University of Washington – Tacoma

TR 5:00-7:00 PM

1

OFFICE HOURS – FALL 2021

■ **Tuesdays:**

■ 4:00 to 4:30 pm - CP 229

■ 7:15 to 7:45+ pm – ONLINE via Zoom

■ **Thursdays**

■ 4:15 to 4:45 pm – ONLINE via Zoom

■ 7:15 to 7:45+ pm – ONLINE via Zoom

■ Or email for appointment

■ Zoom Link sent as Canvas Announcement

> Office Hours set based on Student Demographics survey feedback

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.2

2

OBJECTIVES – 11/9

■ **Questions from 11/4**

■ Tutorial 6 - Intro to FaaS III - Serverless Databases

■ Tutorial 4 – Intro to FaaS – AWS Lambda

■ Tutorial 5 – Intro to FaaS II – Files in S3, CloudWatch

■ Term Project Proposals – please update if requested

■ Quiz 1 on Canvas available: Nov 10th 8am - Nov 14th 11:59pm

■ Ch. 5: Cloud Enabling Technology

■ Team planning

November 9, 2021

Upcoming Assignments

Class Activity 1 – Implicit vs. Explicit Parallelism
Available until Oct 13 at 11:59pm | Due Oct 7 at 7:59pm | ~10 pts

Tutorial 1 - Linux
Available until Oct 19 at 11:59pm | Due Oct 13 at 11:59pm | ~20 pts

Past Assignments

TCSS 562 - Online Daily Feedback Survey - 10/5
Available until Dec 18 at 11:59pm | Due Oct 6 at 8:59pm | ~10 pts

TCSS 562 - Online Daily Feedback Survey - 9/30
Available until Dec 18 at 11:59pm | Due Oct 4 at 8:59pm | ~10 pts

TCSS 562 - Online Daily Feedback Survey - 10/5

Started: Oct 7 at 1:13am

Quiz Instructions

Question 1

0.5 pts

On a scale of 1 to 10, please classify your perspective on material covered in today's class:

1

2

3

4

5

6

7

8

9

10

Mostly Review To Me

Equal New and Review

Mostly New To Me

Question 2

0.5 pts

Please rate the pace of today's class:

1

2

3

4

5

6

7

8

9

10

Slow

Just Right

Fast

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.5

5

MATERIAL / PACE

■ Please classify your perspective on material covered in today's class (28 respondents):

■ 1-mostly review, 5-equal new/review, 10-mostly new

■ Average – 6.18 (↑ - previous 6.04)

■ Please rate the pace of today's class:

■ 1-slow, 5-just right, 10-fast

■ Average – 5.54 (↑ - previous 5.20)

November 9, 2021

CLOUD ENABLING TECHNOLOGY

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.14

14

CLOUD ENABLING TECHNOLOGY

- Adapted from Ch. 5 from *Cloud Computing Concepts, Technology & Architecture*
- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.15

15

1. BROADBAND NETWORKS AND INTERNET ARCHITECTURE

- Clouds must be connected to a network
- Inter-networking: Users' network must connect to cloud's network
- Public cloud computing relies heavily on the **Internet**

November 9, 2021

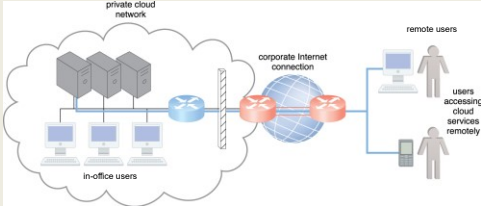

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.16

16

PRIVATE CLOUD NETWORKING

- For institutions with in-house private clouds

November 9, 2021

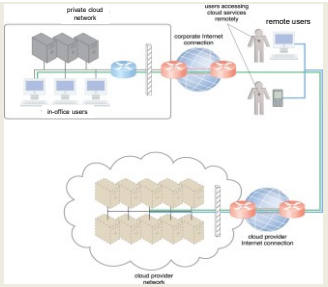

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.17

17

PUBLIC CLOUD NETWORKING

- Resources can be extended by adding public cloud
- Places further dependency on the internet to provide connectivity

