sharing & multiplexing

User mode instructions run directly on the CPU

Objective: minimize virtualization overhead

Classic example is XEN (dom0 kernel)

November 9, 2020

TCCS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.27

COMMON VMMS: PARAVIRTUALIZATION

TYPE 1

XEN

Citrix Xen-server (a commercial version of XEN)

VMWare ESXi

KVM (virtualization support in kernel)

Paravirtual I/O drivers introduced

XEN

KVM

Virtualbox

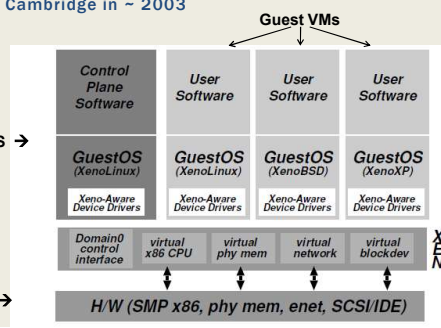

November 9, 2020

TCCS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.28

XEN

Developed at Cambridge in ~ 2003

XEN - 2

VMs managed as “domains”

Domain 0 is the hypervisor domain

Host OS is installed to run on bare-metal, but doesn't directly facilitate virtualization (unlike KVM)

Domains 1..n are guests (VMs) – not bare-metal

```

kentop - 17:53:48  Xen 3.1.2-398.el5
3 domains: 1 running, 2 blocked, 0 paused, 0 crashed, 0 dying, 0 shutdown
Mem: 8379564k total, 8377876k used, 1688k free  CPUs: 4 @ 2400MHz

```

	NAME	STATE	CPU(sec)	CPU(%)	MEM(k)	MEM(%)	MAXMEM(k)	MAXMEM(%)	VCPUS
NETS	NETIX(k)	NETRX(k)	VBDs	VBD OO	VBD RD	VBD WR	SSII		
centos	--b---		885	1	0	532352	6.4	1064960	12.7
1	27960			17	0.0	0	6313	37119	0
centos-2	--b---					1056640	12.6	2113536	25.2
1	50		0	1	0	3981	541	0	
Domain-0	-----r		2979	19.3		6568960	78.4	no limit	n/a
4	1057374	290072		0	0	0	0	0	

November 9, 2020

TCCS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.30

XEN - 3

- Physical machine boots special XEN kernel
- Kernel provides paravirtual API to manage CPU & device multiplexing
- Guests require modified XEN-aware kernels
- Xen supports full-virtualization for unmodified OS guests in hvm mode
- Amazon EC2 largely based on modified version of XEN hypervisor (EC2 gens 1-4)
- XEN provides its own CPU schedulers, I/O scheduling

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.31

TYPE 2 HYPERVISOR

- Adds additional layer

```
graph TD; VM1[VM guest operating system and application software] --- VMM[Virtual Machine Management]; VM2[VM guest operating system and application software] --- VMM; VM3[VM guest operating system and application software] --- VMM; VMM --- OS[Operating System host OS]; OS --- HW[Hardware virtualization host];
```

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.32

TYPE 2 HYPERVISOR

- Problem: Original x86 CPUs could not trap special instructions
- Instructions not specially marked
- Solution: Use Full Virtualization
- Trap ALL instructions
- “Fully” simulate entire computer
- Tradeoff: Higher Overhead
- Benefit: Can virtualize any operating system without modification

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.33

KERNEL BASED VIRTUAL MACHINES (KVM)

- x86 HW notoriously difficult to virtualize
- Extensions added to 64-bit Intel/AMD CPUs
  - Provides hardware assisted virtualization
  - New “guest” operating mode
  - Hardware state switch
  - Exit reason reporting
  - Intel/AMD implementations different
    - Linux uses vendor specific kernel modules

