Appendix I: Chart of Chinese finals (Old Chinese to Middle Chinese)

Under each traditional rhyme group are listed the Middle Chinese (*Guǎngyùn*) rhymes in which Middle Chinese reflexes are found. Roman numerals indicate the ‘division’ of the rhymes according to their placement in rhyme tables. For those rhymes with *chóngniǔ* doublets, III-3 represents the third-division doublets and III-4 the fourth-division doublets. For convenience, words with acute initials are grouped with the III-3 doublets.

The development is given according to four systems of reconstruction: Li Fang-kuei (1971) in column 1, Gong Hwang-cherng (1997) in column 2, Baxter (1992) in column 3, and Pulleyblank (1977-78) in column 4. Since the development of vowels is often conditioned by the natural class of the initial, several cover symbols for initials are employed:

P: labials

T: dental stops, dental nasal, *l-, *r,- *j-, etc.

TS: dental sibilants

K: velars and laryngeals (non-labialized)

K^w: labiovelars and labiolaryngeals

These initials may be further grouped into larger natural classes according to common features. For example, **T** will stand for both **T** + **TS** (i.e. all acute initials) unless an explicit contrast with **TS** is noted.

We can arrange the classes of initials into complementary pairs along different dimensions:

Labialization: **PTK** vs. **K^w**

Rounding: **PK^w** vs. **TK**

Gravity: **PKK^w** vs. **T**

When a development holds true for all possible initials, **C** is used. Square brackets are placed around developments for which no examples are given, but which are either listed by the author or inferred from his reconstruction system.

Notes on individual transcriptions:

Li (1971). Since ***-rj-** always has the same effect on vocalic development as ***-j-**, finals are conventionally written with ***-j-** instead of ***-(r)j-** with no loss of information. (The presence of ***-r-** does of course influence the development of the acute initials.)

Gong (1997). This is not a complete reconstruction. Gong (1997) is concerned only with syllables involving grave initials (**K**, **K^w**, **P**) and ***r- > l-**. Thus the finals listed are only relevant for this limited set of initials. In this chart I have included only third-division reconstructions so that Gong's use of ***-rj-** can be compared with Baxter's. Note that Gong uses the same Middle Chinese notation as Li (a minor revision of Karlgren's Ancient Chinese), so I have not repeated it.

Baxter (1992). In general the *qù*-tone words in ***-ps**, ***-ks**, and ***-ts** develop like their *píng*- and *shǎng*-tone counterparts (e.g. ***-uts** like ***-uj**, ***-aks** like ***-a**) so I do not list them separately. However, the Jì 祭 group (***-ats**, ***-ets**, ***-ots**) is an exception in that it does not develop like the Gē 歌 group (***-ajs**, ***-ejs**, ***-ojs**), and is given separately. In some cases Baxter's *w*-neutralization after labials is not indicated in the charts below. In his Middle Chinese transcription Baxter only writes **-w-** after **P** if the entire rhyme is strictly *hékǒu* (Baxter uses *Qièyùn*, not *Guǎngyùn*, rhymes). So in some cases the developments shown here need to be adjusted, e.g. **PKrjut > -wit** should be interpreted to mean **Krjut > Kwit** and **Prjut > -it**.

Pulleyblank (1977-78, 1996). Pulleyblank has not as yet published a full description of his Old Chinese system. The contents of this column are mostly taken from charts in Baxter (1992), and may be incomplete.

OC gp.	MC rhyme	Li	Gong	Baxter	Pullbk.	
之 zhī	I. 哈 hāi	TKæg > -âi		TKî > -oj	áü

		尤 yóu	PK ^w jæg > -jǎu	PK ^w jæg	PK ^w jî > -juw	wàü
	IV.					

Note: Baxter argues that ***P(r)o** words rhymed with ***i** in the dialect of the *Shījīng*, but developed into Middle Chinese with other ***-(r)o** words. See the HÓU group below.

職 zhí (之入)	I. 德 dé	PTKæk > -æk		PTKîk > -ok	ák
		K ^w æk > -wæk		K ^w îk > -wok

Note: In all rhyme groups, Gong's ***-ji-** does not occur after dentals **T**. So every occurrence of ***-ji-** in the Gong's column should be replaced with ***-j-** when the initial is a dental.

Appendix II: Chart of Chinese finals (Middle Chinese from Old Chinese)

These charts are organized by *Guǎngyùn* rhyme within the traditional *shè* groupings.

Third-division rhymes are broken up into the following categories: III (for third division rhymes without chongniu distinctions: i.e. ‘pure’ third-division rhymes, or the component of a third-division rhyme with only apical initials); III-3 (for *chóngniǔ* third-division rhymes); and III-4 (for *chóngniǔ* fourth-division rhymes).

Initials are based on the distribution in the rhyme tables:

P labials (**p-**, **ph-**, **b-**, **m-**)

T dental stops and retroflex stops (**t-**, **th-**, **d-**, **n-**, **ʈ-**, **ʈh-**, **ɖ-**, **ɳ-**)

K velars and gutturals (**k-**, **kh-**, **g-**, **ŋ-**, **ʔ-**, **x-**, **ɣ-**, including **j-**)

S dental, retroflex, and palatal affricates and fricatives (**ts-**, **tʂ-**, **tʃ-**, including **ń-**, **ji-**)

L lateral l-

Note that although **ji-** is placed in division IV in the rhyme tables, it is not part of a *chóngniǔ* distinction, and is treated in this chart as a pure third-division initial.

Pulleyblank’s forms are from Pulleyblank 1991:15-6. Note that these forms are somewhat “phoneticized”, with for example the underlying pharyngeal glide **ǎ** written as **ǎ** after most vowels, and eliminated altogether after **a**. The other forms are from the same sources as indicated for Appendix I.