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.18

18

INTERNETWORKING KEY POINTS

- Cloud consumers and providers typically communicate via the internet
- Decentralized provisioning and management model is not controlled by the cloud consumers or providers
- Inter-networking (internet) relies on connectionless packet switching and route-based interconnectivity
- Routers and switches support communication
- Network bandwidth and latency influence QoS, which is heavily impacted by network congestion

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.19

19

CLOUD ENABLING TECHNOLOGY

- Adapted from Ch. 5 from Cloud Computing Concepts, Technology & Architecture
- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.20

20

2. DATA CENTER TECHNOLOGY

- Grouping servers together (clusters):
 - Enables power sharing
 - Higher efficiency in shared IT resource usage (less duplication of effort)
 - Improved accessibility and organization
- Key components:
 - Virtualized and physical server resources
 - Standardized, modular hardware
 - Automation support: enable server provisioning, configuration, patching, monitoring without supervision... **tool/API support is desirable**

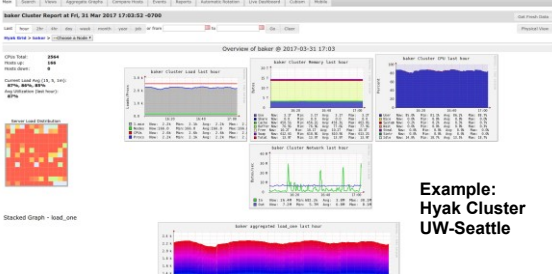

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.21

21

CLUSTER MANAGEMENT TOOLS

Example: Hyak Cluster UW-Seattle

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.22

22

DATA CENTER TECHNOLOGY - KEY COMPONENTS

- Remote operation / management
- High availability support:** **redundant everything**
Includes: power supplies, cabling, environmental control systems, communication links, duplicate warm replica HW
- Secure design:** physical and logical access control
- Servers:** rackmount, etc.
- Storage:** hard disk arrays (RAID)
- storage area network (SAN): disk array w/ multiple servers (individual nodes w/ disks) and a dedicated network
- network attached storage (NAS): inexpensive single node with collection of disks, provides shared filesystems, for NFS, etc.
- Network hardware:** backbone routers (WAN to LAN connectivity), firewalls, VPN gateways, managed switches/routers

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.23

23

CLOUD ENABLING TECHNOLOGY

- Broadband networks and internet architecture
- Data center technology
- Virtualization technology
- Multitenant technology
- Web/web services technology

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.24

24

3. VIRTUALIZATION TECHNOLOGY

- Convert a physical IT resource into a virtual IT resource
- Servers, storage, network, power (virtual UPSs)
- Virtualization supports:
 - Hardware independence
 - Server consolidation
 - Resource replication
 - Resource pooling
 - Elastic scalability
- Virtual servers
 - Operating-system based virtualization
 - Hardware-based virtualization

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.25

25

VIRTUAL MACHINES

- Emulation/simulation of a computer in software
- Provides a substitute for a real computer or server
- Virtualization platforms provide functionality to run an entire operating system
- Allows running multiple different operating systems, or operating systems with different versions simultaneously on the same computer

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.26

26

KEY VIRTUALIZATION TRADEOFF

- Tradeoff space:

What is the “right” level of abstraction in the cloud for sharing resources with users?

Degree of Hardware Abstraction

Abstraction Concerns:

- Overhead
- Performance
- Isolation
- Security

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.27

27

ABSTRACTION CONCERNS

- Overhead with too many instances w/ heavy abstractions
 - Too many instances using a heavy abstraction can lead to hidden resource utilization and waste
 - Example: Dedicated server with 48 VMs each with separate instance of Ubuntu Linux
 - Idle VMs can reduce performance of co-resident jobs/tasks
- “Virtualization” Overhead
 - Cost of virtualization an OS instance
 - Overhead has dropped from ~100% to ~1% over last decade
- Performance
 - Impacted by weight of abstraction and virtualization overhead

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.28

28

ABSTRACTION CONCERNS - 2

- Isolation
 - From others:
What user A does should not impact user B in any noticeable way
- Security
 - User A and user B's data should be always separate
 - User A's actions are not perceivable by User B

