# FEEDBACK FROM 11/23

- How do we submit peer review for presentation? Do we answer all questions on template? Do we need ask a question to group members?
- Complete the MS Word document template
- Fill out the questions
- Save as PDF
- Upload to Canvas
- For extra credit (to submit extra peer reviews), upload multiple PDFs per day

November 29, 2022

L17.17

17

<u>TUTORIAL 5:</u> When copying the CreateCSV class to create ProcessCSV it is <u>Imperative</u> that the S3 PutObject call is <u>DELETED</u>!

In Tutorial 5 an EventBridge Rule is created to trigger ProcessCSV each time a PutObject event occurs on the bucket / file

If ProcessCSV generates PutObject(s) this results in a circular/endless call and will exhaust cloud credits quickly

AWS CREDITS  $\rightarrow \rightarrow \rightarrow \rightarrow \rightarrow \rightarrow \rightarrow$ 

18

Please verify there are no unusual billing issues in your account every couple of days – Click on your name in the upper right hand corner of the AWS console

Select 'Billing Dashboard'.
Check charges for services used in tutorials.

<u>Tutorial 3</u>: ec2; <u>Tutorial 4</u>: Lambda; <u>Tutorial 5</u>: Simple Storage Service, Lambda, CloudWatch, CloudTrail; <u>Tutorial 6</u>: RDS, Lambda

# TUTORIAL 4 - NOV 6 NOV 23 NOV 29

- Introduction to AWS Lambda with the Serverless Application Analytics Framework (SAAF)
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/ TCSS462\_562\_f2022\_tutorial\_4.pdf
- Obtaining a Java development environment
- Introduction to Maven build files for Java
- Create and Deploy "hello" Java AWS Lambda Function
  - Creation of API Gateway REST endpoint
- Sequential testing of "hello" AWS Lambda Function
  - API Gateway endpoint
  - AWS CLI Function invocation
- Observing SAAF profiling output
- Parallel testing of "hello" AWS Lambda Function with faas\_runner
- Performance analysis using faas\_runner reports
- Two function pipeline development task

26

# **TUTORIAL 4 - RESUBMISSION**

- For tutorial 4 submissions, several submission indicate Thread.sleep(10000) was added but the results for the question 6 do not confirm this.
- It is possible that:
- The provided results from the SAAF Report Generator were from a test run before the Thread.Sleep() statement was added to the code
  - OR -
- 2. The Thread.Sleep() statement was added in the incorrect location of the code
  - OR -
- 3. When opening the CSV output from the Report Generator, the file separator characters were set incorrectly.
- The only separator for a CSV file is the comma "," Be sure to correctly open the CSV file in the spreadsheet. Columns can be offset resulting in the wrong answers being provided for Question 6.

November 29, 2022

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2022] School of Engineering and Technology, University of Washington - Tacoma

L17.27

27

# **TUTORIAL 4 - RESUBMISSION - 2**

The sleep statement must go between the START FUNCTION and END FUNCTION comments in the handleRequest() method specified as the AWS Lambda function's handler under runtime settings in the AWS Lambda GUI.

November 29, 2022

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2022] School of Engineering and Technology, University of Washington - Tacoma

L17.28

28

# TUTORIAL 4 - RESUBMISSION - 3

- SANITY CHECK: consider that adding 10 seconds of sleep to your AWS Lambda function will cause the function to run for at least 10 seconds. This will impact the outputs requested for Question 6:
- avg\_runtime is the server-side (cloud) runtime of the function
- This is the time it takes for the function to run on AWS Lambda (cloud)
- Adding sleep of 10 seconds should increase a function's avg\_runtime
- avg\_roundTripTime is the total time for a request from a client (laptop?) to travel to the server (cloud), make the function call, and return.
- If trying to make 50 calls at once on a laptop with a small # of CPU cores this time may be slow
- Adding sleep of 10 seconds should increase a function's avg\_roundTripTime

November 29, 2022

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2022] School of Engineering and Technology, University of Washington - Tacoma

L17.29

29

# TUTORIAL 4 - RESUBMISSION - 4

avg\_cpuldleDelta time is the amount of time the Lambda function's Firecracker vCPUs are idle during the function call on the server measured in centiseconds:

> 100 centiseconds = 1 second 100 centiseconds = 1000 milliseconds

- By default, AWS Lambda functions with 512 MB run in a runtime environment with access to two vCPU cores
- This is the total vCPU idle time for both cores (it is doubled)
- Adding sleep of 10 seconds should increase your function's avg\_cpuldleDelta
- How much should <u>avg\_cpuldleDelta</u> increase?