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.34

KVM - 2

```
graph TD; subgraph User_mode; IOTE[Isote Guest Execution tech]; HIO[Handle I/O]; end; subgraph Kernel_mode; EGM[Enter Guest Mode]; HEXIT[Handle Exit]; IRCP{iRCP?}; SPP{Signal Pending?}; end; subgraph Guest_mode; ENIGM[Execute natively in Guest Mode]; end; IOTE --> EGM; EGM --> ENIGM; ENIGM --> HEXIT; HEXIT --> IRCP; IRCP -- Yes --> HIO; IRCP -- No --> SPP; SPP -- Yes --> HIO; SPP -- No --> ENIGM; HIO --> IOTE;
```

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.36

KVM - 3

- KVM has /dev/kvm device file node
- Linux character device, with operations:
  - Create new VM
  - Allocate memory to VM
  - Read/write virtual CPU registers
  - Inject interrupts into vCPUs
  - Running vCPUs
- VMs run as Linux processes
- Scheduled by host Linux OS
- Can be pinned to specific cores with “taskset”

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.36

## KVM PARAVIRTUALIZED I/O

- KVM – Virtio
  - Custom Linux based paravirtual device drivers
  - Supersedes QEMU hardware emulation (full virt.)
  - Based on XEN paravirtualized I/O
  - Custom block device driver provides paravirtual device emulation
    - Virtual bus (memory ring buffer)
    - Requires hypercall facility
    - Direct access to memory

November 9, 2020

TCS5562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.37

## KVM DIFFERENCES FROM XEN

- KVM requires CPU VMX support
  - Virtualization management extensions
- KVM can virtualize any OS without special kernels
  - Less invasive
- KVM was originally separate from the Linux kernel, but then integrated
- KVM is type 1 hypervisor because the machine boots Linux which has integrated support for virtualization
- Different than XEN because XEN kernel alone is not a full-fledged OS

November 9, 2020

TCS5562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.38

## KVM ENHANCEMENTS

- Paravirtualized device drivers
  - Virtio
- Guest Symmetric Multiprocessor (SMP) support
  - Leverages multiple on-board CPUs
  - Supported as of Linux 2.6.23
- VM Live Migration
- Linux scheduler integration
  - Optimize scheduler with knowledge that KVM processes are virtual machines

November 9, 2020

TCS5562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.39

## VIRTUALIZATION MANAGEMENT

- Virtual infrastructure management (VIM) tools
- Tools that manage pools of virtual machines, resources, etc.
- Private cloud software systems can be considered as a VIM
- Considerations:
  - Performance overhead
    - Paravirtualization: custom OS kernels, I/O passed directly to HW w/ special drivers
  - Hardware compatibility for virtualization
- Portability: virtual resources tend to be difficult to migrate cross-clouds

November 9, 2020

TCS5562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.40

## VIRTUAL INFRASTRUCTURE MANAGEMENT (VIM)

- Middleware to manage virtual machines and infrastructure of IaaS “clouds”
- Examples
  - OpenNebula
  - Nimbus
  - Eucalyptus
  - OpenStack

November 9, 2020

TCS5562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.41

## VIM FEATURES

- Create/destroy VM Instances
- Image repository
  - Create/Destroy/Update images
  - Image persistence
- Contextualization of VMs
  - Networking address assignment
    - DHCP / Static IPs
  - Manage SSH keys

November 9, 2020

TCS5562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.42

VIM FEATURES - 2

- Virtual network configuration/management
  - Public/Private IP address assignment
  - Virtual firewall management
  - Configure/support isolated VLANs (private clusters)
- Support common virtual machine managers (VMMs)
  - XEN, KVM, VMware
  - Support via libvirt library

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.43

VIM FEATURES - 3

- Shared “Elastic” block storage
  - Facility to create/update/delete VM disk volumes
    - Amazon EBS
    - Eucalyptus SC
    - OpenStack Volume Controller

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.44

CONTAINER ORCHESTRATION FRAMEWORKS

- Middleware to manage Docker application container deployments across virtual clusters of Docker hosts (VMs)
- Considered Infrastructure-as-a-Service
- Opensource
  - Kubernetes framework
  - Docker swarm
  - Apache Mesos/Marathon
- Proprietary
  - Amazon Elastic Container Service