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.29

29

TYPES OF ABSTRACTION IN THE CLOUD

- Virtual Machines – original IaaS cloud abstraction
- OS and Application Containers – seen with CaaS
 - OS Container – replacement for VM, mimics full OS instance, heavier
 - OS containers run 100s of processes just like a VM
 - App Container – Docker: packages dependencies to easily transport and run an application anywhere
 - Application containers run only a few processes
- Micro VMs – FaaS / CaaS
 - Lighter weight alternative to full VM (KVM, XEN, VirtualBox)
 - Firecracker
- Unikernel Operating Systems – research mostly
 - Single process, multi-thread operating system
 - Designed for cloud, objective to reduce overhead of running too many OS instances

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.30

30

VIRTUAL MACHINES

- **Type 1 hypervisor**
 - Typically involves a special virtualization kernel that runs directly on the system to share the underlying machine with many guest VMs
 - Paravirtualization introduced to directly share system resources with guests bypassing full emulation
 - VM becomes equal participant in sharing the network card for example
- **Type 2 hypervisor**
 - Typically involves the **Full Virtualization** of the guest, where everything is simulated/emulated
- Hardware level support (i.e. features introduced on CPUs) have made virtualization faster in all respects shrinking virtualization overhead

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.31

31

TYPE 1 HYPERVISOR

```
graph TD
    VM1[VM guest operating system and application software]
    VM2[VM guest operating system and application software]
    VM3[VM guest operating system and application software]
    VMMH[Virtual Machine Management Hypervisor]
    HW[Hardware virtualization host]
    VM1 --- VMMH
    VM2 --- VMMH
    VM3 --- VMMH
    VMMH --- HW
```

- Host OS and VMs run atop the hypervisor
- The boot OS is the hypervisor kernel
- Xen dom0

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.32

32

TYPE 1 HYPERVISOR

- Acts as a control program
- Miniature OS kernel that manages VMs
- Boots and runs on bare metal
- Also known as Virtual Machine Monitor (VMM)
- **Paravirtualization:** Kernel includes I/O drivers
- VM guest OSes must use special kernel to interoperate
- Paravirtualization provides hooks to the guest VMs
- Kernel traps instructions (i.e. device I/O) to implement sharing & multiplexing
- User mode instructions run directly on the CPU
- **Objective: minimize virtualization overhead**
- Classic example is XEN (dom0 kernel)

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.33

33

COMMON VMMS: PARAVIRTUALIZATION

- **TYPE 1 Hypervisor**
- XEN
- Citrix Xen-server (a commercial version of XEN)
- VMWare ESXi
- KVM (virtualization support in kernel)
- Paravirtual I/O drivers introduced
 - XEN
 - KVM
 - Virtualbox

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.34

34

XEN

- Developed at Cambridge in ~ 2003

```
graph TD
    subgraph Host_OS [Host OS]
        CP[Control Plane Software]
    end
    subgraph Guest_VM [Guest VMs]
        US1[User Software]
        US2[User Software]
        US3[User Software]
    end
    subgraph Guest_OS [GuestOS]
        GL[XenoLinux]
        GB[XenoBSD]
        GX[XenoXP]
    end
    subgraph XA [Xeno-Aware Device Drivers]
        XAD1[Xeno-Aware Device Drivers]
        XAD2[Xeno-Aware Device Drivers]
        XAD3[Xeno-Aware Device Drivers]
    end
    subgraph XEN_kernel [XEN kernel]
        DCI[Domain0 control interface]
        VCPU[virtual x86 CPU]
        VPM[virtual phy mem]
        VNET[virtual network]
        VBDEV[virtual blockdev]
    end
    subgraph Physical_Machine [Physical Machine]
        HW[H/W SMP x86, phy mem, enet, SCSI/IDE]
    end
    Host_OS --> Guest_OS
    Guest_VM --> Guest_OS
    Guest_OS --> XA
    XA --> XEN_kernel
    XEN_kernel --> Physical_Machine
```