L17.30

30

# TUTORIAL 5 - NOV 13 NOV 29

- Introduction to Lambda II: Working with Files in S3 and CloudWatch Events
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462\_562\_f2022\_tutorial\_5.pdf
- Customize the Request object (add getters/setters)
  Why do this instead of HashMap?
- Import dependencies (jar files) into project for AWS S3
- Create an S3 Bucket
- Give your Lambda function(s) permission to work with S3
- Write to the CloudWatch logs
- Use of CloudTrail to generate S3 events
- Creating CloudWatch rule to capture events from CloudTrail
- Have the CloudWatch rule trigger a target Lambda function with a static JSON input object (hard-coded filename)
- Optional: for the S3 PutObject event, dynamically extract the name of the file put to the S3 bucket for processing

L17.31

31

# TUTORIAL 6 - NOV 21 DEC 2

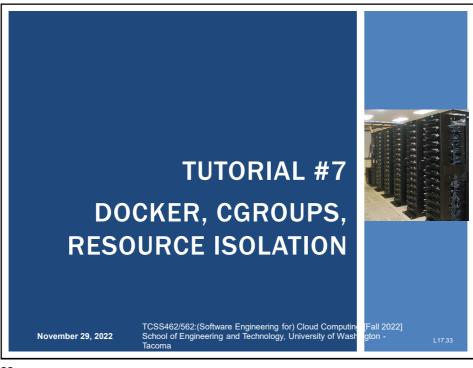

- Introduction to Lambda III: Serverless Databases
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutori als/TCSS462\_562\_f2022\_tutorial\_6.pdf
- Create and use Sqlite databases using sqlite3 tool
- Deploy Lambda function with Sqlite3 database under /tmp
- Compare in-memory vs. file-based Sqlite DBs on Lambda
- Create an Amazon Aurora "Serverless" v2 MySQL database
- Using an ec2 instance in the same VPC (Region + availability zone) connect and interact with the database using the mysql CLI app
- Deploy an AWS Lambda function that uses the MySQL "serverless" database

November 29, 2022

# TUTORIAL 7 - DEC 5

- Introduction to Docker
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutori als/TCSS462\_562\_f2022\_tutorial\_7.pdf
- Must complete using Ubuntu 22.04 (for cgroups v2)
- Use docx file for copying and pasting Docker install commands
- Installing Docker

November 29, 2022

- Creating a container using a Dockerfile
- Using cgroups virtual filesystem to monitor CPU utilization of a container

TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2022]

School of Engineering and Technology, University of Washington - Tacoma

- Persisting container images to Docker Hub image repository
- Container vertical scaling of CPU/memory resources
- Testing container CPU and memory isolation

