U.S. becomes dependent on handout of central banks

Central banks turn from US

Silting reserves to eurozone will deepen bullish stubborn in funding decision. Actions like to other undermilked collie's sake

By Chris Gerber Economic Editor

accounting for so much of our national income, the government is now relying on the central banks to keep the economy afloat. In the past, central banks have provided a safety net during economic downturns, but now they are taking on a more active role.

The central banks have been printing money at an unprecedented rate, leading to concerns about inflation. This has led to a debate about whether the central banks are doing too much or not enough.

Despite these concerns, the central banks continue to provide support to the economy. This is likely to continue in the near future, as the government continues to rely on them to keep the economy stable.

While the central banks have been successful in stabilizing the economy, they are also facing criticism for their role in the financial crisis. Some argue that the central banks contributed to the crisis by providing too much money to banks, which led to the overvaluing of assets.

As the central banks continue to provide support to the economy, it is important to consider the long-term implications of their actions. The central banks are playing a critical role in keeping the economy afloat, but they must also be careful not to contribute to more problems down the road.

In conclusion, the central banks are playing a crucial role in stabilizing the economy. However, they must be careful not to contribute to more problems down the road. It will be important to monitor their actions closely in the coming years.
