1

OFFICE HOURS – FALL 2022

■ Tuesdays:
■ 4:20 to 5:20 pm - CP 229

■ Fridays
■ 12:00 to 1:00 pm – ONLINE via Zoom

■ Or email for appointment

> Office Hours set based on Student Demographics survey feedback

October 20, 2022

TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.2

2

OBJECTIVES – 10/20

■ Questions from 10/18

■ Tutorials Questions

■ Tutorial 4 – Intro to FaaS – AWS Lambda

■ From: Cloud Computing Concepts, Technology & Architecture: Chapter 4: Cloud Computing Concepts and Models:

- Roles and boundaries
- Cloud characteristics
- Cloud delivery models
- Cloud deployment models

■ 2nd hour:

- TCSS 562 Term Project
- Team Planning - Breakout Rooms

October 20, 2022

TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2022]

ONLINE DAILY FEEDBACK SURVEY

■ Daily Feedback Quiz in Canvas – Take After Each Class

■ Extra Credit for completing

Assignments

Upcoming Assignments

Class Activity 1 – Implicit vs. Explicit Parallelism
Available until Oct 13 at 11:59pm | Due Oct 7 at 7:59pm | ~10 pts

Tutorial 1 - Linux
Available until Oct 19 at 11:59pm | Due Oct 13 at 11:59pm | ~20 pts

Past Assignments

TCSS 562 - Online Daily Feedback Survey - 10/5
Available until Oct 18 at 11:59pm | Due Oct 6 at 8:59pm | ~5 pts

TCSS 562 - Online Daily Feedback Survey - 9/30
Available until Oct 18 at 11:59pm | Due Oct 4 at 8:59pm | ~5 pts

October 20, 2022

TCSS 562 - Online Daily Feedback Survey - 10/5

Started: Oct 7 at 1:13am

Quiz Instructions

Question 1

0.5 pts

On a scale of 1 to 10, please classify your perspective on material covered in today's class:

1 2 3 4 5 6 7 8 9 10

Mostly Review To Me Equal New and Review Mostly New To Me

Question 2

0.5 pts

Please rate the pace of today's class:

1 2 3 4 5 6 7 8 9 10

Slow Just Right Fast

October 20, 2022

TCSS462/562: (Software Engineering for) Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.5

5

MATERIAL / PACE

■ Please classify your perspective on material covered in today's class (46 respondents):

■ 1-mostly review, 5-equal new/review, 10-mostly new

■ Average – 6.32 (↓ - previous 6.61)

■ Please rate the pace of today's class:

■ 1-slow, 5-just right, 10-fast

■ Average – 5.35 (↓ - previous 5.53)

■ Response rates:

■ TCSS 462: 24/33 – 72.7%

■ TCSS 562: 22/26 – 84.6%

October 20, 2022

6

FEEDBACK FROM 10/18

- When would we use Amdahl's law vs. scaled speedup (Gustafson's)? Why wouldn't we always use scaled speedup?
 - Amdahl's law is helpful to estimate the speedup when the size of the computer is unknown or when wanting to estimate the speed-up outside the context of a specific machine (server)
 - Scaled speedup will further refine the expected speed-up (x factor) for a specific computer/server

October 20, 2022

School of Engineering and Technology, University of Washington - Tacoma

L7.7

7

FEEDBACK - 2

- I have submitted the weather.sh last week and I just tested it that it was able to show 14 days forecast. But I heard that the 14 days forecast is only for new users who created an account in the last 30 days. Should I resubmit a 7 days forecast version?
 - Any script producing a forecast of 7 days or more is fine
- But if I resubmit it, the file name will be changed to weather - 1.sh by Canvas. Is it ok?
 - There is no problem if the file is renamed by resubmitting

TUTORIAL 2

- Introduction to Bash Scripting
- https://faculty.washington.edu/wlloyd/courses/tcss562/tutorials/TCSS462_562_f2022_tutorial_2.pdf
- Review tutorial sections:
 1. What is a BASH script?
 2. Variables
 3. Input
 4. Arithmetic
 5. If Statements
 6. Loops
 7. Functions
 8. User Interface
- Create BASH webservice client
- Call service to obtain IP address & lat/long of computer
- Call weatherbit service to obtain weather forecast for lat/long
 - → *** WEATHERBIT now limited to 7 days ***