35

XEN - 2

- VMs managed as "domains"
- Domain 0 is the hypervisor domain
 - Host OS is installed to run on bare-metal, but doesn't directly facilitate virtualization (unlike KVM)
- Domains 1..n are guests (VMs) - not bare-metal

```
kentop - 17:53:48 Xen 3.1.2-398.el5
8 domains: 1 running, 2 blocked, 0 paused, 0 crashed, 0 dying, 0 shutdown
Mem: 8379564k total, 6377876k used, 1688k free CPUs: 4 @ 2400MHz
NAME STATE CPU(sec) CPU(%) MEM(k) MEM(%) MAXMEM(k) MAXMEM(%) VCPUS

```

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.36

36

XEN - 3

- Physical machine boots special XEN kernel
- Kernel provides paravirtual API to manage CPU & device multiplexing
- Guests require modified XEN-aware kernels
- Xen supports full-virtualization for unmodified OS guests in hvm mode
- Amazon EC2 largely based on modified version of XEN hypervisor (EC2 gens 1-4)
- XEN provides its own CPU schedulers, I/O scheduling

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.37

37

TYPE 2 HYPERVISOR

- Adds additional layer

```
graph TD; VM1[VM<br/>(guest operating system and application software)] --- VMM[Virtual Machine Management]; VM2[VM<br/>(guest operating system and application software)] --- VMM; VM3[VM<br/>(guest operating system and application software)] --- VMM; VMM --- OS[Operating System<br/>(host OS)]; OS --- HW[Hardware<br/>(virtualization host)];
```

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.38

38

TYPE 2 HYPERVISOR

- Problem: Original x86 CPUs could not trap special instructions
- Instructions not specially marked
- Solution: Use Full Virtualization
- Trap ALL instructions
- "Fully" simulate entire computer
- Tradeoff: Higher Overhead
- Benefit: Can virtualize any operating system without modification

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.39

39

CHECK FOR VIRTUALIZATION SUPPORT

- See: <https://cyberciti.biz/faq/linux-xen-vmware-kvm-intel-vt-amd-v-support>
- # check for Intel VT CPU virtualization extensions on Linux
`grep -color vmx /proc/cpuinfo`
- # check for AMD V CPU virtualization extensions on Linux
`grep -color svm /proc/cpuinfo`
- Also see 'lscpu' → "Virtualization:"
- Other Intel CPU features that help virtualization:
`ept vpid tpr_shadow flexpriority vnmi`

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.40

40

KERNEL BASED VIRTUAL MACHINES (KVM)

- x86 HW notoriously difficult to virtualize
- Extensions added to 64-bit Intel/AMD CPUs
 - Provides hardware assisted virtualization
 - New "guest" operating mode
 - Hardware state switch
 - Exit reason reporting
 - Intel/AMD implementations different
 - Linux uses vendor specific kernel modules

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.41

41

KVM - 2

```
graph TD; subgraph User_mode; UI[Enter Guest Execution in User mode]; UO[Handle I/O]; end; subgraph Kernel_mode; KM[Enter Guest Mode]; KE[Handle Exit]; KOP{IOP?}; KSP{Signal Pending?}; end; subgraph Guest_mode; GM[Execute natively in Guest Mode]; end; UI --> KM; KM --> GM; GM --> KE; KE --> KOP; KOP -- Yes --> UO; KOP -- No --> KSP; KSP -- Yes --> UO; KSP -- No --> GM;
```

42

KVM – 3

- KVM has /dev/kvm device file node
 - Linux character device, with operations:
 - Create new VM
 - Allocate memory to VM
 - Read/write virtual CPU registers
 - Inject interrupts into vCPUs
 - Running vCPUs
- VMs run as Linux processes
 - Scheduled by host Linux OS
 - Can be pinned to specific cores with “taskset”

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.43

43

KVM PARAVIRTUALIZED I/O

- KVM – Virtio
 - Custom Linux based paravirtual device drivers
 - Supersedes QEMU hardware emulation (full virt.)
 - Based on XEN paravirtualized I/O
 - Custom block device driver provides paravirtual device emulation
 - Virtual bus (memory ring buffer)
 - Requires hypercall facility
 - Direct access to memory

