Assignment 2

**Reading Assignment:** Read Chapter 3 (Perception) of Goldstein (2014).

**Computer Work:**

- Go to the Coglabs website: https://coglab.cengage.com/index.shtml
- Do the Stroop Effect experiment under the Attention heading. I only want you to do about 20 trials of the experiment so that you get an idea of which trials are difficult and which trials are easy. You can stop doing the Stroop Effect experiment before it is done.
- Do the Spatial Cueing experiment under the Attention heading. Once you have done enough trials of the Spatial Cueing experiment to get an idea of what subjects are asked to do, go to the following Catalyst questionnaire.
  * WARNING: Last year there was a bug in the Coglab program for this experiment. Each trial is supposed to start with a cue that looks like one of three forms: —, or ←→, or →→. For some reason, when I used the Firefox browser, the cue only looked like —; the arrows did not appear as arrows. When I checked the experiment a few days ago, the cues looked fine, so I think that the Coglab programmers fixed the problem. If you encounter any problems with the display of the cues, let me know.
- Go to the following Catalyst questionnaire:
  
  https://catalysttools.washington.edu/webq/survey/jmiyamot/92605
  
  Answer the questions on this questionnaire. The Catalyst webpage for this questionnaire closes at 5 pm on Monday April 11. This means that after this date and time, you will no longer be able to turn in your answers to the Catalyst questionnaire.
- When you submit your answers to this questionnaire, Catalyst will give you a confirmation code for the questionnaire. Please keep this confirmation code in your records. If there is ever any question about whether you did this assignment, this confirmation code is your proof that you completed this work.