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.45

CONTAINER SERVICES

- Public cloud container cluster services
  - Azure Kubernetes Service (AKS)
  - Amazon Elastic Container Service for Kubernetes (EKS)
  - Google Kubernetes Engine (GKE)
- Container-as-a-Service
  - Azure Container Instances (ACI – April 2018)
  - AWS Fargate (November 2017)
  - Google Kubernetes Engine Serverless Add-on (alpha-July 2018)

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.46

CLOUD ENABLING TECHNOLOGY

- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.47

4. MULTITENANT APPLICATIONS

- Each tenant (like in an apartment) has their own view of the application
- Tenants are unaware of their neighbors
- Tenants can only access their data, no access to data and configuration that is not their own
- Customizable features
  - UI, business process, data model, access control
- Application architecture
  - User isolation, data security, recovery/backup by tenant, scalability for a tenant, for tenants, metered usage, data tier isolation

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.48

Slides by Wes J. Lloyd

L12.8

MULTITENANT APPS - 2

- Forms the basis for SaaS (applications)

The diagram illustrates a multitenant architecture. Two boxes at the top represent 'Organization A' and 'Organization B'. Inside each box is a 'cloud service consumer'. Arrows from these consumers point down to a central cloud icon labeled 'multitenant application'. Below the cloud is a 'hosting virtual server'.

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.49

CLOUD ENABLING TECHNOLOGY

- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.50

5. WEB SERVICES/WEB

- Web services technology is a key foundation of cloud computing's "as-a-service" cloud delivery model
- SOAP – "Simple" object access protocol
  - First generation web services
  - WSDL – web services description language
  - UDDI – universal description discovery and integration
  - SOAP services have their own unique interfaces
- REST – instead of defining a custom technical interface REST services are built on the use of HTTP protocol
- HTTP GET, PUT, POST, DELETE

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.51

HYPERTEXT TRANSPORT PROTOCOL (HTTP)

- An ASCII-based request/reply protocol for transferring information on the web
- HTTP request includes:
  - request method (GET, POST, etc.)
  - Uniform Resource Identifier (URI)
  - HTTP protocol version understood by the client
  - headers—extra info regarding transfer request
- HTTP response from server
  - Protocol version & status code →
  - Response headers
  - Response body

November 9, 2020

TCSS562: Software Engineering for Cloud Computing [Fall 2020]  
School of Engineering and Technology, University of Washington - Tacoma

L12.52

HTTP status codes:

2xx — all is well

3xx — resource moved

4xx — access problem

5xx — server error

REST: REPRESENTATIONAL STATE TRANSFER

- Web services protocol
- Supersedes SOAP – Simple Object Access Protocol
- Access and manipulate web resources with a predefined set of stateless operations (known as web services)
- Requests are made to a URI
- Responses are most often in JSON, but can also be HTML, ASCII text, XML, no real limits as long as text-based
- HTTP verbs: GET, POST, PUT, DELETE, ...

REST CLIMATE SERVICES EXAMPLE

■ USDA  
Lat/Long  
Climate  
Service  
Demo

```
// REST/JSON
// Request climate data for Washington

{
  "parameter": [
    {
      "name": "latitude",
      "value": 47.2529
    },
    {
      "name": "longitude",
      "value": -122.4443
    }
  ]
}
```

■ Just provide  
a Lat/Long

L12.57

REST - 2

- App manipulates one or more types of resources.
- Everything the app does can be characterized as some kind of operation on one or more resources.
- Frequently services are CRUD operations (create/read/update/delete)
  - Create a new resource
  - Read resource(s) matching criterion
  - Update data associated with some resource
  - Destroy a particular a resource
- Resources are often implemented as objects in OO languages

REST ARCHITECTURAL ADVANTAGES

- **Performance:** component interactions can be the dominant factor in user-perceived performance and network efficiency
- **Scalability:** to support large numbers of services and interactions among them
- **Simplicity:** of the Uniform Interface
- **Modifiability:** of services to meet changing needs (even while the application is running)
- **Visibility:** of communication between services
- **Portability:** of services by redeployment
- **Reliability:** resists failure at the system level as redundancy of infrastructure is easy to ensure