L17.34

34

TUTORIAL COVERAGE						
■ Docker CLI → Docker Engine (dockerd) → containerd → runc						
■ Working with the docker CLI:						
docker run create a container						
docker ps -a list containers, find CONTAINER ID						
docker execit run a process in an existing container						
docker stop stop a container						
docker kill kill a container						
docker help list available commands						
man docker Docker Linux manual pages						
November 29, 2022 TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2022] School of Engineering and Technology, University of Washington - Tacoma						

```
Attach local standard input, output, and error streams to a running container Build an image from a Dockerfile Create a new image from a container's changes Copy files/folders between a container and the local filesystem Create a new container Deploy a new stack or update an existing stack Inspect changes to files or directories on a container's filesystem Get real time events from the server Run a command in a running container Export a container's filesystem as a tar archive Show the history of an image List images Inport the contents from a tarball to create a filesystem image Display system-wide information Return low-level information on Docker objects Kill one or more running containers Load an image from a tar archive or STDIN Log in to a Docker registry Log out from a Docker registry Fetch the logs of a container Pause all processes within one or more containers List port mappings or a specific mapping for the container List containers Pull an image or a repository from a registry Push an image or a repository to a registry

# PRESENTATION SCHEDULE - 2

- Tuesday December 6
- 1. Yuan Huang, Yifan Xie (is Alan Liu in this group?) (team 15)

Research paper: A Prediction based Autoscaling in Serverless Computing

2. Angela Mu, Xiaojie Li, Ruigeng Zhang (team 6)

Research paper: Apollo: Modular and Distributed Runtime System for Serverless Function Compositions on Cloud, Edge, and IoT Resources

3. Jui Wang, Jinming Yu (team 7)

Cloud Technology: AWS Rekognition

#### Thursday December 8

1. Mohammed Alshayeb (team 2)

Research paper (2021 list) Towards Federated Learning using FaaS Fabric

2. Nicole Guobadia (team 8)

Cloud Technology: AzureML (Machine Learning as a Service)

3. RamaSoumya Naraparaju, Sathwika Suddala, Chhavi Gupta (team 12)

Cloud Technology: Amazon Redshift

4. Yafei Li, Sue Yang (team 5)

Research paper: Cypress: Input size -Sensitive Container Provisioning and

Request Scheduling for Serverless

47

48

# **KUBERNETES - 2** Why does Google want to give Kubernetes away for free? Initially developed by Google Goal: make it easier for potential customers to use Google Cloud Kubernetes leverages knowledge gained from two internal container management systems developed at Google Borg and Omega Google donated Kubernetes to the Cloud Native Computing Foundation in 2014 as an open-source project Kubernetes is written in Go (Golang) • Kubernetes is available under the Apache 2.0 license Releases were previously maintained for only 8 months! Starting w/ v 1.19 (released Aug 2020) support is 1 year TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2022] November 29, 2022 School of Engineering and Technology, University of Washington - Tacoma

49

# **GOALS OF KUBERNETES**

- 1. Deploy your application
- 2. Scale it up and down dynamically according to demand
- 3. Self-heal it when things break
- 4. Perform zero-downtime rolling updates and rollbacks
- These features provide automatic infrastructure management
- Containerized applications run in container(s)
- Compared to VMs, containers are thought of as being:
  - Faster
  - More light-weight
  - More suited to rapidly evolving software requirements

117 50

School of Engineering and Technology, University of Washington - Tacoma

50

# **CLOUD NATIVE APPLICATIONS**

- Applications designed to meet modern software requirements including:
  - Auto-scaling: resources to meet demand
  - **Self-healing**: required for high availability (HA) and fault tolerance
  - Rolling software updates: with no application downtime for DevOPS
  - Portability: can run anywhere there's a Kubernetes cluster

L17.51

51

# WHAT IS A MICROSERVICES APP?

- Application consisting of many specialized parts that communicate and form a meaningful application
- Example components of a microservice eCommerce app:

Web front-end

Catalog service

Shopping cart

**Authentication service** 

Logging service

Persistent data store

- **KEY IDEAS:**
- Each microservice can be coded/maintained by different team
- Each has its own release cadence
- Each is deployed/scaled separately
- Can patch & scale the log service w/o impacting others

# **KUBERNETES - 3**

- Provides "an operating system for the cloud"
- Offers the de-facto standard platform for deploying and managing cloud-native applications
- OS: abstracts physical server, schedules processes
- Kubernetes: abstracts the cloud, schedules microservices
- Kubernetes abstracts differences between private and public clouds
- Enable cloud-native applications to be cloud agnostic