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.44

44

KVM DIFFERENCES FROM XEN

- KVM requires CPU VMX support
 - Virtualization management extensions
- KVM can virtualize any OS without special kernels
 - Less invasive
- KVM was originally separate from the Linux kernel, but then integrated
- KVM is type 1 hypervisor because the machine boots Linux which has integrated support for virtualization
- Different than XEN because XEN kernel alone is not a full-fledged OS

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.45

45

KVM ENHANCEMENTS

- Paravirtualized device drivers
 - Virtio
- Guest Symmetric Multiprocessor (SMP) support
 - Leverages multiple on-board CPUs
 - Supported as of Linux 2.6.23
- VM Live Migration
- Linux scheduler integration
 - Optimize scheduler with knowledge that KVM processes are virtual machines

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.46

46

WE WILL RETURN AT
~6:10 PM

47

FIRECRACKER MICRO VM

The following diagram depicts an example host running Firecracker microVMs. [From https://firecracker-microvm.github.io/](https://firecracker-microvm.github.io/)

Configuration microVMs across CPU and memory, running as user space processes.

48

FIRECRACKER MICRO VM

- Provides a virtual machine monitor (VMM) (i.e. hypervisor) using KVM to create and manage microVMs
- Has a minimalist design with goals to improve security, decreases the startup time, and increases hardware utilization
- Excludes unnecessary devices and guest functionality to reduce memory footprint and attack surface area of each microVM
- Supports boot time of <125ms, <5 MiB memory footprint
- Can run 100s of microVMs on a host, launching up to 150/sec
- Is available on 64-bit Intel, AMD, and Arm CPUs
- Used to host AWS Lambda and AWS Fargate
- Has been open sourced under the Apache 2.0 license

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.49

49

FIRECRACKER - 2

- Minimalistic**
- MicroVMs run as separate processes on the host
- Only 5 emulated devices are available: virtio-net, virtio-block, virtio-vsock, serial console, and a minimal keyboard controller used only to stop the microVM
- Rate limiters can be created and configured to provision resources to support bursts or specific bandwidth/operation limitations
- Configuration**
- A RESTful API enables common actions such as configuring the number of vCPUs or launching microVMs
- A metadata service between the host and guest provides configuration information

FIRECRACKER - 2

- Security**
- Runs in user space (**not the root user**) on top of the Linux Kernel-based Virtual Machine (KVM) hypervisor to create microVMs
- Lambda functions, Fargate containers, or container groups can be encapsulated using Firecracker through KVM, enabling workloads from different customers to run on the same machine, without sacrificing security or efficiency
- MicroVMs are further isolated with common Linux user-space security barriers using a companion program called "jailer" which provides a second line of defense if KVM is compromised

L12.51

51

UNIKERNELS

- Lightweight alternative to containers and VMs
 - Custom Cloud Operating System
 - Single process, multiple threads, runs one program
 - Launch separately atop of hypervisor (XEN/KVM)
 - Reduce overhead, duplication of heavy weight OS
- OSv is most well known unikernel
- Several others exist has research projects
- More information at: <http://unikernel.org/>
- Google Trends OSv

52

VIRTUALIZATION MANAGEMENT

- Virtual infrastructure management (VIM) tools
- Tools that manage pools of virtual machines, resources, etc.
- Private cloud software systems can be considered as a VIM
- Considerations:
 - Performance overhead
 - Paravirtualization: custom OS kernels, I/O passed directly to HW w/ special drivers
- Hardware compatibility for virtualization
- Portability: virtual resources tend to be difficult to migrate cross-clouds

L12.53

53

VIRTUAL INFRASTRUCTURE MANAGEMENT (VIM)

- Middleware to manage virtual machines and infrastructure of IaaS "clouds"
- Examples
 - OpenNebula
 - Nimbus
 - Eucalyptus
 - OpenStack

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.54

54

VIM FEATURES

- Create/destroy VM Instances
- Image repository
 - Create/Destroy/Update images
 - Image persistence
- Contextualization of VMs
 - Networking address assignment
 - DHCP / Static IPs
 - Manage SSH keys