L7.17

17

ROLES

- Cloud provider
 - Organization that provides cloud-based resources
 - Responsible for fulfilling SLAs for cloud services
 - Some cloud providers "resell" IT resources from other cloud providers
 - Example: Heroku sells PaaS services running atop of Amazon EC2
- Cloud consumers
 - Cloud users that consume cloud services
- Cloud service owner
 - Both cloud providers and cloud consumers can own cloud services
 - A cloud service owner may use a cloud provider to provide a cloud service (e.g. Heroku)

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.18

18

ROLES - 2

- Cloud resource administrator
 - Administrators provide and maintain cloud services
 - Both cloud providers and cloud consumers have administrators
- Cloud auditor
 - Third-party which conducts independent assessments of cloud environments to ensure security, privacy, and performance.
 - Provides unbiased assessments
- Cloud brokers
 - An intermediary between cloud consumers and cloud providers
 - Provides service aggregation
- Cloud carriers
 - Network and telecommunication providers which provide network connectivity between cloud consumers and providers

L7.22

22

CLOUD CHARACTERISTICS

- On-demand usage
- Ubiquitous access
- Multitenancy (resource pooling)
- Elasticity
- Measured usage
- Resiliency

Assessing these features helps measure the value offered by a given cloud service or platform

October 20, 2022

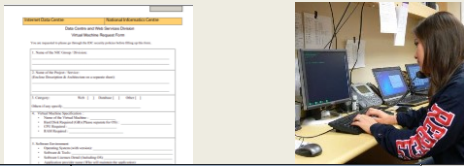

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.23

23

ON-DEMAND USAGE

- The freedom to self-provision IT resources
- Generally, with automated support
- Automated support requires no human involvement
- Automation through software services interface

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.24

24

UBIQUITOUS ACCESS

- Cloud services are widely accessible
- Public cloud: internet accessible
- Private cloud: throughout segments of a company's intranet
- 24/7 availability

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.25

25

MULTITENANCY

- Cloud providers pool resources together to share them with many users
- Serve multiple cloud service consumers
- IT resources can be dynamically assigned, reassigned based on demand
- Multitenancy can lead to performance variation

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.26

26

SINGLE TENANT MODEL

> Isolation <

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.27

27

MULTITENANT MODEL

- Resource is "multiplexed" and share amongst multiple users
- Goal is to increase utilization
- Often server resources are underutilized
- There are many "sunk costs" whether usage is 0% or 100%
- Cloud computing tries to maximize "sunk cost" investments through **multi-tenancy**

shared cloud storage device

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.28

28

MULTITENANT DATABASE

Isolated Semi-shared Shared

Tenant A Tenant A Tenant A
Tenant B Tenant B Tenant B
Tenant C Tenant C Tenant C

Separate database Shared database Shared database
E1 Separate schema Shared schema
E2 E3

- Many users on a single database instance
- What issues may occur when sharing a single database instance?**

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.29

29

MULTITENANCY OF RESOURCES

- Where is the multitenancy?
 - >> What is shared? What is isolated?

Traditional On Premise Single Tenant (Hosted) Multi-Tenant Virtual Appliance

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.30

30

RESOURCE CONTENTION
FROM MUTLI-TENANCY

- Despite best efforts at isolation, co-resident VMs on a single cloud server running identical benchmarks simultaneously do not perform equally.

From Han, X., Schooley, R., Mackenzie, D., David, O., Lloyd, W., Characterizing Public Cloud Resource Contention to Support Virtual Machine Co-residency Prediction, 2020 8th IEEE International Conference on Cloud Engineering (IC2E 2020), Apr 21-24, 2020.

Up to 48 VMs sharing same server!!

October 20, 2022

TCSS462/562:Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.31

31

RESOURCE CONTENTION
FROM MUTLI-TENANCY - 2

- Performance variation from multi-tenancy is increasing as cloud servers add more CPU cores
- Running many idle operating system instances can impose significant overhead for some workloads

From Han, X., Schooley, R., Mackenzie, D., David, O., Lloyd, W., Characterizing Public Cloud Resource Contention to Support Virtual Machine Co-residency Prediction, 2020 8th IEEE International Conference on Cloud Engineering (IC2E 2020), Apr 21-24, 2020.