  - i.e. they don't care WHAT cloud they run on
  - Enables fluid application migration between clouds
- Kubernetes provides rich set of tools/APIs to introspect (observe and examine) your apps

## **KUBERNETES - 4**

- **■** Features:
- A "control plane" brain of the cluster
  - Implements autoscaling, rolling updates w/o downtime, self-healing
- A "bunch of nodes" workers (muscle) of the cluster
- Provides orchestration
- The process of organizing everything into a useful application
- And also keeping it running smoothly

# **KUBERNETES - CLUSTER MANAGEMENT**

- Master node(s) manage the cluster by:
  - Making scheduling decisions
  - Performing monitoring
  - Implementing changes
  - Responding to events
- Masters implement the control plane of a Kubernetes cluster
- Recipe for deploying to Kubernetes:
- Write app as independent microservices in preferred language
- Package each microservice in a container
- Create a manifest to encapsulate the definition of a Pod
- Deploy Pods to the cluster w/ a higher-level controller such as "Deployments" or "DaemonSets"

# **DECLARATIVE SERVICE APPROACH**

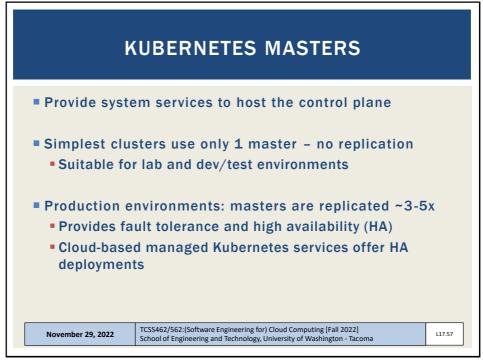

- Imperative definition: sets of commands and operations
  - Example: BASH script, Dockerfile
- **Declarative definition**: specification of a service's properties
  - What level of service it should sustain, etc.
  - Example: Kubernetes YAML files
- Kubernetes manages resources declaratively
- How apps are deployed and run are defined with YAML files
- YAML files are POSTed to Kubernetes endpoints
- Kubernetes deploys and manages applications based on declarative service requirements
- If something isn't as it should be: Kubernetes automatically tries to fix it

# TASK SCHEDULER

- Scheduler's job is to identify the best node to run a task
  - Scheduler does not actually run tasks itself
- Assigns work tasks to appropriate healthy nodes
- Implements complex logic to filter out nodes incapable of running specified task(s)
- Capable nodes are ranked
- Node with highest ranking is selected to run the task

# **ENFORCING SCHEDULING PREDICATES**

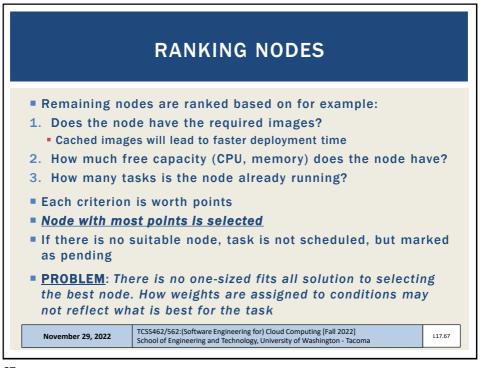

- Scheduler performs predicate (property) checks to verify how/where to run tasks
  - Is a node tainted?
  - Does task have affinity (deploy together), anti-affinity (separation) requirements?
  - Is a required network port available on the node?
  - Does node have sufficient free resources?
- Nodes incapable of running the task are eliminated as candidate hosts

# **PODS** Pod - atomic unit of deployment & scheduling in Kubernetes A Kubernetes Pod is defined to run a containerized application Kubernetes manages Pods, not individual containers Cannot run a container directly on Kubernetes All containers run through Pods Pod comes from "pod of whales" Docker logo shows a whale with containers stacked on top Whale represents the Docker engine that runs on a single host Pods encapsulate the definition of a single microservice for hosting purposes Pods can have a single container, or multiple containers if the service requires more than one TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2022] November 29, 2022 School of Engineering and Technology, University of Washington - Tacoma

81

82

# **PODS - 3**

- Pods provide a "fenced" environment to run containers
- Provide a "sandbox"
- Only tightly coupled containers are deployed with a single pod
- Best practice: decouple individual containers to separate pods
  - What is the best container composition into pods? (1:1, 1:many)

#### Scaling

- Pods are the unit of scaling
- Add and remove pods to scale up/down
- Do not add containers to a pod, add pod instances
- Pod instances can be scheduled on the same or different host

#### Atomic Operation

 Pods are either fully up and running their service (i.e. port open/exposed), or pods are down / offline

### **PODS - 4**

#### Pod Lifecycle

- An application should not be tightly bound or dependent on a specific Pod instance
- Pods are designed to fail and be replaced
- Use of service objects in Kubernetes help decouple pods to offer resiliency upon failure

#### Deployments

- Higher level controllers often used to deploy pods
- Controllers implement a controller and watch loop:
- "Deployments" offer scalability & rolling updates
- "DaemonSets" run instance of service on every cluster node
- "StatefulSets" used for stateful components
- "CronJobs" for short lived tasks that need to run at specified times

85

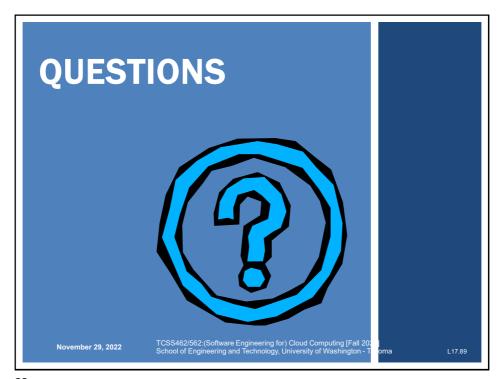

86

# **SERVICES** ■ Provide reliable front-end with: Stable DNS name IP Address Port Services do not posses application intelligence No support for application-layer host and path routing Services have a "label selector" which is a set of lables Requests/traffic is only sent to Pods with matching labels Services only send traffic to healthy Pods KEY IDEA: Services bring stable IP addresses and DNS names to unstable Pods TCSS462/562:(Software Engineering for) Cloud Computing [Fall 2022] November 29, 2022 L17.87 School of Engineering and Technology, University of Washington - Tacoma