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.55

55

VIM FEATURES - 2

- Virtual network configuration/management
 - Public/Private IP address assignment
 - Virtual firewall management
 - Configure/support isolated VLANs (private clusters)
- Support common virtual machine managers (VMMs)
 - XEN, KVM, VMware
 - Support via libvirt library

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.56

56

VIM FEATURES - 3

- Shared "Elastic" block storage
 - Facility to create/update/delete VM disk volumes
 - Amazon EBS
 - Eucalyptus SC
 - OpenStack Volume Controller

57

CONTAINER ORCHESTRATION FRAMEWORKS

- Middleware to manage Docker application container deployments across virtual clusters of Docker hosts (VMs)
- Considered Infrastructure-as-a-Service
- Opensource
 - Kubernetes framework
 - Docker swarm
 - Apache Mesos/Marathon
- Proprietary
 - Amazon Elastic Container Service

L12.60

60

4. MULTITENANT APPLICATIONS

- Each tenant (like in an apartment) has their own view of the application
- Tenants are unaware of their neighbors
- Tenants can only access their data, no access to data and configuration that is not their own

- Customizable features
 - UI, business process, data model, access control
- Application architecture
 - User isolation, data security, recovery/backup by tenant, scalability for a tenant, for tenants, metered usage, data tier isolation

63

5. WEB SERVICES/WEB

- Web services technology is a key foundation of cloud computing's "as-a-service" cloud delivery model
- SOAP – "Simple" object access protocol
 - First generation web services
 - WSDL – web services description language
 - UDDI – universal description discovery and integration
 - SOAP services have their own unique interfaces
- REST – instead of defining a custom technical interface REST services are built on the use of HTTP protocol
- HTTP GET, PUT, POST, DELETE

November 9, 2021

TCSS562: Software Engineering for Cloud Computing [Fall 2021]
School of Engineering and Technology, University of Washington - Tacoma

L12.64

64

HYPertext TRANSPORT PROTOCOL (HTTP)

- An ASCII-based request/reply protocol for transferring information on the web
- HTTP request includes:
 - request method (GET, POST, etc.)
 - Uniform Resource Identifier (URI)
 - HTTP protocol version understood by the client
 - headers—extra info regarding transfer request
- HTTP response from server
 - Protocol version & status code →
 - Response headers
 - Response body

HTTP status codes:
2xx — all is well
3xx — resource moved
4xx — access problem
5xx — server error

School of Engineering and Technology, University of Washington - Tacoma

L12.65

65

REST: REPRESENTATIONAL STATE TRANSFER

- Web services protocol
- Supersedes SOAP – Simple Object Access Protocol
- Access and manipulate web resources with a predefined set of stateless operations (known as web services)
- Requests are made to a URI
- Responses are most often in JSON, but can also be HTML, ASCII text, XML, no real limits as long as text-based
- HTTP verbs: GET, POST, PUT, DELETE, ...

REST CLIMATE SERVICES EXAMPLE

■ **USDA Lat/Long Climate Service Demo**

```
// REST/JSON
// Request climate data for Washington

{
  "parameter": [
    {
      "name": "latitude",
      "value": 47.2529
    },
    {
      "name": "longitude",
      "value": -122.4443
    }
  ]
}
```

■ Just provide a Lat/Long

70

REST - 2

- App manipulates one or more types of resources.
- Everything the app does can be characterized as some kind of operation on one or more resources.
- Frequently services are CRUD operations (create/read/update/delete)
 - Create a new resource
 - Read resource(s) matching criterion
 - Update data associated with some resource
 - Destroy a particular a resource
- Resources are often implemented as objects in OO languages

L12.71

71

REST ARCHITECTURAL ADVANTAGES

- **Performance:** component interactions can be the dominant factor in user-perceived performance and network efficiency
- **Scalability:** to support large numbers of services and interactions among them
- **Simplicity:** of the Uniform Interface
- **Modifiability:** of services to meet changing needs (even while the application is running)
- **Visibility:** of communication between services
- **Portability:** of services by redeployment
- **Reliability:** resists failure at the system level as redundancy of infrastructure is easy to ensure