Maximum potential resource contention (i.e. worst-case scenario)

October 20, 2022

TCSS462/562:Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.32

32

ELASTICITY

- Automated ability of cloud to transparently scale resources
- Scaling based on runtime conditions or pre-determined by cloud consumer or cloud provider
- Threshold based scaling
 - CPU-utilization > threshold_A, Response_time > 100ms
 - Application agnostic vs. application specific thresholds
 - Why might an application agnostic threshold be non-ideal?
- Load prediction
 - Historical models
 - Real-time trends

School of Engineering and Technology, University of Washington - Tacoma

L7.34

34

MEASURED USAGE

- Cloud platform tracks usage of IT resources
- For billing purposes
- Enables charging only for IT resources actually used
- Can be time-based (millisec, second, minute, hour, day)
 - Granularity is increasing...
- Can be throughput-based (data transfer: MB/sec, GB/sec)
- Can be resource/reservation based (vCPU/hr, GB/hr)
- Not all measurements are for billing
- Some measurements can support auto-scaling
- For example CPU utilization

L7.36

36

37

RESILIENCY

- Distributed redundancy across physical locations (regions on AWS)
- Used to improve reliability and availability of cloud-hosted applications
- Very much an engineering problem
- No "resiliency-as-a-service" for user deployed apps
- Unique characteristics of user applications make a one-size fits all service solution challenging

October 20, 2022 TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma L7.38

38

Elasticity is often provided using threshold based scaling. When can threshold based scaling (i.e. CPU utilization > 80%) under or over provision resources?

When the application is primarily I/O bound, a CPU threshold may never be met, or be met too late to scale up.

When the current resource utilization does not reflect future system demand.

When the current resource utilization (e.g. CPU) is temporarily increased as a result of external factors (i.e. resource contention from other tasks) that does not correlate to system demand.

When an application will soon complete a parallel phase, before executing a largely sequential phase

All of the above

October 24, 2016 TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma L10.38

39

When poll is active, respond at polllev.com/wesleylloyd641
Text **WESLEYLLOYD641** to 22333 once to join

The scaling threshold of "when CPU utilization > 80% scale up", is:

An application specific threshold

An application agnostic threshold

Start the presentation to see live content. For screen share software, share the entire screen. Get help at polllev.com/app

41

CLOUD COMPUTING DELIVERY MODELS

- Infrastructure-as-a-Service (IaaS)
- Platform-as-a-Service (PaaS)
- Software-as-a-Service (SaaS)

Serverless Computing:

- Function-as-a-Service (FaaS)
- Container-as-a-Service (CaaS)
- Other Delivery Models

October 20, 2022 TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma L7.42

42

CLOUD COMPUTING DELIVERY MODELS

- Infrastructure-as-a-Service (IaaS) delivery model
- Virtualization is a key-enabling technology of IaaS cloud
- Uses virtual machines to deliver cloud resources to end users

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.43

43

CLOUD COMPUTING DELIVERY MODELS

- Infrastructure-as-a-Service (IaaS) delivery model

Virtualization is key to sharing powerful servers among users by running *many* isolated private virtual computers known as virtual machines (VMs)
...VMs are the basis of cloud v1.0

October 20, 2022

School of Engineering and Technology, University of Washington - Tacoma

L7.44

44

CLOUD COMPUTING DELIVERY MODELS

- Infrastructure-as-a-Service (IaaS) delivery model

Virtual Machines are the building blocks for "Cloud Service Delivery Models"
They are the "vehicles" used to deliver compute resources to end users...
cloud 1.0

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.45

45

CLOUD DELIVERY MODELS

- What is the appropriate level of **abstraction**?
- How should applications be deployed?
 - IaaS, PaaS, SaaS, DbaaS, FaaS
- How do we ensure Quality-of-Service?
 - Performance, Availability, Responsiveness, Fault Tolerance
- How is **scalability** provided?
- As users, how do we minimize hosting costs?
 - How do we estimate hosting costs?

School of Engineering and Technology, University of Washington - Tacoma

L7.50

50

INFRASTRUCTURE-AS-A-SERVICE

- Compute resources, on demand, as-a-service
 - Generally raw "IT" resources
 - Hardware, network, containers, operating systems
- Typically provided through virtualization
- Generally, not-preconfigured
- Administrative burden is owned by cloud consumer
- Best when high-level control over environment is needed
- Scaling is generally **not** automatic...
- Resources can be managed in bundles
- AWS CloudFormation: Allows specification in JSON/YAML of cloud infrastructures

October 20, 2022

54

55

56

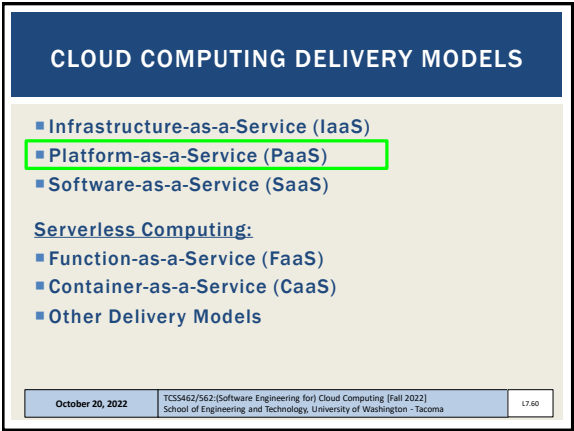

57

58

59

60

PLATFORM-AS-A-SERVICE

- Predefined, ready-to-use, hosting environment
- Infrastructure is further obscured from end user
- Scaling and load balancing may be automatically provided and automatic
- Variable to no ability to influence responsiveness

Examples:

- Google App Engine
- Heroku
- AWS Elastic Beanstalk
- AWS Lambda (FaaS)

October 20, 2022

TCSS462/562 (Software Engineering for) Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.61

61

USES FOR PAAS

- Cloud consumer
 - Wants to extend on-premise environments into the cloud for “web app” hosting
 - Wants to entirely substitute an on-premise hosting environment
 - Cloud consumer wants to become a cloud provider and deploy its own cloud services to external users
- PaaS spares IT administrative burden compared to IaaS

October 20, 2022

L7.63

63

SOFTWARE-AS-A-SERVICE

- Software applications as shared cloud service
- Nearly all server infrastructure management is abstracted away from the user
- Software is generally configurable
- SaaS can be a complete GUI/UI based environment
- Or UI-free (database-as-a-service)
- SaaS offerings
 - Google Docs
 - Office 365
 - Cloud9 Integrated Development Environment
 - Salesforce

SERVERLESS COMPUTING

Introducing Cloud 2.0

Serverless Computing

Deploy Applications Without Fiddling With Servers

67

SERVERLESS COMPUTING

How should my app withstand a server failure?

How can I tell if a server has been compromised?

How can I increase utilization of my servers?

Which OS should my servers run?

How much remaining capacity do my servers have?

How will I keep my server OS patched?

How can I control access from my servers?

How will new code be deployed to my servers?

What size server is right for my performance?

How many servers should I budget for?

When should I decide to scale up my servers?

Which packages should be baked into my server images?

How will the application handle server hardware failure?

Should I tune OS settings to optimize my application?

Which users should have access to my servers?

How many users create too much load for my servers?

When should I decide to scale out my servers?

Servers

(AAHHHHHHHHH!)

68

SERVERLESS COMPUTING

What is serverless?

Build and run applications without thinking about servers

October 20, 2022

School of Engineering and Technology, University of Washington - Tacoma

L7.70

70

SERVERLESS COMPUTING

Pay only for CPU/memory utilization

High Availability

Fault Tolerance

Infrastructure Elasticity

No Setup

Function-as-a-Service (FAAS)

71

SERVERLESS COMPUTING

Why Serverless Computing?

Many features of distributed systems, that are challenging to deliver, are provided automatically

...they are built into the platform

72

CLOUD COMPUTING DELIVERY MODELS

- Infrastructure-as-a-Service (IaaS)
- Platform-as-a-Service (PaaS)
- Software-as-a-Service (SaaS)

Serverless Computing:

- Function-as-a-Service (FaaS)
- Container-as-a-Service (CaaS)
- Other Delivery Models

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.73

73

SERVERLESS VS. FAAS

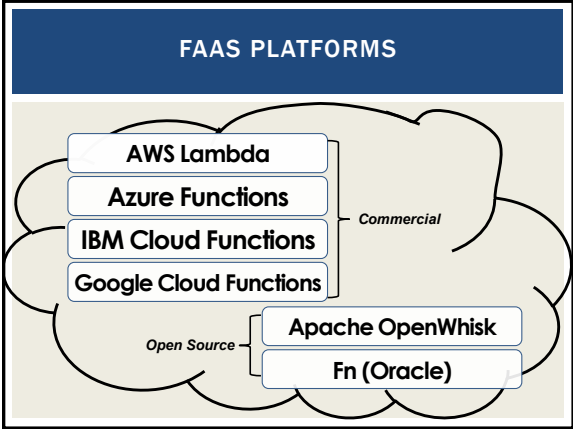

- Serverless Computing
 - Refers to the avoidance of managing servers
 - Can pertain to a number of "as-a-service" cloud offerings
 - Function-as-a-Service (FaaS)
 - Developers write small code snippets (microservices) which are deployed separately
 - Database-as-a-Service (DBaaS)
 - Container-as-a-Service (CaaS)
 - Others...
- Serverless is a buzzword
- This space is evolving...

L7.74

74

75

AWS LAMBDA

Using AWS Lambda

Bring your own code

- Node.js, Java, Python, C#
- Bring your own libraries (even native ones)

Simple resource model

- Select power rating from 128 MB to 3 GB
- CPU and network allocated proportionately

Flexible use

- Synchronous or asynchronous
- Integrated with other AWS services

Flexible authorization

- Securely grant access to resources and VPCs
- Fine-grained control for invoking your functions

Images credit: aws.amazon.com

76

FAAS PLATFORMS - 2

- New cloud platform for hosting application code
- Every cloud vendor provides their own:
 - AWS Lambda, Azure Functions, Google Cloud Functions, IBM OpenWhisk
- Similar to platform-as-a-service
- Replace opensource web container (e.g. Apache Tomcat) with abstracted vendor-provided **black-box** environment

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.77

77

FAAS PLATFORMS - 3

- Many challenging features of distributed systems are provided automatically
- Built into the platform:**
 - Highly availability (24/7)
 - Scalability
 - Fault tolerance

October 20, 2022

L7.84

FACTORS IMPACTING PERFORMANCE OF FAAS COMPUTING PLATFORMS

- Infrastructure elasticity
- Load balancing
- Provisioning variation
- Infrastructure retention: COLD vs. WARM
 - Infrastructure freeze/thaw cycle
- Memory reservation
- Service composition

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.85

85

FAAS CHALLENGES

- Vendor architectural lock-in – how to migrate?
- Pricing obfuscation – is it cost effective?
- Memory reservation – how much to reserve?
- Service composition – how to compose software?
- Infrastructure freeze/thaw cycle – how to avoid?

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.86

86

VENDOR ARCHITECTURAL LOCK-IN

- Cloud native (FaaS) software architecture requires external services/components

Example: Weather Application

The diagram illustrates a client interacting with a weather application. The client triggers a Lambda function via an API Gateway. The Lambda function depends on S3 for front-end code, API Gateway for REST API calls, and DynamoDB for local weather data. A temperature of 35°C is shown as an output. The text 'Increased dependencies → increased hosting costs' is at the bottom.

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.87

87

PRICING OBFUSCATION

- VM pricing:** hourly rental pricing, billed to nearest second is intuitive...
- FaaS pricing:**
 - AWS Lambda Pricing**
 - FREE TIER:** first 1,000,000 function calls/month → FREE
first 400,000 GB-sec/month → FREE
 - Afterwards:** \$0.0000002 per request
\$0.000000208 to rent 128MB / 100-ms

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.88

88

MEMORY RESERVATION QUESTION...

- Lambda memory reserved for functions
- UI provides “slider bar” to set function’s memory allocation
- Resource capacity (CPU, disk, network) coupled to slider bar: “every doubling of memory, doubles CPU...”
- But how much memory do model services require?

The screenshot shows the 'Basic settings' for a Lambda function. The 'Memory (MB)' is set to 128 MB. A red question mark icon is next to the 'Performance' label.

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.89

89

SERVICE COMPOSITION

- How should application code be composed for deployment to serverless computing platforms?

The diagram compares two deployment models. 'Monolithic Deployment' shows a single function with 4 internal steps. 'Server flow control' shows a function with 3 internal steps. A red question mark icon is at the bottom right.

- Recommended practice: Decompose into many microservices
- Platform limits: code + libraries ~250MB
- How does composition impact the number of function invocations, and memory utilization?

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.90

90

INFRASTRUCTURE FREEZE/THAW CYCLE

- Unused infrastructure is deprecated
 - But after how long?
- Infrastructure: VMs, “containers”
- Provider-COLD / VM-COLD**
 - “Container” images - built/transferred to VMs
- Container-COLD**
 - Image cached on VM
- Container-WARM**
 - “Container” running on VM

Performance

L7.93

93

CONTAINER-AS-A-SERVICE

- Cloud service model for deploying application containers (e.g. Docker) to the cloud
- Deploy containers without worrying about managing infrastructure:
 - Servers
 - Or container orchestration platforms
 - Container platform examples: Kubernetes, Docker swarm, Apache Mesos/Marathon, Amazon Elastic Container Service
 - Container platforms support creation of container clusters on the using cloud hosted VMs
- CaaS Examples:
 - AWS Fargate
 - Azure Container Instances
 - Google KNative

School of Engineering and Technology, University of Washington - Tacoma

L7.102

102

OTHER CLOUDS

- Federated cloud
 - Simply means to aggregate two or more clouds together
 - Hybrid is typically private-public
 - Federated can be public-public, private-private, etc.
 - Also called inter-cloud
- Virtual private cloud
 - Google and Microsoft simply call these virtual networks
 - Ability to interconnect multiple independent subnets of cloud resources together
 - Resources allocated private IPs from individual network subnets can communicate with each other (10.0.1.0/24) and (10.0.2.0/24)
 - Subnets can span multiple availability zones within an AWS region

112

AWS LAMBDA PLATFORM LIMITATIONS

- Maximum 10 GB memory per function instance
- Maximum 15-minutes execution per function instance
- 500 MB of temporary disk space for local I/O (default)
- 10 GB ephemeral storage (for additional charge)
 - <https://aws.amazon.com/blogs/aws/aws-lambda-now-supports-up-to-10-gb-ephemeral-storage/>
- Access up to 6 vCPUs depending on memory reservation size
- 1,000 concurrent function executions inside account (default)
- Function payload: 6MB (synchronous), 256KB (asynchronous)
- Deployment package: 50MB (compressed), 250MB (unzipped)
- Container image size: 10 GB
- Processes/threads: 1024
- File descriptors: 1024
- See: <https://docs.aws.amazon.com/lambda/latest/dg/gettingstarted-limits.html>

L7.117

117

APPLICATION FLOW CONTROL

- Serverless Computing:**
- AWS Lambda (FAAS: Function-as-a-Service)
- Provides HTTP/REST like web services
- Client/Server paradigm
- Synchronous web service:**
- Client calls service
- Client blocks (freezes) and waits for server to complete call
- Connection is maintained in the "OPEN" state
- Problematic if service runtime is long!
- Connections are notoriously dropped
- System timeouts reached
- Client can't do anything while waiting unless using threads

October 20, 2022

TCSS462/562: Software Engineering for Cloud Computing [Fall 2022]
School of Engineering and Technology, University of Washington - Tacoma

L7.118

118

APPLICATION FLOW CONTROL - 2

- Asynchronous web service**
- Client calls service
- Server responds to client with OK message
- Client closes connection
- Server performs the work associated with the service
- Server posts service result in an external data store
 - AWS: S3, SQS (queueing service), SNS (notification service)

PROGRAMMING LANGUAGE COMPARISON

- FaaS platforms support hosting code in multiple languages
- AWS Lambda- common: Java, Node.js, Python
 - Plus others: Go, PowerShell, C#, and Ruby
- Also Runtime API ("BASH") which allows deployment of binary executables from any programming language
- August 2020 - Our group's paper:
 - <https://tinyurl.com/y46eq6np>
- If wanting to perform a language study either:
 - Implement in C#, Ruby, or multiple versions of Java, Node.js, Python
 - OR implement different app than TLQ (ETL) data processing pipeline

October 20, 2022	TCSS462/562: Software Engineering for Cloud Computing [Fall 2022] School of Engineering and Technology, University of Washington - Tacoma	L7.121
------------------	--	--------

121

FAAS PLATFORMS

- Many commercial and open source FaaS platforms exist
- TCSS562 projects can choose to compare performance and cost implications of alternate platforms.
- Supported by SAAF:
 - AWS Lambda
 - Google Cloud Functions
 - Azure Functions
 - IBM Cloud Functions

October 20, 2022	TCSS462/562: Software Engineering for Cloud Computing [Fall 2022] School of Engineering and Technology, University of Washington - Tacoma	L7.122
------------------	--	--------

122

DATA PROVISIONING

- Consider performance and cost implications of the data-tier design for the serverless application
- Use different tools as the relational datastore to support service #2 (LOAD) and service #3 (EXTRACT)
- SQL / Relational:**
- Amazon Aurora (serverless cloud DB), Amazon RDS (cloud DB), DB on a VM (MySQL), DB inside Lambda function (SQLite, Derby)
- NO SQL / Key/Value Store:**
- Dynamo DB, MongoDB, S3

October 20, 2022	TCSS462/562: Software Engineering for Cloud Computing [Fall 2022] School of Engineering and Technology, University of Washington - Tacoma	L7.123
------------------	--	--------

123

PERFORMANCE VARIABILITY

- Cloud platforms exhibit performance variability which varies over time
- Goal of this case study is to measure performance variability (i.e. extent) for AWS Lambda services by hour, day, week to look for common patterns
- Can also examine performance variability by availability zone and region
 - Do some regions provide more stable performance?
 - Can services be switched to different regions during different times to leverage better performance?
- Remember that performance = cost
- If we make it faster, we make it cheaper...

October 20, 2022	TCSS462/562: Software Engineering for Cloud Computing [Fall 2022] School of Engineering and Technology, University of Washington - Tacoma	L7.124
------------------	--	--------

124

ELASTIC FILE SYSTEM (AWS EFS)

- Traditionally AWS Lambda functions have been limited to 500MB of storage space
- Recently the Elastic File System (EFS) has been extended to support AWS Lambda
- The Elastic File System supports the creation of a shared volume like a shared disk (or folder)
 - EFS is similar to NFS (network file share)
 - Multiple AWS Lambda functions and/or EC2 VMs can mount and share the same EFS volume
 - Provides a shared R/W disk
 - Breaks the 500MB capacity barrier on AWS Lambda
- Downside: EFS is expensive: ~30¢/GB/month**
- Project: EFS performance & scalability evaluation on Lambda**

CPUSTEAL

- CpuSteal:** Metric that measures when a CPU core is ready to execute but the physical CPU core is busy and unavailable
- Symptom of over provisioning physical servers in the cloud
- Factors which cause **CpuSteal**:
 - Physical CPU is shared by too many busy VMs
 - Hypervisor kernel is using the CPU
 - On AWS Lambda this would be the Firecracker MicroVM which is derived from the KVM hypervisor
 - VM's CPU time share <100% for 1 or more cores, and 100% is needed for a CPU intensive workload.
- Man proofs - press "/" - type "proc/stat"
 - CpuSteal is the 8th column returned
 - Metric can be read using SAAF in tutorial #4

CPUSTEAL CASE STUDY

- On AWS Lambda (or other FaaS platforms), when we run functions, how much CpuSteal do we observe?
- How does CpuSteal vary for different workloads? (e.g. functions that have different resource requirements)
- How does CpuSteal vary over time hour, day, week, location?
- How does CpuSteal relate to function performance?
